To the subscriber of American Poultry Journal who writes the best article on above subject and forwards same to American Poultry Journal before August 1, 1913, will be awarded a \$100.00 breeding pen of Single Comb White Orpingtons, direct from the yards of Louis Lee Haggin, the great White Orpington specialist. To the one sending in the second best article will be awarded a \$50.00 trio of Single Comb

White Orpingtons, direct from Mr. Haggin's yards and to the one sending in the third best article will be awarded \$40.00 worth of eggs from Mr. Haggin's best matings.

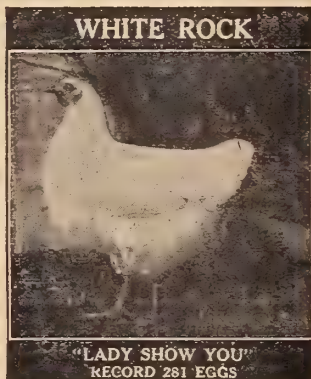

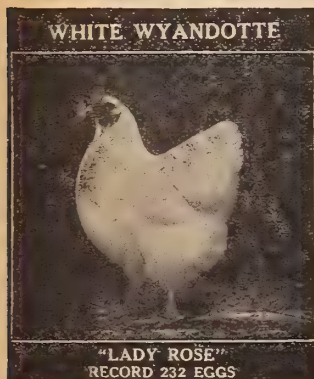

All articles to be sent to American Poultry Journal on or before August 1, 1913. This contest is open to subscribers of American Poultry Journal only.

We know there are a large number of our subscribers who are interested in this variety of fowl who are capable writers and can readily advance ten reasons why the Single Comb White Orpington is the Best Utility Fowl.

All articles must be in our hands by August 1, 1913. This gives our subscribers practically two months in which to prepare these articles.

Awards will be made by a committee of three, to be selected at a later date.

## M.F. & H. 200 EGG STRAINS M.F. & H.

THE WORLD'S BEST LAYERS

# HATCHING EGGS

From Trapnested Stock with Record of 200 Eggs or Better, 30c Each

From Trapnested Stock with Record of 144 to 199 Eggs, 20c Each

From the Same Blood Lines as Trapnested Stock, 10c Each

If you desire the best stock for egg production, it will be entirely to your interest to rely solely upon the strain, and not the breed. There are good layers and poor layers in every breed, and up to the present time the poor layers are in the majority. Our specialty is "Egg Production," and it is for this reason only that we considered "Lady Show You" worth the price we paid for her, which was \$800. We purchased other birds as well, but at no time did we purchase a bird whose best qualities were not egg production.

There are many breeders of the varieties we have, making extravagant claims concerning the egg producing qualities of their stock. There are practically none of these breeders breeding for egg production. There is but one way to breed for egg production, and that is by the continual use of the trapnest. We are now trapnesting over eight hundred birds. The only certain income that can be derived from the poultry business is eggs. You should therefore make this your objective point. There are ninety million people in this country to sell eggs to, in comparison to a mere handful who desire feathers.

We are prepared to ship your order of eggs immediately. Write for 48-page instructive catalog.

Midlothian Farms & Hatchery John G. Poorman R. 5, Tinley Park, Illinois  
Manager

Announcement of the winners will be made and first prize article published in the September issue of American Poultry Journal.

The articles must contain at least 600 words and not over 1,200. All articles must be written on one side of the paper only.

We reserve the right to retain all articles sent in for competition and publish them if we so desire, whether they win a prize or not.

This is certainly a grand opportunity for subscribers of American Poultry Journal to get a start with some of the best White Orpington blood in the country.

In making this liberal offer to our subscribers Mr. Haggin has only one object in view, and that is to create a greater interest in White Orpingtons

and to impress upon the people of this country the good qualities of this truly great variety of fowl.

#### "DREV." TO VISIT ENGLAND.

The interchange of visits between British and American fanciers goes on merrily, and we are pleased to learn that next year, if all goes well, we are to have the pleasure of welcoming Mr. J. H. Drevenstedt, who proposes to visit the Dairy and Palace. "Drev." is one of the most interesting and popular personalities in the American Fancy. He is associated with Mr. Grant M. Curtis in the editorial control of the "American Poultry World," he has judged in every corner of the United States and Canada, and he is the editor of some of those admirable breed books that are

so well known in England. At present he is working on a new library series of variety books, of which the White Wyandotte will provide the material for the first volume, and provided he can get through his engagements in time he hopes to spend a couple of months with us next fall. No one will be more heartily welcome on this side. Mr. Drevenstedt's reputation has preceded him, and we are sure fanciers will do their best to give him a pleasant time. —English Exchange.

The fancier of experience bases his matings upon the result of the breeding operations in former seasons, for which purpose he keeps a strict pedigree of his stock, and can tell in a few moments how each chicken is bred, and what every old bird has produced.

# BABY CHICKS

From Trapnested Stock with Records of 200 Eggs or Better, 50c Each

From Trapnested Stock with Records of 144 to 199 Eggs, 35c Each

From the Same Blood Lines as Trapnested Stock, 20c Each

What applies to hatching eggs; also applies to baby chicks. The baby chick season is now at its height; and we are making prompt shipments to our customers throughout the country. You will save time by ordering direct from this advertisement, either by letter or telegram. You may telegraph us your order, and remit by mail. We will book your order received by telegram, and be prepared to make shipment upon receipt of your letter.

If you are to build up a profitable poultry business; it will never be accomplished by purchasing baby chicks from stock promiscuously bred. We are shipping repeat orders to very many of our customers. Our chicks are strong and active, and are the kind that will grow and give satisfaction. For this our customers will vouch.

If you are in need of new blood, we can not only supply your requirements, but can give you the blood lines that will greatly improve the laying qualities of your flock. A successful start, with good layers, will always result profitably. We have made this start possible for you. Kindly write for our forty-eight-page catalogue which describes the most profitable egg producing farm in the world. Please mention American Poultry Journal.

## MISSTATEMENTS ABOUT THE CAMPINES.

IN the American Poultry Journal, April issue, appeared an article entitled "Belgian Campines." This article being signed by one who claims to be a breeder of Belgian Campines.

The writer of this article very evidently is not thoroughly posted as to the Belgian birds as he makes the statement in referring to the Belgian birds that "There is not a particle of difference between the Campine and the Braekel, including type, size, color and weight. The only difference, if it may be called one, is in the name."

If there is not any difference between the Belgian Campine and the Belgian Braekel as claimed in his article, he may be able to explain why it is that at the 23rd International Exhibition held at Brussels, Belgium, February 1913, which exhibition was held under the high patronage of S. M. Albert, king of Belgium, there were classes made for Belgian Silver Campines and Belgian Golden Campines, also classes for Belgian Silver Braekel and Belgian Golden Braekel; also classes for English Golden Campines and English Silver Campines.

As the Belgian people recognize the difference between the Belgian Campine and the Belgian Braekel and also the English type Campine, I feel it is of little use to answer any other mistaken statements which were built upon the above.

## QUESTIONS AND ANSWERS

Questions will be answered in this department only when full name and address is signed by the writer.

Conducted by

Prince T. Woods, M. D.

### Scaly-Legged Brood Hens.

Q. What is best to put on chicks' shanks to prevent scale? Would it hurt eggs for hatching to treat for scaly leg the hen's shanks while she is sitting on the eggs?

W. E. G.

Shepherdstown, Ohio.

A. Don't set a scaly-legged hen. You can't treat her legs during the incubation period without injury to the eggs. To prevent scaly legs in chicks, keep them away from all scaly-legged adult fowl. The disease is a parasitic one and may be spread from one infested bird to the whole flock. Chicks will not have scaly leg unless they run with other birds which have it or in unclean runs and coops that have been recently occupied by scaly-legged fowl.

### Food and Fertility.

Q. We have heard that the fertility of hatching eggs depends as much on the food as on the number of hens with the cock. Is that true? Also, what is your opinion of the following mash?

Lbs.

Corn meal .....	100
Cracked corn .....	100
Mixed feed .....	100
Middlings .....	100
Ground oats .....	120
Beef scraps .....	100
Alfalfa (cut) .....	50 or 100

We feed the mash wet, in the morning. Oats or wheat at noon and corn at night. Is that a good ration for fer-

tile eggs? We have 15 hens, R. I. Reds, with one cock, and cocks are changed every week or ten days. Should we change them oftener?

E. M. H.

Ipswich, Mass.

A. Food affects fertility only in so far as it affects the health, vigor and well-being of the individual. Your mash is more elaborate than necessary. Your ration is lacking in fresh, succulent greed food. Where high fertility is desired, feed plenty of fresh green grass, clover, rape and sprouted oats. With only 15 hens, it is not necessary to alternate males. One good male ought to take care of the flock all right. Give a variety of food with plenty of greens and keep their appetites keen. Give them an opportunity to exercise, and house them in open-front quarters.

### Wants an Ointment for Lice.

Q. Will an ointment made of lard and containing red precipitate of lead or sapodilla, applied to the skin and fluff of chickens just below the anus, kill body lice and the nits? If so, is it safe to use, and how often and what amount can be applied without its being absorbed by the fowl's system? What percentage of the drugs should be used? If neither of these poisons will prove effective in killing lice, can you suggest something that will, when applied in this manner?

A. H.

Wittenberg, Wis.

A. We would not use a red lead oint-

ment on either chicks or fowls for the purpose of killing lice and nits. Sapodilla has no value as a lice killer.

Grease of any kind will kill lice and destroy nits. Use plain lard on young chicks. Sulphur ointment or compound sulphur ointment is effective for use on adult fowl and may be used about the vent for lice and nits or for mites. It is also useful in scabies, bald head, favus, white comb, depilating mites, and scaly leg. You can make a good compound sulphur ointment as follows:

Mix 15 parts of oil of cade with 30 parts each of lard and soft soap; then add gradually and work well into the mixture 15 parts of sublimed sulphur and 10 parts of precipitated calcium carbonate.

This ointment may be applied freely in cases of scaly leg. When applying to the body, use it sparingly and apply to only a small surface at one time.

### Open-Air Incubator.

Q. The open-air incubator described in April issue appeals to me. Have you used it again this year with success? What would match this in brooding line? Is it imperative to have shade or protection in the way of trees for the "incubator," or would it work in the open if necessary?

R. J. W.

Pleasant Valley, N. Y.

A. It gave a very good hatch under trying weather conditions in April, 1913. Use small brood coops with wire runs attached, and allow 25 chicks to a

### DIRK'S RED MITE KILLER

One application kills all mites and prevents their reappearance during the season. Keeps fowls free from body lice. Makes scaly legs bright and clean. Keeps lard, pastry and sweets free from ants. Write today for special trial price.

hen. The nests should be placed in a sheltered spot, but it is not imperative to place them under evergreen trees. It can be used in the open, but it is better to provide shade during the warmest part of the day.

#### Tumor on Side of Head.

Q. I have a White Rock hen that has a swelling about the size of a hickory nut on the side of her head between the earlobe and the bill and just under her eye. It is hard and does not yield much to pressure. The eye is not affected and she is perfectly healthy in every way. I do not know what to do for her. As she is one of my best hens I do not like to lose her. What treatment do you advise? V. O.

Amber, Okla.

A. Let alone treatment will be best in this case. Careful examination of the specimen would be necessary to determine the character of the tumor. As long as it does not seem to bother her we would let it alone. Should it begin to grow rapidly we would advise you to write, describing the case, to Dr. Harvey R. Gaylord, State Institute for the Study of Malignant Disease, Buffalo, N. Y. He is interested in the study of tumors (particularly cancer) in fowls and might like to have your hen.

#### Keeping a Pedigree Record.

Q. In exhibition poultry one finds it

desirable to know the dam and sire of each individual bird in the flock. The question arises: How can this be carried on successfully? Have previously punched to distinguish the different matings; but this only gives the sire and not the dam.

Suppose A is running two matings and marks the eggs as to the pen and the individual bird that laid the egg. These eggs are set and the chicks are taken out and punch marked as soon as they hatch. Each chick is marked according to the hen that laid the particular egg. Record is taken of the markings and each mark reveals the mating, also the dam and sire. The second mating is carried on in the same way except that a different marking is used. Next year A expects to run more matings and uses birds from last year's pens. The chicks are marked as before and record made. When fall arrives A will be having the birds from last year's matings and cockerels and pullets from this year's matings that carry the same punch mark.

The only way I would remedy this would be to put a sealed leg band on the birds as soon as they approach maturity. Therefore birds from last year's matings would carry different band numbers but might carry the same punch. If record is made of the band number and of punch it would reveal identity of bird and of dam and sire. Would like to have your ideas on the subject, as I am very anxious to carry

out a pedigree of the birds I raise and sell. P. J.

Stoughton, Wis.

A. The system of identification has all been worked out by several breeders. It involves a good deal of time, work and book-keeping. From no punch marks to double punch marks on both feet you can get sixteen combinations for identification. Makers of leg bands will supply bands for all ages of chicks and for fowls, with letters and numbers to suit the purchaser who orders a large quantity. The bands for young stock should be made detachable so that they can be used over and over again. Trap-nests are used to identify the layer. Eggs from one hen only are hatched in the same nest. The chicks are punch marked when hatched. This suffices, if record is kept, until chicks are moved or mixed with another lot. Then each must be banded and record kept. As chicks grow the bands are changed for larger bands and record kept until adult size is reached. Then a sealed band can be used. It is all a matter of system in marking and in record keeping. Whether it is worth while or not is for you to decide.

#### Breaking Broodies—Feather Eating.

Q. (1) Last July 4th I received 34 day-old chicks and I raised them all. Had 17 pullets and did not expect them to start laying before February. One started to lay in December and they kept right on starting in one after the

Economy Trap-Nest

other until January 20. Up to 20th of January they averaged 2 eggs a week each and from then on they averaged about 5 eggs a week each. I killed one pullet and in March the rest began to get broody. I broke them up by putting them in a pen with two cockerels and it worked all right at first. Then I was told to tie their legs together and leave them on the floor. I did this with one and the other hens picked her abdomen all to pieces before I discovered it.

A. That is a very poor way to try to break up broodies. Leaving a bird bound and helpless in the pen with the others is almost certain to start trouble. To break broodies provide a slat bottomed coop hung up from the center so it will swing. Put the broody bird in this the first night you find her on the nest. Water her but do not feed. Keep her confined three days and you will find that she has lost interest in sitting.

Q. (2) My White Orpingtons pick the feathers out of each other and eat them. Some hens in another flock cared for in the same way do not do it. What can I do to stop it?

A. (2) Feather eating once started is difficult to stop without killing the bird. Give them liberal range and keep

them busy and they may get over it. Feeding an abundance of fresh greens helps. Sometimes hanging a salt codfish in the pen for them to pick at will check feather pulling.

Q. (3) I wish to build a poultry house 215 feet long that will be 20 feet wide, 7 feet high at front and 5 feet at rear. House will face the south and have a feed room in the middle. Each wing is to be 20x100 feet for accommodation of 500 fowls. Every ten feet will run out a partition eight feet from the back to form a roosting pocket and make these tight to stop drafts. Will have a gable roof and will ceil overhead with 6-inch boards placed 3 inches apart and in space above these will pack straw. Expect this to take up all moisture and keep house dry in frosty weather. Will have windows every 12 feet of front, each 4x5 feet, of 8x10-inch glass. Would it do to leave out a row of glass in center of each window and cover with cotton or burlap?

A. (3) We would prefer to build one of the popular types of open front houses, even in your location, and would have a solid partition every 20 feet with a 9-foot partition 10 feet from each solid one. Believe the Woods type of open house would suit you best. See

book "Open Air Poultry Houses for All Climates," obtainable of our book department. If we were building a house such as you describe would leave out half of glass in each window and replace with fine wire netting. Would have a solid partition every 20 feet.

Q. (4) By keeping 500 pullets in one flock will I get a 50 per cent egg yield by proper feeding and care?

A. (4) Not throughout the season. During heavy laying period you ought to considerably better that percentage. If you get a 30 per cent yield in fall and early winter you will be doing very well.

Q. (5) How much do you figure it costs to feed a hen? It costs me 12 cents a month per bird for my 17 pullets.

A. (5) Cost varies with the location and cost of supplies. Range is usually from \$1 to \$2 per hen per year.

Q. (6) I would like to know how to build your battery of 10 nests for sitters or open-air incubator.

A. (6) The directions for building and illustrations showing construction were given in April A. P. J., pages 679-9.

Q. (7) Do you find hen hatched chicks stronger than incubator chicks?

## ORPINGTON FOWLS AND DUCKS

Winner at Grand Central Palace

Winners at Madison Square and Grand Central Palace, N. Y. My birds are all descendants from prize winners, and my recent "victories" at these two most prominent shows in America should convince you that I have "quality" that will please you. A few special bargains in trios and pens at this time.

ON 11 BIRDS SHOWN AT THE PALACE 10 WERE IN THE MONEY

ON 14 BIRDS SHOWN AT THE GARDEN 7 WERE IN THE MONEY

These prize winners are all in my yards and are mated for the egg trade. Plenty of grand pens to select from. Superb matings, \$5.00 to \$15.00 per 15. Excellent quality for the price.

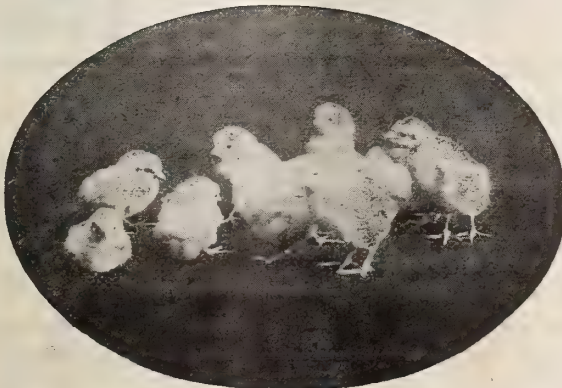

### Buff Orpington Ducks

Madison Square winners. I won 1st pen, 2d young drake, 2d young duck and 3d pen Grand Central Palace. I have as fine a flock of these most wonderful layers and money makers as can be found anywhere. Having a flowing stream insures my duck eggs being fertile. Duck eggs only \$3 to \$5 per 11. Write for prices on Baby Chicks. Catalog and mating list free.

F. B. CRAWFORD BOX 115-A RAHWAY, NEW JERSEY

## 300,000 CHICKS FOR JUNE DELIVERY

LARGEST BABY CHICK HATCHERY IN AMERICA

We have been baby chick specialists for thirteen years, and hatch day-old chicks from strictly first-class show and utility stock.

We furnish twenty standard varieties, but hatch the largest number of White and Brown Leghorns, Barred Rocks, White and Buff Orpingtons, Rhode Island Reds and White Wyandottes.

### 300,000 Chicks for June Delivery

These will go at greatly reduced prices that you can not afford to miss. Be sure to let us know your wants and write for our free catalogue.

M. Uhl & Co., New Washington, O.

I have an incubator that was made over here but never had any success with it.  
S. F.

Canada.

A. (7) We are not prepared to say that a properly hatched incubator chick differs materially from a properly hatched hen-hatched chick. There are however a lot of artificially hatched chicks that are poorly hatched and some natural method chicks that are poor ones. We have hatched and brooded a good many incubator chicks that we could not tell from hen hatched chicks when grown. In the long run, however, we think we note some slight loss in the breeding birds after several generations of artificial hatching and for that reason like to have a supply of hen hatched breeding fowl. This is a matter that several experiment stations might well devote a number of seasons to. One great difficulty is that mighty few people are sufficiently expert to produce a regular supply of well hatched incubator chicks.

Last year we took a lot of eggs that we knew were giving fine results to a

certain custom hatchery. The chicks we got were not worth attempting to rear. They were spoiled during incubation. Other eggs of the same sort from the same flocks in the hands of another incubator operator gave exceptionally fine chicks that thrived and grew wonderfully. The same sort of eggs under hens gave uniformly good results and good chicks and made some of the best mature specimens. It isn't all in the egg and there are a lot of things during incubation that may make or mar the chick. We believe that the mother hen, when allowed her own way, knows a lot more about how hatching should be done than we are ever likely to know. We have a friend who successfully custom hatches thousands of incubator chicks each year. He has been at it fifteen years, has always been a very successful incubator operator and has had exceptional results the past three years. He told us recently that if he could repeat his results of past three years the present season he should begin to think that he had learned something about artificial incubation. Please

note that he said "begin to think." He isn't satisfied yet that he has the "know how." Mighty few men would be willing to give as much time, hard work and long hours to incubating as he does. He still has the enthusiasm of a beginner and when the chicks are popping out he can't keep out of the cellar and says he finds it as great sport and excitement as many men find in a day's good hunting. Maybe that will give a cue to his secret, if he has one.

#### Bacterial Enteritis Probably.

Q. Kindly advise what I can do for a chicken which has the following symptoms: I occasionally lose a hen, the first appearance of anything being wrong is drowsiness, loss of appetite, then the comb will begin to get pale from the point down until the entire comb looks lifeless. The droppings are usually dark green, almost black color, and but little white. The small amount which the hen eats seems to stay in the crop. The bird loses flesh rapidly and seems to waste away. Will stand around quietly most of the time. Keeps on

## CAMPINES

Silver Campines, imported stock, carefully selected and mated by an expert for exhibition stock. Winners assured. Eggs, \$10 per 15.  
J. G. ZIMMER FORT WAYNE, INDIANA

## BRUCE'S ORPINGTONS

**BLACKS, WHITES AND BUFFS -- BIRDS OF QUALITY**

Are winners wherever shown. Line-bred from the best blood in America and England. Deep, wide-bodied birds of correct color, and the price fits your pocketbook. Our \$25 pens represent twice the value usually given. So do our \$5 and \$10 male birds. Our eggs for hatching at \$3 per setting, \$15 per 100, or \$5 per setting, \$25 per 100—fertility guaranteed—are the equal of any at three times their cost. Why pay more? Birds imported for special customers. Write immediately for free catalogue.

BRUCE POULTRY AND STOCK FARM, Telephone 740-R, LYNBROOK, L. I., NEW YORK

# Barred Plymouth Rocks

The "Hoosier Strain" Barred Plymouth Rocks scored another sweeping victory at the Big Cincinnati, Ohio, show Jan. 23-29, 1913, winning best display, five silver cups, gold special for champion male, etc. We had twice as many points for best display as any competitor. This phenomenal winning added to our record of first cock at Chicago, Dec. 1911, second and third cocks and fifth pullet mated pen Chicago, Dec., 1912, five first and four second prizes at Indianapolis in 1912, is final proof that there is no better strain. Eggs for Hatching: Our pens are the best we ever mated and contain more National Show winners than the same number of pens owned by any other breeder in America and will produce the winners for next season's big shows. Prices for Eggs, \$1.50, \$5 and \$10 for 15. A few choice breeding birds for sale. Send for mating list.

**G. Earl Hoover :: Route 24 :: Matthews, Indiana**

# CHAMPION BUFF WYANDOTTES

**(America's Great General Purpose Fowl)**

AS TO QUALITY—Champion Buff Wyandottes won 30 out of a possible 32 first prizes at Chicago, Indianapolis, Nashville, Cincinnati, Hamilton, during 1912.

AS TO PRODUCTIVENESS—Champion Buff Wyandottes averaged 22 eggs per hen during the month of March, 1913.

If you want to win the blue ribbons next winter, or if you would like your egg basket full during the entire year, raise Champion Buff Wyandottes, America's great general purpose fowl.

Every bird and every egg we sell is fully guaranteed. You can't lose if you raise Champion Buff Wyandottes.

**Besuden Bros. : R. W. Sturtevant, Manager : P. O. Box 359B, Cincinnati, Ohio**

getting from bad to worse until appetite is absolutely gone and the bird dies. On cutting open I find the contents of the intestines are almost black. The gizzard is almost empty and shrunken to about one-third of its normal size. I have never been able to cure a fowl so affected and only lose one in the course of three or four months. Have lost four in the past year at different intervals. If you can give me a remedy and state name of disease, will appreciate it.

L. D. T.

Evanston, Ill.

A. Diseases of this sort are difficult to diagnose from report like above. It is undoubtedly an infectious disease. Probably bacterial enteritis, but possibly one of several other infectious diseases which have been confused with it and are not very well known. Foul ground in coops and runs is most probable cause and it is likely that only susceptible birds that are somewhat out of condition are the ones to become infected. In connection with this case look up also "fowl typhoid" and "infectious leukaemia." All of these diseases are so called "filth diseases" and are usually the result of uncleanly conditions of runs and buildings, particularly old earth floors which have not

been thoroughly cleaned out in a long time. In course of several seasons an earth floor becomes contaminated to a considerable depth. Each season some six to eight inches of top earth should be removed and replaced with new soil, first drenching the bed earth with a good disinfectant.

Treatment in cases like above is seldom satisfactory, as bird is usually too far gone, when noted, to make a good recovery. Prevent the disease by good care and management and don't waste time attempting treatment. If you will attempt treatment try a good intestinal antiseptic like Abbott's combined sulphocarbolates in tablet form. Feed stimulating and easily digested soft food while under treatment.

#### Chicks With Sore Heads—Leg Weakness.

Q. (1) Chicks get sore heads. First a swelling around the eye. Then after a while matter in the eye. Eyes are closed and lids stick together so that they cannot see to eat and they die of starvation.

A. (1) This is an infectious disease more common in tropical or semi-tropical climates than in temperate ones. See that the interiors of all brood coops

are well sunned and aired daily. Keep coops and runs clean and use disinfectants freely. Keep chicks in good condition by good care, a liberal supply of wholesome food and abundant greens. When trouble is first noticed bathe eyes, mouths and nostrils in a solution of one teaspoonful of creolin (or any good cresol disinfectant) in a quart of soft lukewarm water. Be sure to open the gummed eyelids. Treatment is best given by dipping the bird's head with its mouth held open. When case is not discovered until there is pus in eyes, first wash eyes and lids with lukewarm water and then drop into the eyes a few drops of a 25 per cent solution of argyrol or a 5 per cent solution of protargol. Use freshly prepared solution.

Q. (2) Chicks about a week old lose the use of their legs and are not able to move around. If penned up for a week or so they seem to get all right again. I first thought it was on account of the wet weather, but find that it cannot be that, as we have had no rain for some months.

W. J. P.

Honokaa, Hawaii.

A. (2) Commonly leg weakness is the result of too close confinement, too heavy graining and not enough greens. It may result from any errors in diet

**PARTRIDGE PLYMOUTH ROCKS**

### A Strain with a Reputation and Quality For Those Who Want the Best

My twenty-page, handsome mating list, with colored cut, pricing eggs for hatching from twenty pens, will surprise you in elegance and prices of stock and eggs. It is mailed free to those who are seeking the best breed of the times, the best treatment, and reliable stock and eggs. My customers report winners, from my last season's eggs, all over the country. If you want to get in this class buy eggs or stock from Perkins.

My handsome thirty-six-page catalog and text book containing useful information, a colored cut of a pair of Perkins' Partridge Plymouth Rocks, mailed on receipt of twenty-five cents. It is worth the money.

You are losing time if you do not take up the Partridge Rocks. Will be glad to serve you.

**F. N. Perkins : 22 Harlem Ave. : Freeport, Ill.**

and resulting indigestion and from eating anything that causes intestinal irritation. If your chicks recover when penned and have the trouble when on range, you ought to be able to discover the cause by careful observation of the flock. When you find the cause, remove it. The first step in treatment of any ailment should be to locate the cause and then remove it if possible.

#### Report of Three Small Flocks.

Mr. Editor:

I noticed in March A. P. J. your article, "Will Small Flocks Lay Better Than Large Ones?" I have tried with flocks of 6, 12 and 25 in separate pens,

as I have just started on a small scale. I have R. C. Rhode Island Reds, and I don't think there is anything better. Here is egg record for January and February:

Pen 1—Six birds; January, 110 eggs; February, 121 eggs.

Pen 2—Twelve birds; January, 216 eggs; February, 233 eggs.

Pen 3—Twenty-five birds; January, 344 eggs; February, 373 eggs.

These birds are all cared for the same way. I feed a dry mash in hoppers and grain in litter. They have plenty of grit, charcoal and ground oyster shells. There are no floors in my coops. Litter is about 7 inches deep, of clover hay and oat straw. This is cleaned out once a week. The coop is partly open to the south. There is plenty of good light, fresh air and sunshine. My birds do not get out after cold weather sets in until warm weather comes again. Have no frozen combs or wattles. C. W. Miller.

Bridgeport, Conn.

(Thanks for the report. We would be pleased to have a full year report of these flocks, with a statement concerning the age and condition of the birds in each flock at the beginning of the year, also their general condition throughout the year and the amount of house space allowed each flock. Other things being equal, we would not look for any great difference in production between flocks of 6, 12 and 25 hens, respectively. This two months' report does not indicate any reason for the difference in yield between the first two pens and pen 3, yet the reason would undoubtedly be apparent to an experienced observer who had an opportunity to view the flocks and learn more about them. Taking the season through, we have not found any material difference in the laying of such flocks.—Ed.)

#### Puzzled with "Feeding Problem."

Q. I always find many helpful answers to poultrymen's problems in your Questions and Answers Department, and now I wish you would kindly answer one for me. The feeding problem puzzles me most. In the morning I feed equal parts of wheat and oats thrown in about a foot of litter. At noon I feed table scraps, and at night I feed cracked corn and a few oats. They have oyster shells, grit and charcoal and meat scraps always before them. They are all bred from good layers, no breeder laying less than 170 eggs her pullet year, and on this ration, in an open front, well cleaned house, they have averaged less than a 25 per cent yield this year. They are free from lice. I feed plenty, and cannot understand why they do not lay better. I am also having trouble with the hens getting "dumpy" every few days. I give them a dose of stock tonic and they are all right the next day, but get just as bad again in a few days. I would greatly appreciate helpful information. P. D. M.

Cadillac, Mich.

A. Would either get some new stock or would (if necessary) get some vigorous males of same variety, unrelated to your fowls, and mate them to the most vigorous hens to grow layers for another season. To eliminate the "feeding problem," provide a good 20-quart automatic feeder for each fifteen birds in the flock. Generally two feeders in a pen will give better results than one. Fill one feeder with cracked corn and

the other with oats and wheat. Place a hopper of "mixed feed" (a mixture of bran and middlings) where they can have free access to it. Keep beef scrap, oyster shells, grit and charcoal and water where they can have access to it at all times. Feed the table scraps at noon, but don't overdo it. Give fresh green food daily, all they will clean up. A daily supply of sprouted oats will help.

Your birds get dumpy from indigestion. Probably you will find the cause in the table waste or in the lack of fresh raw greens. Birds that are out of condition from careless or from fussy feeding won't lay well. Continuous close breeding from exceptional layers frequently yields more indifferent layers than good ones in the long run. It is well to have both males and females out of good laying stock, but the prime requisites in breeders are health, vigor and vitality. Get these three, and you will get eggs.

#### Had Frost in Muslin-Front House.

Q. (1) I am new at the chicken business, never having seen a baby chick until last spring. I have Barred Rocks and have 7 pullets that all winter laid on an average 3 eggs per day, which had everyone stopped around here. I raised them by the Philo system and did not lose one. I do not keep them in a Philo coop, but have an 8x12 ft. house, 7 ft. high in front and 5 ft. high at back. Front faces south and is all open except for a muslin screen. There is no glass in the house. Now I find on cold mornings there is a heavy frost on inside of house which melts through the day and leaves house walls and litter damp. I have not had a bit of sickness and all of the flock seem strong and healthy. Do you think I ought to have any glass in this house?

A. (1) You do not need any glass in the front. If you do away with the muslin screen and substitute quarter-inch mesh wire screen for a three feet high opening in the width of the front, and leave it open, we believe you will not have any further trouble with the dampness and frost during cold weather.

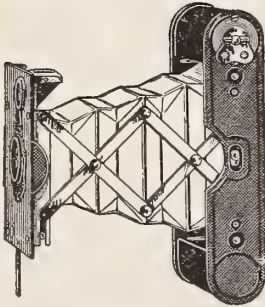

Q. (2) The old hen that hatched my chickens stopped laying July 20th and never laid again until Christmas day, and has not laid since. She is not two years old until this June. She has the same care as the others, but never goes on nest at all. I am anxious to make a success of this business, and if you can tell me what is wrong with the coop and what kind of persuasion will put the old hen on the job, I will greatly appreciate it. R. C. B. C.

Schenectady, N. Y.

A. (2) The best thing to do with that hen is to make a pot pie out of her. She is not likely to ever do much more in the laying line. You might coax a few eggs out of her by feeding an abundance of greens and meat in addition to the grain ration, but it is hardly worth while. She should be fat and in good eating condition, and her best specialty can be turned to good account by the cook.

## The Vest Pocket KODAK

is a miniature in size—actually small enough to go into a vest or hip pocket—but a thoroughly capable, durable, practical and efficient photographic outfit.

A Kodak on the farm, not only means fun for the young folks, but has an every-day, practical usefulness as well. Tells the story of crops, new buildings under way—stock and poultry for sale, etc., better than any description.

And the Vest Pocket answers every outdoor need to perfection.

The size makes it as convenient to carry as a pocket knife or watch—the fine quality of the meniscus achromatic lens gives you pictures (size  $1\frac{1}{8} \times 2\frac{1}{2}$  inches) of splendid definition and as full of detail as the largest.

The Vest Pocket Kodak is made simple and strong—nothing to get out of order—is always ready for use, has a fixed focus—brilliant, reversible finder—Auto-time Scale—loads and unloads in daylight with Kodak film cartridge for eight exposures—lustrous black metal finish. Right as a watch in adjustment and the refinement of every detail.

Catalogue Free at your dealers or by mail.

## A FEW THINGS.

**I** CALLED ATTENTION to the title of Milo Hastings' book, "The Dollar Hen," as showing candor in forecasting profits, in contrast to the extravagant figures often claimed.

In the temperate zone, in spite of high cost of equipment, over a dollar will be made per bird per year, if management is good. Under fair to middling management, it will be close to a dollar, and so in round numbers, I have always said, "one hundred hens, one hundred dollars," for curiously, it has not varied very much for over forty years, except in very remote districts. In the Arkansas Ozarks, forty-five miles from nearest railroad, and accessible only by difficult mountain roads, I have seen six dozen fresh eggs sell for 25 cents. In Texas, ninety miles from railroad, but roads not difficult, eggs have sometimes sold seven dozen for 25 cents. Soon, however, railroads will gridiron the state. The way it has been for over a generation, the frontiers excepted, when and where grain was high, eggs were high, hence matters were broad as they were long. There seems to be no reason why the dollar-hen proverb will not also prove out in the future, almost everywhere. But

### Not at Our House,

for I want none of this average dollar business, but must have the average, including all ages, considerably under a dollar. Ninety cents may be about right, or perhaps even less.

It is this way: At the effete and unfortunate North, where buildings cost like the dickens, common estimate is probably right in calling it unprofitable

to keep hens of the non-sitting breeds, for laying purposes, longer than through their second laying season. But here, where equipment for one layer costs, exclusive of land, ten cents, against one or two dollars at the north and west, where the labor of attendance is also much less, it is sure to turn out to be profitable to keep the main laying strain through three laying seasons and possibly even four.

If the first season the profit is, say, \$1.50, and the next \$1, the average would be \$1.25. If kept another season at a profit of 80 cents, the average would be \$1.10. Were it possible in a salubrious climate, with fresh air day and night at all seasons (and perhaps the extra pains of removing the dead-beats by some quick and easy method), to keep some of the birds through even a fourth season at 50 cents profit, the average would be 95 cents.

The field is very new here, and the laborers few. Nobody can tell up to what age it will pay to keep layers here till somebody gets careful statistics of the matter, and that is a work of years. It is a question of great importance, and concerns every citizen of the commonwealth, whether a poultry-keeper or not.

It is in just such cases as this that the help of the

### State Station

becomes necessary. Here, the realm being so extensive and conditions consequently so varied, there should be sub-stations. One at Southwest Texas could work to great advantage on a number of important local poultry problems. Compared with station work, it

is sheer waste of time for individuals to carry on separately experiments that few persons will ever hear of when all is said and done, and which, if heard of, would be clouded by the suspicion that the experiments were not rigid enough. Few persons know how to properly guard against errors in such experimenting, and, worse and more of it, nearly always a private party has something to sell in the line of his experiments. In such case, in poultry, seeds, nursery stock, or anything else, experience has proved that the huckster element is often not to be trusted.

\* \* \*

As regards trap-nesting for selecting breeders, it is obvious that, though no pains can be too great at a state station, the commercial poultryman will always be inclined to shun the machines on account of the time they devour.

Especially where the object is culling out the poor laying stock for the butcher, the trap-nest may take so much time that, under semi-tropical auspices, where, by labor-saving contraptions, one hand can take care of an enormous number of fowls, it might pay better to employ the same time in keeping additional numbers and going right ahead with poor layers and all. In other words, 2,000 layers, culled carefully and every one good, might be very fine, and all that, and make a record to brag about in speeches at poultry society meetings and in print, but 3,000 layers; good and bad, might give bigger profits, the income from the increased number embracing many good ones serving to pay the board of the dead-beats and a

### USUAL JUNE DISCOUNT

of 50 per cent will be again given on all orders for eggs. Beginning June 1st, 1913, baby chicks may be secured at a discount of 33 1/3 per cent. Orders for delivery after the above dates may be booked at any time. 'Tis best, however, to **do it now!** Write today for our handsome 1913 catalog and mating list. Mention American Poultry Journal when writing.

**Maple Farm of Midlothian, Box 105, Tinley Park, Illinois**  
Charles D. Ettinger, Proprietor      Walter A. Cook, Manager

profit on top of that. It is all a question of mathematics.

A Little Gumption

may enable a breeder to test out poor layers with very little labor, without using trap-nests. Suppose you have a large Rancocas flock, all laying at the racks where nests, consisting of orange boxes with entrance on one side for the hens, are placed, on the waist-high plan, in two tiers. It will be easy to have a flap of burlap, or some cheap cloth or other, tacked to the side of nest box over the top of the entrance and hanging just low enough so as to slightly graze the neck and tail of a layer, and yet not quite low enough to deter her from entering. She likes such a flap because it spells privacy, and congratulates herself on being such a successful sneak.

Well, now suppose your one thousand fowls in a flock are of an age such as

to make you question whether you better turn them off soon. Only a few are laying, for it is early in the season. At some time or other during the next two months all that are worth keeping another year will be laying. You want to find those who were late in moulting or unthrifty and therefore slow to begin laying. There will be some drones that never will lay, but are fat and fit for market. The price of old hens will be away up in two months, because people hate to send hens to market at the height of the laying season, and the new crop of chicks will not be old enough to sell except in a few cases.

To trap one thousand birds for such a purpose as this would take too much time, even were your nests all fitted for the method. To tack curtains on every nest would, however, not be a very formidable task. Your breed may be supposed to be white, but if of some other color, you vary the plan accord-

ingly. Every fortnight, on two consecutive mornings, go the rounds and touch the lower edge of the curtains lightly with black paint. Very little will do.

The object in trying two mornings in succession is to be sure and mark the every other day layers. The second month you may change the color to blue, and soon your walking and flying tally sheet will be quite instructive, for it will show some birds with two colors, some with one, and some with none, thus telling you which birds began laying earliest, which later, and which not at all.

You don't want your birds "disfigured that way," you say. Well, I appreciate the objection, but commercial poultry business is not for frills, but "mun." You must stand long enough to compensate for your sufferings, watching and gloating over younger flocks with their unsullied plumage and combs brilliant with the health-hue that comes from the exclusive out-of-door life.

Even in selecting stock for breeding, it is doubtful whether the commercial farm will ordinarily monkey with trap-nests very much. His slogan should be vigor—vigor, first, last and always—and to select from a crowd, seemingly alike, the birds just a little more alert than their fellows, needs all the time he can spare, and then some. It also needs ability coming only from special practice.

In the long run, even if vigor is the sole basis of selection, it is extremely probably that the desired heavy laying will take care of itself. What I mean is that heavy laying will be obtained as is desirable. It is often claimed that, as the phenomenal layers, like Lady Showyou, are sometimes models of strength, therefore high fecundity and strength cannot be incompatible. But though strength may promote high laying in the individual, it may not be true that high laying promotes strength in the progeny of that individual. There is some testimony tending to prove that it promotes weakness.

Am inclined to think that the commercial man, after getting together a batch of vigorous pullets, would do best to himself by not trying to cull out the most fecund, which would take a year, but simply reject, by the "curtain method," just described, the pullets that are the latest in the flock to begin laying.

Of course, the flock should all be of the same age, and what is very important, all should have been so fed all their lives as to have every tissue of their bodies well nourished, and under such circumstances those birds which lag behind the others in beginning to lay will almost always be the poorest layers all their lives. With the precaution of rejecting these, breeding only from vigorous birds will keep the rate of laying of the whole ranch not far from right.

When asked how I make the cost of equipment for layers, aside from land, only a dime per head, in the home of the houseless hennery I figure as follows, to-wit: Perch and proportion of shade boards, five cents; proportion of nest, two cents; proportion of wire fence, two cents; proportion of granary, tools and other articles for common use, one cent.

It should be in mind that quite a short fence encloses open-air perches for

BARRED PLYMOUTH  
ROCKS

210 Eggs in 259 Days

This was the official record made by one of the females in our pen at the International Egg Laying Contest at Storrs Agricultural College last year. Our five birds in this pen made a record of 836 eggs in 9 months and 11 days of actual laying. Eggs for hatching. Send for catalogue.

MAPLE GRANGE POUL. YARDS  
S. M. GOUCHER, MOORESTOWN, N.J.

many birds, that one nest answers for five or more, and that such "overhead charges" as granary, tools, baskets, pails, and dozens of small necessities are divided among thousands of fowls.

When it comes to the question of cost of land it will be generally found that the newer the region the cheaper the land, but in a new region or anywhere else it is seldom very cheap near a railroad station, and an egg farm is decidedly handicapped if very far from one. Yet an important consideration is that cheap land which spells plenty of land is very important, and if the soil makes good roads, or the country is settled enough to have the roads artificially made good, then the automobile can be employed as a wonderful distance annihilator.

\* \* \*

Apropos of the number of birds one man can attend properly, I notice that the estimates are very diverse, as well they may be since conditions vary extremely.

The eminent pioneer poultryman, W. H. Rudd, said that in the winter not over four hundred fowls could be cared for by one man, as he took care of them, while housed as he housed them, in Massachusetts.

Lately, estimates have been going the rounds of the papers ranging from one thousand to three thousand, for mature fowls only, no care of chicks being included.

Well in the Southwest, with watering out of the way because automatic, and the question simmering down mainly to feeding, egg gathering and general overlooking to detect anything amiss, if I cannot take care of ten thousand layers I will eat 'em all and swallow the fences and perches for a chaser. But packing and shipping eggs I do not include, neither raising and preparing green stuff, and the whole shooting match must be organized for labor-saving.

\* \* \*

I have spoken in these columns of the ease with which heavy crops of Egyptian wheat can be grown in the Southwest. The country seems to say: "What I like I like and will produce almost spontaneously and in rich abundance; but what I don't like I will bother you in producing till you won't try it again, on this very peculiar soil of an ancient ocean bed."

As some sort of an appetizer or flipper to digestion is good for fowls, dill can be grown for them here with surprising facility and prodigious yield of seed, and can be harvested very readily and thrown to them stalks, heads, seeds and all.

\* \* \*

Have alluded to the problem of growing Leghorn chicks with wings tucked up from first to last as snugly as the shell on a turtle's back.

Here is a lesson. Allow some broods the free run of the vegetable garden, or a large grass plot where there are no older fowls, and other broods of same sort, keep in a bare yard, and feed both lots in the same way exactly, allowing both a supposedly well balanced ration, including the proper grains, and animal and fresh vegetable food both, and everything like grit, ground bone and so on.

Notice how the tucking up biz turns out and frame for yourself the why and wherefore.

\* \* \*

If breeding from the best of both

sexes to get the best layers is not correct, there must be a lot of misguided stations, and professors who are instructing classes, and thousands on thousands of poultry keepers who make up breeding yards on the old fashioned plan. But only once get the cry started, "laying qualities are transmitted only by the male bird," and it will be echoed for a long time.

\* \* \*

I once constructed perches that, when outdoors where saving space was no object, were quite wide apart for facility in counting by moonlight or lantern light, but have given up that method. Have a narrow doorway and in the morning count them out upon the range through that. The speed they make in passing through saves time. There is greater accuracy, too, than in counting on the perches, as there are sure to be a few timid birds which will jump down, tending to mix up your census.

\* \* \*

I have been contending that fowls instinctively turn to something opposite in content, when they have eaten a proper quantity of any particular sort of food, and that eating one sort immediately starts an appetite for a contrasted sort. Now comes the May issue of Good Housekeeping, in which that superlatively excellent writer, Dr. Woods Hutchinson, says: "Lean meat not only is appetizing and stimulating in itself, but in a peculiar degree it stimulates the appetite for fats and starches as well. So that, by the addition of comparatively small amounts of lean meat much larger amounts of starches, vegetables and fats can be not only eaten with zest, but digested and well utilized in the body."

So a human being's instinct is as perfect as that of an insignificant three-day-old chicken! At the dining table no need of a boss to sing, "Whoa, Emma, a little too much lean in that last mouthful; take some fat now." Or, "Hold on there, grease up a little. You must be unctuous."

\* \* \*

Not long ago I prophesied that the time would come when Petaluma, with its wonderful twenty-five mile long line of poultry yards, would in time catch up with the enormous San Francisco demand for eggs. It would seem, quite lately, that the time has now arrived. The prices of eggs being lower than in past years, mass meetings of poulterers have been held to find out what to do about it, and the Panama Canal trade was suggested as a relief.

But they will run against a circumstance. Southwest Texas is nearer by a long bit, and has cheaper food for poultry. Raw material for eggs cheapest in the world and no end of various markets, best in the world for finished product. Largest dairy of choice cows in the world, one thousand head of fine Jerseys, only a few miles from Riviera. Separated milk for curd galore for chicks, and what do you know about that?

## Write for Your Copy of the CYPHERS Book—Free

It is *more* than a catalogue—is *educational, helpful, valuable.*

Contains 244 pages—many of them filled with *sound advice* based upon the knowledge and experience of some of the foremost poultry authorities. "Profitable Poultry and Egg Production" deserves to be called a poultry text-book. Its chapters on right methods, newest developments and proved results at the Cyphers \$75,000 Poultry and Demonstration Farm make the book well worth paying for—yet it is *free*. Also lists more than a hundred articles needed and used by progressive poultry keepers.

### Everything for Poultry Keepers

Incubators	Fattening Mash	Anti-Fly Pest	Spray Pumps
Brooders	Scratching Food	Egg Preservative	Powder Guns
Brood Coops	Fertile Egg Mash	Fumigating Candles	Wire Fencing
Chick Shelters	Laying Mash	Drinking Fountains	Bone Cutters
Brooder Stoves	Short-Cut Alfalfa	Grit and Shell Boxes	Chick Markers
Leg Bands	Mealed Alfalfa	Food & Water Holders	Bone Mills
Caponizing Sets	Full-Nest Egg Food	Pigeon Supplies	Root Cutters
Chick Food	Nodi Charcoal	Lice Powder	Nest Eggs
Developing Food	Poultry Remedies	Roost Supports	Poultry Books
Growing Mash	Napreol (Disinfectant)	Roosting Paper	Etc., Etc.

All the above are guaranteed by the Cyphers Incubator Company to give complete satisfaction or money will be refunded. *Write today* for your free copy of "Profitable Poultry and Egg Production." Please mention this paper.

Address Home Office or nearest Branch store.

### June to Mid-July.

June hatched chicks if grown where shade is plenty often make very fine specimens when matured. If you have the time, the room and the wherewithal, try a flock of June chicks this season.

\* \* \*

Right now, be careful of all mixed feeds containing cracked grains and be sure that the corn is right. This is the season when corn spoils quickly. Don't feed moldy or musty grains or cracked grains that look and smell offcolor. Spoiled corn, green-heart corn, is poison for chicks and fowls. It will kill little chicks and will quickly put adult fowls out of condition. Be sure that your feeding grains are sound, sweet, and wholesome.

\* \* \*

Be sure to provide shade, cool drinking water and an abundance of greens at this season for both young and old stock. Fresh, succulent green food is particularly important. Chickens from the shell to the frying pan require a liberal allowance of greens. With plenty of green food supplied you get better value out of the grain and meat food fed to your birds. Goose and duck growers know that you can stunt or kill both goslings and ducklings by heavy grain feeding without a sufficient supply of green food. Green food is essential to their growth and well-being. Many who grow chickens fail to supply enough greens and so fail to get best results. At this season of the year there is no excuse for keeping the flocks, young or old, short on greens. There is plenty of good food going to waste on most poultry places right now.

\* \* \*

If the signs do not fail this should prove a good clover year and a big

clover crop will be a boon to poultry keepers. Clover is good to feed green and it is good to feed when cured and cut fine. There is nothing better for litter for brooders than good cut clover and the small chicks will eat a great deal of it.

\* \* \*

Don't crowd the brooders, brood-coops, or growing houses. Crowded quarters spoil your chances of getting good growth and development. See that all sleeping quarters for chickens and fowl are well ventilated and so constructed that there will be an abundant supply of fresh air both night and day, particularly at NIGHT. A tight, close, poorly aired coop will take more out of the chicks in one night than you can put on or in them in a week.

\* \* \*

This is the season when lice and mites grow fat and multiply. Don't imagine that because the coops were empty and exposed to the elements through the cold winter weather that the mites suffered any in consequence. Unless you have used a good "killer" freely, you will find the vermin right on deck and ready to do business with the first flock you house in the infested coop.

\* \* \*

Dalmatian or Persian insect powder (pyrethrum), if fresh and pure, is one of the best means of getting rid of body lice on fowls and chicks. Work it well into feathers and down all over the bird. Use it on sitting hens when you set them and again a few days before hatching time. Rub it into the down on the chick's head to get rid of the fat head lice.

\* \* \*

For mites and other vermin about the roosts a good liquid lice killer is best.

Mites live and raise big families in the cracks and crevices of the woodwork and under neglected droppings or other filth. They multiply rapidly and must be reached to kill them. Paint the woodwork well with lice killer and spray it well into all cracks and crevices. Make a thorough job of it and repeat as often as you find mites about. We have known mites to kill a sitting hen and they will quickly put a promising brood out of the running.

\* \* \*

There are many excellent liquid lice killers on the market that will destroy mites. You can make a good one at home by dissolving in kerosene all it will take up of crude naphthalene flakes.

\* \* \*

Provide a good "dust bath" for both young and old stock. A "dust" bath to give best results should not be too dry and dusty. A bath in a sheltered spot containing rather moist fine earth will be most appreciated and will do the most good. Watch your fowls when they have the chance to pick a place for an earth bath that is entirely to their liking. You will find that moist loam suits them pretty well.

\* \* \*

One KEEP CLEAN is a lot better than many CLEAN UPS. It is a good time now to clean up, use disinfectants freely where needed, get ready for the coming warm weather and then KEEP THINGS CLEAN.

\* \* \*

When through using the eggs for hatching better take the males away from the layers. You get more satisfactory summer eggs for table use when there are no males running with the flock.

## BYERS' STRAIN ORPINGTONS

BUFF, BLACK AND PEARL WHITE

It is not possible for one breeder to own all the best birds but it is possible for him to give the best values and service when he has an established and reliable strain on a par with the best possible and in sufficient numbers to warrant the sale of the best without handicap to himself. I occupy this position in the matter of SERVICE TO YOU and I propose to maintain it because upon your perfect satisfaction depends my success. This is a straightforward proposition directed to all conservative and careful prospective purchasers of Orpingtons.

Until further notice a genuine reduction of 50 per cent on eggs and stock will be in effect. This applies to utility and special qualities alike. Catalogue is free. Communicate with me regarding an advance order for show birds to win next Fall or Winter to be delivered when wanted in perfect condition and training. A small deposit will insure reservation.

Early purchasers will secure my best values selected from hundreds of the finest birds I have ever owned.

C. S. Byers, Orpington Specialist 15 Years, Hazelrigg, Indiana

# Associations and Shows

*Secretaries are Requested to Send in News Items of Interest About Their Shows for This Department*

## A NEW ASSOCIATION IN BUFFALO.

The International Poultry Association, incorporated for five thousand dollars, under the laws of New York State, will hold its first annual exhibition at the Auditorium, Buffalo, N. Y., November 25, 26, 27, 28 and 29, 1913.

The promoters of this new poultry organization are: George Urban, Jr., H. W. Pottle, of Buffalo, N. Y.; Hon. Joseph Russell, of Toronto, and H. A. Rose, of Welland, Canada.

The officers elected for the coming year are: President, Jas. O. Moore; vice-president, H. A. Rose; treasurer, H. W. Pottle, and secretary, J. H. Drevenstedt. The board of directors will consist of nine members, with such well-known and influential business men and poultry fanciers as George Urban, Jr., Joseph Russell, L. H. Bown, Howard Forman, and others to be selected by the stockholders.

The object of the International Poultry Association is to hold in Buffalo each year a high class poultry exhibition, run on strictly business principles, where the breeders from the north, east, south and west, as well as from Canada can annually compete for the

liberal prizes to be offered by this new organization.

Furthermore, as many breeders have arrived at the conclusion that some of our winter shows are held too late in the season, and too many are crowded into one month, the management of the International Poultry Association has decided to extend the show season by holding a show earlier, believing that no better time for holding a show could be selected than Thanksgiving week. Exhibitors who show and win at that time will be in a position to sell their winners as well as other stock to others who exhibit at the later shows. In other words, it will create a new and early market for high class stock.

The judges selected will be announced next month, leading specialists from the East, the West and Canada having been engaged to place the ribbons.

That great interest is being manifested in the coming show, the following letter from W. C. Pierce, the noted poultry breeder and judge of Indiana, is a fair sample of: "Buffalo is located where it should have one of the largest and best shows in the country, and there is no reason why a good bunch of Western exhibitors should not come there."

Similar sentiments have been ex-

pressed in letters received from breeders in different parts of the country, so that the management feels encouraged in its efforts to stage an "All America Show" that will be a credit to the American poultry industry and an honor to the city of Buffalo.

J. H. Drevenstedt, Secretary.

## THE GREAT ST. LOUIS POULTRY SHOW.

Secretary T. W. Orcutt of the St. Louis Poultry Show announces that the great St. Louis Poultry Show will be held in the Coliseum at St. Louis, Nov. 25th to Dec. 1st, inclusive, 1913.

The mammoth Coliseum, in which this great show will be held, is conceded to be the finest show room in the world, and the facilities for handling exhibits are perfect in every detail. It was noted last year that birds were in their proper coops in the show room within thirty minutes after they arrived in St. Louis. Another remarkable feature was that the entire show was completely judged in one day and the next morning a marked catalogue was issued showing the complete awards. These features should be a great incentive for breeders to show at St. Louis this year, for at no other show in the coun-

I have 50 cockerels for sale, grand birds, beautifully marked, and now between three and four months old. I guarantee each has been sired by

**1912—Silver King, First Chicago Cock—1912**

Among these are the winners at the 1913 fairs and poultry shows. If interested, write me today.

**FRANK E. HERING, South Bend, Ind.**

Reference: THE AMERICAN TRUST CO., South Bend, Ind.

try is there a marked catalogue issued the second morning which gives the exhibitors five days in which to display their exhibits and distribute advertising matter to the public, and to sell birds and take orders for eggs.

The attendance at St. Louis is very large and no state in the country has so many people interested in poultry as there is around St. Louis within a radius of one hundred miles. St. Louis is rapidly developing into the liveliest market for fancy poultry in the world, which is in accord with the great State of Missouri in its advancement in the poultry enterprise. The manner in which the great St. Louis Poultry Show has been conducted has earned for it the name of the Madison Square Garden Show of the West, and the management anticipates a record-breaking show this year. A complete list of the judging staff will be announced later. For further information regarding exhibit space and premium list, address T. W. Orcutt, 921 Security Bldg., St. Louis, Mo.

**LICE KILLER** Liceall, strongest compound made. Works like magic. Simply put a few drops in nests and hang bottle in coop. Powerful evaporating vapors go into feathers, cracks and crevices. No painting, spraying or dusting. Easy to use. Circular free. Found bottle prepaid 50c. Money back if it fails. Agents wanted W. H. Metzger Co., No. 43 Quincy, Ill.

## Newtown "Giant" Incubator and Brooder

Thousands of Newtown equipments are now in use in every State in the United States but two, and in Canada, Germany, Argentina, Australia and England.

Only great efficiency and superiority of a product can make such distribution possible.

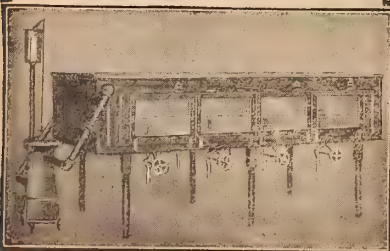

### Safe and Sure

The absolute safety and surety of Newtown equipments is attested by the experience of Messrs. Stillwell and Stillwell, Rosebud, Texas:

"We have been running the little 'Giant' Incubator we purchased from you with great success. We have taken off an average hatch of 115 chicks from each compartment of 150 eggs, which is about 77% of all eggs set. This is the most remarkable hatching we have ever done and we have run a dozen different incubators. The chicks are uniformly the largest and healthiest we have ever hatched.—March 28th, 1913."

Write now for catalog 1, that gives the unvarnished facts regarding the most profitable incubator and brooder that you can buy for your poultry raising.

### POULTRY CONVENTION.

Massachusetts Agricultural College,  
July 28, 29, 30.

Monday, July 28.

2:00 p. m.—Address of welcome, Professor Edward M. Lewis, Acting President of the Massachusetts Agricultural College.

2:30 p. m.—Address, "Artificial Incubation," Mr. J. L. Nix, Homer City, Pa., President of Prairie State Incubator Company.

3:30 p. m.—Visit to the college poultry plant.

7:30 p. m.—General discussion on "Problems of the Poultryman," led by Mr. Nix, Prof. Graham, Mr. Eastman, and others. This should be one of the most profitable sessions of the convention.

Tuesday, July 29.

9:00 a. m.—Address, "Bacillary White Diarrhea," Dr. George S. Gage, Pathological Department of the Massachusetts Agricultural College.

10:00 a. m.—Address, "Artificial Brooding," Mr. J. L. Nix, President of Prairie State Incubator Company.

11:00 a. m.—Address, "The Human Element as a Factor in Poultry Keeping," Prof. J. C. Graham, Poultry Department of the Massachusetts Agricultural College.

1:30 p. m.—Address, "Poultry Breeding," Prof. James E. Rice, Cornell University, Ithaca, N. Y.

2:30 p. m.—Chalk talk, "Standard Types and Ideals," Mr. Franklin L. Sewall, Niles, Mich.

3:30 p. m.—Demonstration in killing, picking, etc., Mr. C. J. Kelley, foreman of college poultry yards.

7:30 p. m.—Stereopticon lecture, Prof. James E. Rice, Cornell University.

8:30 p. m.—Chalk talk, "Some Practical Points in Type," Mr. Sewall.

Wednesday, June 30.

(This session is held under the auspices of the Massachusetts Poultry Association, with President George S. Eastman presiding.)

9:00 a. m.—"What the Massachusetts Poultry Association Is Doing," Mr. Eastman.

9:30 a. m.—Address, "The Composition of a Pure Bred Flock of Poultry," Mr. H. D. Goodale, Research Biologist in Poultry Department of the Massachusetts Agricultural College.

10:30 a. m.—Caponizing demonstration, Mr. Henry D. Smith, Rockland, Mass.

### INTERNATIONAL SANITARY HOVER

Warmest at curtain—no crowding of chicks. The Rancocas Poultry Farms, the largest and most profitable in the world, use this hover exclusively.

International Poultry Sales Co., Box 511, Brown's Mills, N. J.

### 5000 BABY CHICKS 5000

Strong, sturdy, robust chaps, direct from D. W. Young strain, winners at Boston, Mass.

WHITE LEGHORNS, \$6 per 50, \$9.50 per 100, \$90 per 1,000. Barred and White Rocks, White Wyandottes, R. I. Reds, \$8 per 50, \$15 per 100.

1,000 PULLETS—White Leghorns, ten weeks old, \$1 each. Chance to get stock of good quality at right prices, promptly. Mention A. P. J.

Cloverdale Poultry Farm, Box A, Ransomville, N. Y.

### SILVER CAMPINES

Best English imported and American bred. We have birds in our yards from Capt. Max De Bathe of England. Also Kennedy and other leading strains. Booking egg orders now. Orpington eggs at 1/2 price from Buff, Black and White. None better. Write for prices. Booklet free. Mention Am. Poultry Journal.

C. E. Vass, Washington, N. J.

## \$10 TO YOU

If you know a dissatisfied OCULUM user, who did not get his money back on request from us. We have dissatisfied customers; for OCULUM is not a panacea, and we have had people try to cure Consumption, Gastritis and even a nail in the crop with OCULUM and failed. But back went their money with a letter of instructions. Over 90 per cent of them are now enthusiastic OCULUMITES.

For Cholera, Roup, White Diarrhea and Blackhead you can depend absolutely on OCULUM.

At your dealers or by mail at \$1.00 and \$0.50 per bottle. Testimonials from your state free.

Oculum, Box B. Salem, Va.

## You can now get Certain-teed Roofing guaranteed 15 years

Here is the modern, easy-to-lay economical roofing you have always wanted—a roofing that is weather proof under the most severe conditions—will not ignite from flying sparks and embers—is an insulator from lightning.

You can get **Certain-teed** Roofing in permanent colored shingles, red, green, and slate gray for Residences, Cottages, Bungalows, Garages.

**Certain-teed** Roll Roofing—for all general uses, costs less than metal, tin or wood shingles and is far less expensive to lay.

Look for the **Certain-teed** Label of Quality on every roll or crate of shingles you buy—it is placed there for your protection and will save you money.

### Valuable Book FREE

Get the latest ideas before you build—our new book, "Modern Building Ideas and Plans" illustrates the newest developments in all kinds of model buildings—it suggests economies and conveniences that will save you money.

A book of this kind would ordinarily sell for \$1, but as it shows the different uses of **Certain-teed** Roofing, we offer it to you for 25c. We prefer, however, to have you go to your lumber, hardware or building material dealer, who will gladly get you a copy free. If you write us, enclose 25c to cover cost, wrapping and postage.

**General Roofing Mfg. Co.**

E. St. Louis, Ill., York, Pa.,  
Marseilles, Ill., Minneapolis, San Francisco,  
Winnipeg, Canada

General Roofing  
The World's largest  
manufacturer of  
Roofings and Building  
Papers.

**GRAND CENTRAL PALACE SHOW.**

We believe that many of our readers will be interested in a new departure in show management, to be used this year at the Palace Show, New York City.

I. They will send a leg band marked "Palace" and numbered to correspond with the coop number for each poultry exhibit.

This will assist greatly in the prompt return of any specimen that may go astray in shipment, or should a bird get out of its coop, it can be easily identified. An exhibitor sending two birds of the same kind will know at once which bird was placed, and if two birds are exhibited, and one for sale, it will avoid error.

II. The shipping tag will contain complete record.

A. Instructions for shipping to and from the show.

B. Coop number in goldface type, similar to that on coop, and readily distinguished from class numbers.

C. Class numbers will be in small figures, and variety will be written out, thus: Class No. 1, Barred Rock Cock.

D. Selling price, if any, has been given.

E. Space for return shipment valuation.

The express company now insists that the management declare a value. They will declare value at any figure indicated, and if no figure stated, at regular rate and value \$5 per bird.

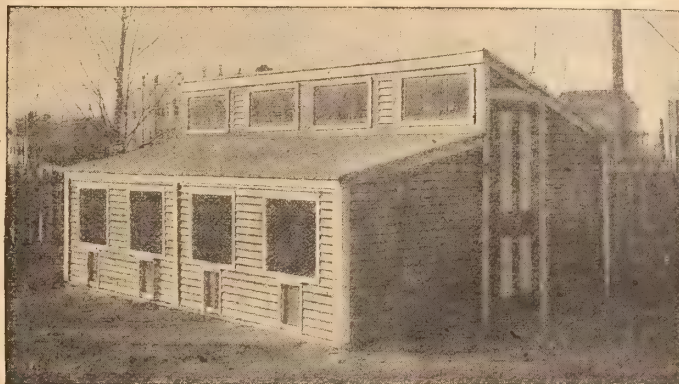

**ANCONA CLUB NOTES.**

The Ancona Club is about to issue its annual Year Book, which will contain a list of members' names and addresses,

considerable live Ancona reading matter, and the book will be profusely illustrated. This book is given wide circulation throughout the United States and Canada, and progressive Ancona breeders should not be left out. Membership costs but one dollar per year, or, together with the official organ of the club, the Ancona World, \$1.25. Breed-

meeting at Buffalo, N. Y., in January, was published in the April issue of the Ancona World, and seems to meet the approval of the majority of breeders.

If Anconas are not better known in 1913 than they have been heretofore, it will not be the fault of the Ancona Club, as the club is distributing tens of thousands of boosting circulars through-

This is an illustration of the two section house put up by the Dyer Portable House and Mfg. Co.; they show a three section on another page in their advertisement and a one section in previous issues. They manufacture a full line of houses, brooders and poultry appliances and issue a catalog which is sent free on request. They are regular advertisers and we can recommend them as being responsible to fill any orders intrusted to them on short notice. Write for their catalogue and mention the American Poultry Journal.

ers will be listed in the book if they join the club at once. Remittance should be sent to R. W. Van Hoesen, President, Franklinville, N. Y.

The Ancona Club is working with the revision committee to get a more satisfactory standard of perfection for Anconas in the next revision of the American Standard. The new proposed standard, as adopted in the annual club

out the country. The result is already manifest in new converts to Anconism and a multiplication of club members. Any Ancona breeder who has either the good of the cause or his own personal advantage at heart should not hesitate to co-operate by sending his dollar to join the club.

President Van Hoesen of the Ancona Club has started out to have the breed-

Eggs for Hatching—June Delivery—Lowest prices ever offered from our best matings. Two settings for five dollars. This is to induce you to try out and compare our special matings. Our birds won out in Cleveland show in 1913. Mention American Poultry Journal when writing.

**BELL VISTA FARM : : : MENTOR, OHIO**

## WARREN'S AUTOCRATS SINGLE COMB REDS

## IF YOUR PRIMARY OBJECT IS EGG PROFIT

Try Pape's Trapnested Strain Single Comb Black Minorcas. They combine superior qualities both as a show bird and utility fowl. Stock and eggs that will hatch at half price. Most prize winners are hatched in June. State your requirements—we will help you.

**Charles G. Pape : Box B-74 : Fort Wayne, Indiana**

# WHITE WYANDOTTES

Bred in line for years, line breeding which has produced the principal winners of the leading shows throughout this country. Bred so they reproduce themselves in their off-springs, year after year. Such is the breeding quality of

## The World's Best Strain

As to utility qualities, they are the best, the highest egg record hen today is a Fishel World's Best Strain White Wyandotte. We have a limited number of cocks, hens, cockerels and pullets for sale which we have listed in our annual sale list. Send for one today, it is full of bargains. Our new catalogue will give all the information obtainable on poultry culture. Mailed for twenty-five cents.

**J. C. Fishel & Son : Box J : Hope, Indiana**

ers co-operate in issuing an elegant colored plate of Ancona fowls, in natural colors. It goes without saying that the enterprise will succeed, as Mr. Van Hoesen never yet undertook any Ancona stunt that he did not carry to a successful finish. It is proposed to have the work done by the best talent obtainable in the country.

There is good reason to expect that the efforts of the Ancona Club to have Anconas illustrated in the new standard will be successful. When live breeders co-operate to accomplish a proposition, it usually has the desired effect.

#### INTERNATIONAL ROSE COMB BLACK MINORCA CLUB NOTICE.

The 1913 edition of the International Rose Comb Black Minorca Club Catalogue is now ready for distribution, and it is the earnest desire of the officers that a copy be placed in the hands of every one interested in this variety and every one who is as yet undecided as to what variety of fowls to breed for egg production.

This catalogue fully explains the different qualities of Rose Comb Black Minorcas, the methods used by the most prominent breeders in caring for them, and many other things of value to all interested in poultry, and especially Minorcas.

This book is for free distribution and will be sent on receipt of a postal asking for it, but if you wish to write a letter and inclose a postage stamp it will be appreciated, and the book is worth it. Over fifty pages. Send for your copy now.

The following officers were elected at the 1913 meeting, held at Boston, January 10: President, A. M. Moody, Boston, Mass.; vice-president, H. A. Keister, Bangor, Mich.; secretary-treasurer,

Lloyd C. Mishler, North Manchester, Ind., to whom requests for club catalogues should be sent.

#### 'BLACK ORPINGTON BREEDERS, ATTENTION!

A strong effort is being made to increase the membership of the National S. C. Black Orpington Club to 1,000 members, the 500 mark having now been passed.

Until the 1,000 mark is reached, the members joining will have their dues extended to Oct. 1, 1914. This gives an opportunity for competing at all the state fairs and county fairs and fall shows, as well as a full year, beginning Oct. 1, all for \$1.

Fanciers of the Blacks are urged to send a stamp to Milton W. Brown, Sta. L, Cincinnati, Ohio, for a club catalogue containing the names of more than 500 enthusiastic breeders of the Black Orpingtons.

#### TO WHOM IT MAY CONCERN:

At a meeting of the Board of Directors of the Georgia Experiment Station, held today, it was found necessary to abolish the Poultry Department of this station, to take effect July 1, 1913. Lack of available funds with which to carry on this work was the one and only reason for taking this action.

This action in no manner reflects upon Mr. Rolf, who has been employed as Poultry Husbandman since July, 1912. During this time he has, with very limited funds, and under great difficulties, established a very creditable poultry department, and achieved a goodly amount of beneficial results from his experimental work. His work has been perfectly satisfactory in every way.

I heartily recommend Mr. Rolf to

any person or to any institution which may desire the services of a competent poultryman. Respectfully,

R. C. Neely,  
Chairman Executive Committee of  
Board of Directors of the Georgia  
Experiment Station.

#### COLUMBIAN WYANDOTTE BREEDERS.

Notice is hereby given to the members of The National Columbian Wyandotte Club, that you are requested to vote for Minneapolis, Minn., for the next annual meeting place of the club. If you are not a member of the above mentioned club, send in your application with (one) dollar which pays for a years dues, to Ralph Woodward, secretary-treasurer, Grafton, Mass., or L. A. Lee, 2832 N. Harding ave., Chicago, secretary for the State of Illinois.

We are pleased to inform our readers that W. Theo. Wittman, who has so successfully managed the poultry department of the great Allentown Fair, Allentown, Pa., for a number of years, will, in addition to the above show, hereafter have sole charge of the Lancaster Fair Poultry Show. Lancaster county, Pennsylvania, is the richest agricultural county in the world, and the Fair and Poultry Show therewith are to be on a scale matching the reputation of the county. This poultry show will be the week of Sept. 29-Oct. 3, or immediately following the Allentown Show, and will, besides having all the good features that have made the latter famous, some new and unique features. Mr. J. F. Seldomridge, Lancaster, Pa., is the secretary of the fair, but all matters relating to the poultry show should be addressed to W. Theo. Wittman, Allentown, Pa.

**U. R. FISHEL'S AD in this issue will interest you. Read it.**

## Rose's Black Orpingtons

**BARGAIN SALE** Having concluded a most successful breeding season we will sell at actually one-half value. Fifty grand low set ma asive yearling cocks, \$5, \$10, \$15 each. Also 200 yearling hens on the low down blocky type at \$5, \$7.50, \$10 and \$15 each. You who are looking ahead for next year's breeders and show stock, write us now and produce birds at rock bottom prices from the largest and most successful breeders of Black Orpingtons in America.

**Hugh A. Rose : Frank F. Conway, Manager : Fonthill, Ontario, Canada**

## Buff Orpingtons

**JUNE AND JULY EGGS AT HALF PRICE**

If you want to know more of the Best Buff Orpingtons in the world, write for the Orpington Fashion Plate Book—it's free. Correctly mated trios, \$15.00; pens, \$25.00 as a June offering.

## THE MAN WHO "MADE" PART- RIDGE ROCKS.

How many of our readers have noticed the rapidly increasing popularity of the Partridge Plymouth Rock fowl?

At the present rate of increase the Partridge Plymouth Rock will soon rank "First in Beauty," "First in the Nest," "First on the Table" and "First in the Hearts of All Poultrymen."

The "making" of a new fowl requires experience, breeding ability, judgment and painstaking work. The feat of originating the Partridge Plymouth Rock fowl, applying for and securing its admission to the American Standard of Perfection, was accomplished by Mr. S. A. Nofztger, North Manchester, Ind., whose photograph we print below.

Mr. Nofztger has been rightly called "The Partridge Plymouth Rock King." His success with this new breed is well deserved.

Only those who know him best can realize and appreciate his untiring efforts in building and placing into all parts of the world his ideal fowl—The Partridge Plymouth Rock.

**JOHN F. HOLLIS, WHITE WYANDOTTES, NORTH ABINGTON, MASS.**

There are but few if any better known or liked breeders than Mr. John F. Hollis. His great many years of breeding the White Wyandotte and exhibiting his birds in fast company has brought him prominently before the public, and the verdict has ever been the same for all who have met him or have had business dealings with him, like him for what he is and what he has done.

White Wyandottes are his hobby and if memory serves us rightly he was one of their early and first champions and has been faithful ever since to them. For a great many years we have seen his birds at the Boston Show and we have always noted him as a winner. We haven't his complete record at this time to give, but we do know his line and their quality and feel safe in saying that White Wyandottes that win at Boston can win at any show.

In several of our reports of the Boston Show we have particularly referred to Mr. Hollis's birds, for they have the vigor and character we like to see. They are strong birds of good bone and exquisite lines, with fine heads. There is that about them that is neat and desirable with all their size and not bulky. In color Mr. Hollis has exceptional quality, birds in feather pure white with high colored legs and strong red eyes. They are a line worth trying to for successful breeding.

We have twice started to see this line at their home, but have been prevented by conditions, but will hope to pay Mr. Hollis a visit which is due him this fall, for we are most anxious to see this line at home and at their best.

Mr. Hollis has for sale selected breeders, and is booking orders for young birds for the early shows. Write him your wants and rest assured of getting just what you want from him. Please mention A. P. J. in writing him. H. P. Schwab.

E. H. Lichtenwalter, Girard, Pa., the well-known breeder of Quality Buff Plymouth Rocks, is offering some great bargains this month in high quality cocks and cock-

erels. He is also offering for sale his first Philadelphia cock, first Williamsport cock and first Cleveland cock. There is no better blood in the country than this and they are offered at bargain prices. Write him at once and get first choice.

F. L. Poultry Farm, Rhode Island Reds have won their share of ribbons and cups at the prominent shows in the past. At the late Cincinnati Show, they won as follows: On Rose Combs—1, 2, 3 cocks; 2 hen; 2, 4, 5 cockerels; 1, 3, pullets. On Single Combs—2, 3 cocks, 2, 3 hens, 6

cockerel, 5 pullet; 1, 3 pens. Also silver cup for best display Single Combs and special for shape and color on Rose Combs. \$5.00 gold special for champion female. Have also won 1st hen New York and Pittsburgh. They report egg and baby chick business booming. Baby chick orders booked up to June 25th. They are now offering a few of their choice birds at bargain prices. Here is a good opportunity to get something with blood-lines back of it, as their birds have been bred in line since 1900. For further information address F. L. Poultry Farm, R. F. D. No. 1, Verona, Pa.

## Rose Comb White Orpingtons

Trios, \$10.00; pens, \$15.00. Coming boom breed.

Winners at leading shows wherever shown. Young stock and last season's breeders and exhibition birds at reasonable prices. No better breeding. Write today.

Chas. Shields : Library Place, North Side : Pittsburg, Pennsylvania

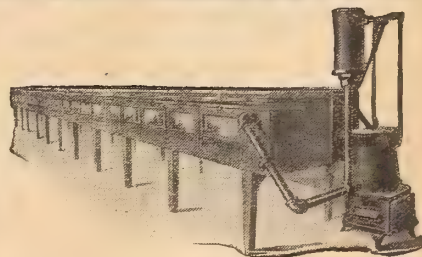

## THE O. K. SANITARY DRINKING FOUNTAIN

Well made of galvanized steel throughout. The pan from which the fowls drink is seamless, being stamped up from a disc of sheet steel, and galvanized after stamping—this makes it most durable. The water is poured in at the top the same as into a pail, and the detachable valve, which can be removed and replaced instantly, makes the O. K. Fountain the easiest to keep clean, and consequently most sanitary. The double wall construction keeps water cool and fresh in Summer, and prevents freezing in Winter. Made in three sizes for chicks and fowls. Let us send you our catalogue No. B-20 which gives complete description of these drinking fountains, and several other new labor-saving poultry yard devices. Mention American Poultry Journal.

## PARTRIDGE ROCK BARGAINS FOR JUNE.

A letter just received from Mr. S. A. Nofztger, of North Manchester, Ind., the originator of the Partridge Plymouth Rock fowl, states that he has nearly two thousand young chicks, with good prospects of having twenty-five hundred by June first, and on that account he has changed his ad in this issue and is offering a "June Bargain Sale." In short, Mr. Nofztger purposes to sell a large number of his breeders and during the month of June will offer several nice breeding trios at \$15.00, \$17.50, \$20.00 and \$25.00 per trio. He also offers a few splendid breeding pens at \$25.00, \$30.00 and \$35.00 per pen, and best of all he guarantees these birds to be satisfactory or they can be returned prepaid and the purchase price will be refunded.

This certainly is a fine opportunity for our readers to secure some of Mr. Nofztger's "Best in the World" strain—to get a few direct from "the fountain head."

Besides offering these trios and pens at about one-half what they are worth, Mr. Nofztger will now sell eggs at one-half the regular price of baby chicks for the regular price of eggs.

Many of our readers have already sent for and received Mr. Nofztger's latest mating booklet and consequently know the quality of his matings; those who have not received this booklet should send for it at once and don't fail to state in your letter that you read of his "June Bargains" in this paper. And, by the way, don't overlook those low prices on trios and pens.

Mr. Nofztger states that he is better prepared than ever to furnish high class exhibition birds in either young or old stock for the early fall fairs or shows. It would pay you to write him immediately regarding your future requirements and thus take advantage of a "sacrifice summer price."

### A NEW FIRM.

The Cherry Lane Farm Co., Oak Hill, W. Va., has been granted incorporation papers and are taking over the entire farm with its stock and equipment that was formerly owned by Mr. O. Wilson, Carlisle, W. Va.

Prominent among the poultry features that were included with the sale was the pen of Single Comb Buff Orpingtons that were awarded first place among all the Orpingtons entered in the egg-laying contest at Storrs, Conn., last year, and the pen that is entered there this year and which have already won distinction in the second contest.

Mr. Wilson has been retained as manager for the new company and assures us that never at any time will quality be sacrificed to quantity. His old system of trap-nesting and pedigreeing will be continued, and indications now show that he will be able to mate approximately 125 females next year that have made records of 165 or more eggs.

The new company will have some hatching eggs to spare under the half-price rule and interested parties should address either Mr. Wilson or the company at Oak Hill, W. Va., to get in on the bargains that are offered.

### LICENE KILLS THE LICE.

When other lice-killers fail, try Licene; it does the work every time. Send to the Licene Co., Pontiac Bldg., Chicago, Ill., 50c and they will send you enough Licene for 200 birds. Read this testimonial:

3854 Byron St., Chicago, Feb. 28, 1913.  
Gentlemen: After unsuccessfully using almost every known "lice killer," both in the powdered and liquid form, I bought a box of Licene at the Chicago Show last December. It has killed every louse and "nits" on my birds, and have saved at least 25 per cent in feed bills. Not a louse on my chickens now. Shall recommend Licene as the best and most scientific lice exterminator on the market.

Dr. R. H. McKenzie.

### "CASEY JONES TO OCULUM."

Come all ye chickens if you want to hear The story of "Oculum" that cures white diarrhea; Gapes, cholera, roup, hide in shame From "Wondrous Oculum" of world-wide fame.

Hawkins and Fishel say it's all right, 'Tis highly endorsed by William Ellery Bright; Latham, Blair and Foxhurst Farm Use "Oculum" always and fear no harm.

## MORE CHICKS—LESS TROUBLE.

"The International Sanitary Hover," says the catalog of the International Poultry Sales Company, "raises more chicks and less trouble than any other brooding device ever invented."

The claim is amply borne out by the hundreds of testimonials contained in the catalog. Among the warm endorsers of the Sanitary Hover are Kellerstrass, Owen Farms, Wm. Cook & Sons, and Rufus Delafield. There are numerous testimonials from all classes—from beginners in the business as well as from concerns of worldwide reputation.

Perhaps the chief distinguishing feature of the Sanitary Hover is the fact that it is several degrees warmer near the curtain than at the center. This, by preventing crowding, trampling, and smothering of chicks, insures a high percentage of strong, robust birds from every hatch. Other important features are the fact that the hover can be used anywhere, which makes unnecessary an expensive brooding house; the fact that no cutting of holes or building of platforms is required to set the hover up; the fact that there is no danger of fire where the Sanitary Hover is used; and the fact that the lamp can be lifted out through the top by a person standing up, which renders it unnecessary for the operator to go down on his knees in the dust or mud.

As a grower of green food, the Sanitary Hover cannot be excelled. In eight days it will transform 12 quarts of oats into enough egg-making green food to feed 500 laying hens for 3 days. This makes the hover practically an all-the-year-round device.

Full description of the Sanitary Hover will be found in the catalog of the International Poultry Sales Co., which will be sent free to any person dropping a line to the headquarters at Brown's Mills in the Pines, N. J.

## SETTING UP A CANDEE.

Work Done in Less Than a Day on a 1,200-Egg Machine.

The installation of the Candee incubator has been perfected to such an extent that it only takes a short time. Customers were asked how much time they spent in putting their incubator together and their replies show that on the average a 2,400 egg (four section) machine is ready to run in one day. This is not surprising because all one has to do is to uncrate the sections, set them on the legs and couple up the pipes, which come all cut to length. One man did the work with simply an 18-inch Stilson wrench.

Almost all the Candee customers put their machines together themselves and thus save the expenses of a representative from the factory. This saving increases the farther the customer lives from the factory, and it sometimes amounts to over \$100. As a rule, the manufacturers require the purchaser to pay the railroad fare, traveling expenses and board. When this is added to the cost price it is quite an expense and well worth saving. If our readers wish to know more about the Candee, they can get a catalogue free by addressing Candee Incubator and Brooder Co., Eastwood, N. Y., Dept. 2.

Any of our readers who have not equipped themselves with a good sprayer should write to the E. C. Brown Co., 52 Jay St., Rochester, N. Y., and ask for their latest book and catalog on spraying and spray pumps. They make all kinds and sizes and their prices are mighty reasonable, considering the splendid quality and fine, improved features that they offer in their sprayers. Their free book is full of the right sort of information. When you get this book you will find all the information you need, good advice about when to spray, and good receipts for making up different solutions for whatever your needs may require. You will also find that these sprayers are good for using whitewash solutions to spray poultry houses, cattle sheds and all that sort of thing. Send the postal today.

Aug. D. Arnold, Dillsburg, Pa., the well-known breeder of White Faverolles and Campines, is offering eggs at greatly reduced prices this month. Faverolle eggs, \$6 per 15; \$10 per 30. Campine eggs, \$5 per 30; \$12 per 100. This information was not received by us in time to make change in his ad this month. Therefore order direct from this notice and save time.

## BLACK LANGSHANS and INDIAN RUNNER DUCKS

White Orpingtons, Buff Orpingtons, Columbian Wyandottes, White Wyandottes, \$3.75 for 25, \$7.00 for 50, \$13.50 for 100. Mixed Broiler Chicks, \$8.00 for 100, \$40.00 for 500. Orders filled promptly. Safe delivery guaranteed. Send postoffice order for full amount with order. Remember you will receive some of our 50-cent chicks in each lot you order. Mention American Poultry Journal.

The Co-Operative Breeding & Hatching Co., Box A, Tiro, Ohio

Louis Lee Haggin, proprietor of the Russell Cave Poultry Yard, Lexington, Ky., is now prepared to furnish a limited number of cockerels and pullets, all early hatched birds, from \$5.00 up. These are from a hatching of one thousand chicks hatched during January and February and at the prices he is offering them they are bound to please the purchaser. The Russell Cave Poultry Yard is devoted exclusively to the breeding of White Orpingtons, and the birds produced and exhibited by these yards during the past few years have made wonderful records as prize winners. The hen, "Lady of the Cave," which is claimed to be the greatest White Orpington hen in this country, won first at the Missouri State Poultry Show, first at Allentown, first at Augusta and first at the Texas State Fair.

Mr. Haggin's birds are also making a grand record as egg producers and in the Missouri Egg Laying Contest for the month of February his White Orpington pen won the silver cup. This pen is entered at this contest as "Kentucky."

Elsewhere in this issue will be found an offer wherein Mr. Haggin is giving away \$190.00 worth of his White Orpingtons and White Orpington eggs to subscribers of American Poultry Journal who can write the best article on ten reasons why the White Orpington is the best utility fowl. There is absolutely no strings to this offer, with the exception that those who enter this contest must be subscribers of American Poultry Journal. Don't overlook reading this liberal proposition.

H. N. Hanchett, the White Wyandotte Specialist, Vineyard Haven, Mass., informs us that he is moving back to his old home at Jackson, Mich., and that after July first he will be permanently located there. He has had a large number of White Wyandottes grown for him this season from his New York and Chicago winners, and all these superb breeders will be taken home with him. Mrs. Hanchett is devoting her time to breeding Blue Orpingtons and expects in the very near future to be in position to offer for sale some excellent specimens. Mr. Hanchett was located in Jackson, Mich., for many years, where he produced some of the best Buff Cochins ever produced in this country, and it is his aim to do the same thing in White Wyandottes.

Maurice F. Delano, successor to Owen Farms, Vineyard Haven, Mass., has just issued a special circular in which he is offering eggs at greatly reduced prices during the summer months. He is also making a special stock sale in which he offers five pens in Buff and White Orpingtons, White Rocks and White Wyandottes, exactly as they are mated and listed in Owen Farms mating list for 1913. He is also offering for sale any or all of the listed pens in Single Comb Reds and Black Orpingtons. All these pens he is offering at prices that will move them quick. He expects to issue a large illustrated catalogue early in September. Our subscribers should get on his mailing list at this time to get his new catalogue as soon as issued. Send for a copy of this special summer circular and mention American Poultry Journal.

Ira C. Keller, Prospect, Ohio, is making a sacrifice sale of 500 head of Wyandotte breeders, and is now selling eggs at half price from his choice matings. His special sale of breeders includes many of his prize winners, and he is offering them at prices that will move them quick. Look up his ad in this issue.

**\$60 PER HEN PER YEAR**

## WANTED.

**POULTRYMAN WANTED**—On large plant. State full particulars in first letter. A. Hoffman, State Hospital, Mt. Pleasant, Iowa. 6

**WANTED POSITION** on large poultry farm by wide-awake young man. Apt hustler. Address F. L., c/o American Poultry Journal. 6

**WANTED IMMEDIATELY.** I am looking for a man who has had practical experience in raising White Leghorns for egg and exhibition purposes, to take the management of a poultry farm that is up-to-date in every respect. At present it has between 1500 and 2000 birds. The farm is located 1 mile from a city of 60,000 people. A splendid egg trade is already established. The birds are all bred from New York and Chicago prize-winners and there is no better strain in the country. The owner desires to enter exhibits in the principal mid-Western fairs and Poultry Shows this fall and winter. In writing, state age, experience, whether married, wages expected, and so on. Address, A. M. Cass, Box 398, South Bend, Ind. 6-8

**DESIRE PLACE, NEW ENGLAND** poultry farm. Young; some experience. M. Galanche, 74 Intervale St., Roxbury, Mass. 6

**WANTED—CYPHERS INCUBATORS AND** brooder. Stat. model, size and price. Clarence Pool, Urbair, Ohio. 6

## SECOND TO NONE--ANCONAS

America's and England's very choicest imported and bred Anconas; and also White Indian Runner Ducks, including Crystal Palace, Madison Square Garden, Cleveland, Guelph, Toronto, London, Hamilton, East York, and all the large shows in Canada. The only line-bred registered Anconas in America. Write for my mating list and particulars. Eggs from this stock cannot fail to produce you first prize show birds, and in my pens are the following birds: 1st cock, Madison Square Garden, New York, 1913; 1st and 2d pullet, Madison Square Garden, New York, 1913; 1st cockerel Crystal Palace, England; 1st and 3d hen, Guelph, Ont., 1912; 1st, 2d, 3d, and 4th pullets, Guelph, Ont., 1912; 2d cock, Guelph, Ont., 1912; 1st hen, Toronto, Ont., 1912; 1st pullet, Toronto, Ont., 1912; 1st, 2d, 3d, 4th pullets, London, Ont., 1912; 1st and 2d cockerel, London, Ont., 1912; 1st and 2d cocks, East York, Ont., 1912; 1st and 2d hens, East York, Ont., 1912; 1st cock, Hamilton, Ont., 1912; special hen, Hamilton, Ont., 1912; Quebec Provincial Poultry Show, Montreal, Feb., 1913. 1st and 2d cock, 1st, 2d and 4th hen, 1st, 2d, 3d and 4th cockerel, 1st and 2d pullet. I have also a number of other prize birds too numerous to mention.

**Dr. A. H. Hall, Prop. Diamond Ancona Poultry Yards, 394 Main St. E., Hamilton, Ontario**

Pres. Canadian Mottled Ancona Club; member of the International Ancona Club, Ancona Club of America, Ancona Club, and, in fact, I am a member of every Ancona Club in America.

## THE 1912 REVISED EDITION OF THE AMERICAN STANDARD OF PERFECTION

The only American authority on the required characteristics of all breeds and varieties of chickens, ducks, turkeys and geese. **You cannot raise, mate, exhibit or sell fowls intelligently without it.**

**This Great Book** was revised this year (1912) and gives the correct Standard shape, color and weight of every recognized variety of chickens, ducks, turkeys and geese, as well as the disqualifications of each variety. The book contains 332 pages of descriptive matter and ideal illustrations of the different varieties of fowls, photographed from living models. Also

### Five Full-Page Illustrations of Feathers in Natural Colors

to guide the breeder in getting the correct color of plumage on his birds. No one can breed birds of any variety for exhibition without a copy of the **American Standard of Perfection** as a guide, and it is the only book of its kind published in this country. It is authorized, copyrighted and published by the American Poultry Association. Price postpaid, cloth, \$2; leather, \$2.50

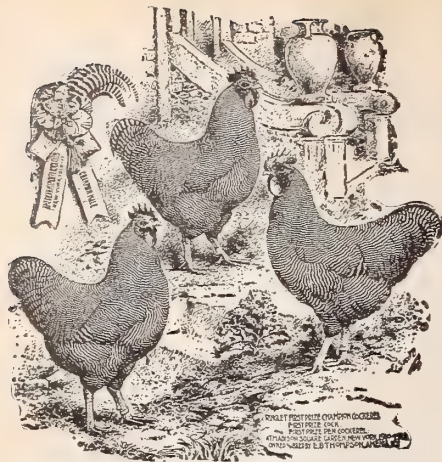

### OUR SPECIAL MONEY-SAVING OFFER

**The Standard (cloth) and American Poultry Journal one year..... \$2.50**

If you want leather binding add 50c to this price. Canadian subscribers add 25 cents per year for postage; foreign 50 cents

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York, Winter 1910-1911.

**The Three Greatest Living Barred Rock Males**

# E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

Win the most remarkable record beyond all precedent in Barred Rock history at the imperial and most classic show of all America—Madison Square Garden, New York—this winter of 1913. Winning as follows:

First, second, sixth and eighth on cockerels. First and sixth on pullets. First, second and fifth on exhibition pens. First on cockerel mated pen. Second, third, fourth and fifth on cocks. The Imperial Prize of the show, Sweepstakes special for champion male. Sweepstakes special for champion female. Diploma presented by the American Poultry Association for best cockerel. Sweepstakes cup for best Plymouth Rock hatched in 1912, male or female, any variety. Challenge silver cup for best exhibition pen. Special best shaped male. Special best colored male. Special best colored female. Best cock, cockerel, hen and pullet, four best cockerels, four best pullets, \$25 special prize, presented by the New York Show for finest display. All silver cups and cash specials—four times as many first prizes as any competitor. More first prizes than all competitors combined. More first, regular and special prizes than won by any exhibition of any breed.

## My Exhibition of 56 Birds Was the Best the World Has Ever Seen

No other Barred Rock breeder has ever produced or is producing such matchless quality. Every feather in my exhibit was bred on my farm. My First Prize Champion Cockerel and First Prize Champion Pullet are years ahead of their time. They are the produce of the highest skill. No other Barred Rock breeder has ever accomplished the unprecedented achievement of winning the two greatest prizes in the world, Champion Male and Champion Female, at one show in Madison Square Garden. For 25 years at New York my "Ringlet" victories have been complete; my clean sweep of 1ST, 2ND, 3RD, 4TH AND 5TH PRIZES on pullets has never been approached at Madison Square Garden and stands alone and unequalled. The Imperial "Ringlets" are the standard by which all other Barred Rocks are judged. To meet success in winning prizes you must have my birds and eggs. I will sell you grand exhibition birds for any show, and breeders of this Richest First Prize, New York, blood. Richly illustrated 70-page catalogue upon request. It is full of original pictures of New York winners from life.

**Eggs** From the finest exhibition matings in all the world, \$10.00 per setting; four settings, \$35.00 one hundred eggs, \$60.00. One-half these prices after June 10th.

## ALDRICH'S QUALITY WHITE ORPINGTONS

During July ten of our best pens will be kept mated, and eggs from these pens will be sold at one-third price, or \$5.00 per setting, enabling any one to introduce the best blood in the world into their flock at a nominal cost.

We Are Offering a Few of Our This Year's Breeders at Attractive Prices  
During July and August

Our young stock this season is far superior to anything we have ever bred heretofore. Several prominent breeders and judges who have visited our farm recently have been amazed at the wonderful bone, size, excellent low down type, neat head, purity of color, with wonderful wide back and deep keel running through our entire flock of youngsters. These birds will be up to standard weight in August and if you wish to be certain to win the blue, we can supply you at prices never before thought of, and as we only sell to one customer for each show, we would advise you to book your order at once, which we will do at ten per cent deposit. Our winnings, as well as those of our customers, during the last three years at all of America's leading shows have never been equalled. Send for our catalogue, giving complete list of winnings and full description of our birds.

**MAMMOTH**  
**INCUBATOR**

There is no proof of merit equal to the word of a satisfied customer, and there is no proof of the word of a satisfied customer equal to an additional purchase.

Mount Pleasant Poultry Farm, Mount Pocono, Pa., purchased a 6000 egg Hall Incubator, in December, 1909. They doubled this capacity the following November, and in December, 1911, made an additional installation of 12000 capacity.

R. H. Loveland of Lamar, Penna., secured a 4500 egg machine from the Hall Company in November, 1911. A month after it was installed, he duplicated the order; in the following July, he brought his total capacity to 19,800.

R. W. Kerr of Frenchtown, N. J., first bought a 6000 egg Hall in the fall of 1910. A year later, he ordered an 8400 egg machine. The next fall he added a third machine equal to the second, but this time his business grew so fast that he was obliged to order a fourth machine of 8400 capacity in the midst of the 1913 hatching season.

This is the proof—we have arguments, too—our 1913 catalogue is filled with them. Have you a copy? If not, send for it now.

**1 2 SOUTHERN AVENUE :: :: LITTLE FALLS, N. Y.**

# CANDEE

## Every Size Candee is a Success

**The 1200-Egg Candee Incubator Does Equally as Good Work as the Larger Capacities.**

**A 1200-egg Candee Automatic Sectional Incubator**  
Our customers set them up in a day and run them as cheaply as one small oil machine.

*With the Candee you can depend upon it that whatever size you buy it is a proved success.*

*Hundreds of Candee 1200-egg machines are in use and their hatching work this year was wonderful—just as high percentages as the larger capacity.*

*A customer can start with 1200 (two sections) Candee and add extra sections at any time.*

*All Candee sections are made alike, the only difference in machines being in the number of sections the customer buys.*

*Each section is divided into two 300-egg compartments.*

### More Extracts from Letters from Our Customers

We think the 1200-egg Candee one of the best and most satisfactory investments on the farm. We have had a most successful season and have come to the conclusion that the person who cannot hatch fertile eggs in a Candee Incubator had better fall back on the bill of fare for their chickens.—*Braefoot Farm, T. K. Harrop, Supt., Victoria, B. C., May 13, 1913.*

This is our third season with our 3600 Candee. We incubated 16,200 Rhode Island Reds and the hatches were great and can't be beat.—*Scaman & Bogert, Port Washington, N. Y., May 26, 1913.*

We are doing custom hatching and from 18,000 eggs from 80 different places covering a territory of 20 miles radius, we have averaged 70% of eggs set. Have had as much as 94½% of eggs set hatch.—*Summit Poultry Farm, Ridgely, Md., May 10, 1913.*

I am very well pleased with my 1200-egg incubator. Out of 1789 eggs set, I got 1440 of the strongest and healthiest chicks you ever saw, and what is more, they live and grow.—*Phillip A. Schryver, Rhinecliff, N. Y., May 16, 1913.*

Your machine seems to hatch such strong chicks, as we have shipped them up in Northern Wisconsin, the east coast of Maine and to New York, New Jersey, Pennsylvania, Virginia, Alabama, Georgia and Colorado, and in every instance there has never been more than one dead chick in any of our shipments.—*Sunny Slope Ancona Farm, J. O. Somers, Bedford, Ohio, May 12, 1913.*

Your 1913 Model 10,200 egg capacity certainly is a fine machine and our poultryman tells me "The longer he uses it, the better he likes it."—*Huntington Farms, Henry Huntington, Supt., Rome, N. Y., May 5, 1913.*

I can't say enough for my 1200-egg incubator. It regulates perfectly and I leave it in the morning and don't see it again until evening. I have hatched in lamp incubators, but the Candee outhatches them all, with less expense and trouble than it used to take to operate one 150-egg lamp machine. I set up the incubator in 10 hours with nothing but a Stillson wrench.—*Edward Hamilton, Troy, N. Y., May 12, 1913.*

### Write for Free Incubator and Brooder Catalogue.

*If you are planning to build an incubator cellar or brooder house, building plans are supplied free.*

*Our Custom Hatching book telling how to run a Custom Hatchery is also sent free.*

*Write now and get the facts and figures about Candee equipment.*

## CHICKS FOR JULY DELIVERY

**LARGEST BABY CHICK  
HATCHERY IN AMERICA**

We have been baby chick specialists for thirteen years, and hatch day-old chicks from strictly first-class show and utility stock.

We furnish twenty standard varieties, but hatch the largest number of White and Brown Leghorns, Barred Rocks, White and Buff Orpingtons, Rhode Island Reds and White Wyandottes.

Reduced prices on all baby chicks. Write us your wants. Catalogue free. Mention A. P. J.

**M. UHL & CO.**  
NEW WASHINGTON, O.

## WHITE DIARRHOEA

Chicks can be raised as easily in July and August as in May, if our Prescription No. 5 is given as directed from the first feed. It is a guaranteed preventive.

**Prescription No. 3** is a sure cure where the disease has begun its ravages. J. C. Fishel says "It does the work."

Big box of either 25c, both 40c and your money back if you are not satisfied after using. Begin to feed **Prescription No. 4** now and your hens will hardly mind the molt. A five-pound carton of **Prescription No. 4** contains as much available lime as a ton of oyster shell. It will keep your hens in such perfect health that the egg will have so much vitality that White Diarrhoea will soon be unknown in your little chicks. Its use guarantees abundance of eggs. Five pounds, \$1.00, and your money back if not satisfied after using.

Sample carton of **Prescription No. 4, 25c.** Trial package containing a box of each of our remedies, \$1.00. Send for remedy circulars.

## THE O. K. SANITARY DRINKING FOUNTAIN

Well made of galvanized steel throughout. The pan from which the fowls drink is seamless, being stamped up from a disc of sheet steel, and galvanized after stamping—this makes it most durable. The water is poured in at the top the same as into a pail, and the detachable valve, which can be removed and replaced instantly, makes the O. K. Fountain the easiest to keep clean, and consequently most sanitary. The double wall construction keeps water cool and fresh in Summer, and prevents freezing in Winter. Made in three sizes for chicks and fowls. Let us send you our catalogue No. B-20 which gives complete description of these drinking fountains, and several other new labor-saving poultry yard devices. Mention American Poultry Journal.

## SHOEMAKER'S POULTRY BOOK

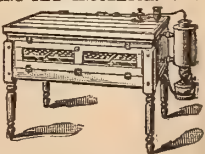

### AND ALMANAC.

There is nothing in the  
world like it. It contains  
over 200 large pages, with  
many fine illustrations.  
A number of BEAUTIFUL  
COLORED PLATES OF FOWLS  
—showing them in their nat-  
ural color. Tells all about  
all kinds of thoroughbred  
chickens, with life-like  
illustrations. Prices of eggs  
for hatching and fowls for breeding purposes. TELLS  
HOW TO RAISE POULTRY SUCCESSFULLY, their care and  
management and how to treat all diseases common  
among them. Gives illustrations and descriptions of  
convenient poultry houses, and plans to build them.

ALL ABOUT "GLOBE"

## INCUBATORS & BROODERS

with fine illustrations, complete description, and lowest  
prices. ALL ABOUT OPERATING THE INCUBATOR. This  
chapter is marvelously com-  
plete, and worth much more  
than the price we ask for  
the whole book. This Poultry  
Book is worth dollars to  
anyone interested in the  
raising of fowls. IT IS AN  
ENCYCLOPEDIA OF CHICK-  
ENDOM, and no one can well  
afford to be without it.  
Will be mailed to anyone  
upon receipt of only 15c. Money refunded if not  
pleased.

C. C. SHOEMAKER, Box 605, Freeport, Ill.

PREPAID TO YOUR ADDRESS—For a limited time only, just to introduce our line of poultry supplies.

**Complete Poultry Outfit, \$1.00**

Consisting of the following articles: One galvanized (cone shaped) water fountain, one dry masu (Economy) poultry feeder, one grit (Economy) poultry feeder, one beef scrap (Economy) poultry feeder, one oyster shell (Economy) poultry feeder, one Modern Poultry Equipment booklet, one Success and Profits in Poultry Feeding. All bright new goods, carefully packed, delivered direct to your door, without any extra charges to you. Mention A. P. J.

**POULTRY APPLIANCE COMPANY  
967 16th ST. :: MILWAUKEE, WISCONSIN**

**Bourne "Bignum" Poultry Band**

Patent applied for.

Send two 1 cent parcel post stamps for samples and trial offer. Large numbers showing ten feet away. First to use numbers you can see. Best band out. Sizes for Bantams, Leghorns, Rocks and Reds. Black numbers from 1 to 100 on white, light blue, pink, green, yellow, cherry, and red celluloid. Withstands weather and water. State size, color and numbers wanted. Send cash with order. Price 3 cents each, \$2.50 a 100.

**Bourne Manfg. Co., Box M, East Saugus, Mass.**

**R.C. MINORCAS**

First prize winners New York, Chicago, St. Louis and elsewhere. Trap-nest bred for egg production. Stock and eggs for hatching, at all times. Catalogue free

**G. A. Clark : Seymour, Ind.**

# Poultry Books

## AT A CUT PRICE

A complete list of poultry books that everybody interested in poultry should have. This list is made up with the idea of supplying the wants of all poultrymen, and covers about every phase of the industry; in fact, this list of books make almost a complete poultry library, and by taking them all at a cut price you will be well equipped to make a success of this business. The books in this list tell you how to line breed, how to feed for egg production, how to reduce your feed bill, how to mate to produce exhibition birds, how to prevent and cure diseases, how to mix a balanced ration, how to build poultry houses, poultry appliances, etc. Following is the list:

### DR. PRINCE T. WOODS' NEW BOOK HOW TO RAISE CHICKS

128 PAGES—35 ILLUSTRATIONS

A down-to-date manual on breeding poultry. Tells in plain language how to select and mate breeding stock, what to feed and how to feed it, how to care for and manage breeding stock, how to select eggs for hatching and how to care for them before and during incubation, how to get good hatches with incubators, how to raise chicks with hens and brooders, how to prepare home-made chick foods, how to build brood and colony coops. It also gives facts about White Diarrhoea, including prevention and treatment, and much other valuable information that cannot be obtained elsewhere. Price 75 cents.

### OPEN-AIR POULTRY HOUSES FOR ALL CLIMATES

By Prince T. Woods, America's Leading Authority on Practical Poultry Keeping

The best house book ever published. Be sure to read it before you build or make alterations in your poultry houses. 88 pages and 46 illustrations. Tells how to build the kind of houses that the most successful breeders all over the country are building and recommending. The "Fresh-Air House" has come to stay and you will want to build one. It means better fowls, freedom from disease in the flocks, better egg yield, better fertility, better chicks. No matter where you live, if you keep poultry you need this book. This book gives full plans and specifications. Price 75 cents.

#### Origin and History of All Breeds of Poultry

This book gives a complete history and the origin of all the recognized varieties of chickens, ducks, geese and turkeys, and is illustrated with 198 colored pictures of fowls painted from life, something never before attempted by any publisher. This is, without question, the greatest book ever published on poultry. The artist's work alone on this book took almost one year's time to complete, but it shows the fowls in their natural colors and correct shape, and these colored pictures, together with the history of each variety, gives the fancier all the information to produce fowls for either exhibition or breeding.

**How to Mate**—This book also tells how to properly mate the different varieties of fowls to produce birds that will conform to standard requirements. This is something that even the Standard of Perfection does not do. It tells you at a glance what it will take years of practical experience to learn. It is a book that no breeder or fancier can afford to be without, as it is just as suitable for the needs of the experienced fancier as for the amateur. Price \$1.00.

#### Successful Poultry Culture

Contains 128 pages and is a practical treatise on everything you want to know about the poultry business. It tells you his method of saving three-fourths the feed bill, and many other valuable pointers which will save you many times the price of the book.

Space will not permit a detailed description of the entire book, but the following will give you an excellent idea as to its great value. Besides 30 illustrations of standard bred poultry and poultry houses, it contains chapters on the following subjects: The Way to Succeed; Some Interesting Poultry Statistics; The Pleasure of Poultry Culture; Advice to Beginners; Poultry and Pin Money for Women; Boys and Poultry Culture; Poultry on the Farm; How to Succeed on a Small City Lot; How to Succeed with a Large Market Plant; How to Get Eggs in Winter; How to Feed Young Chickens; Success with Incubators; Success with Brooders; How to Cure Diseases; How to Build Poultry Houses; Plans for Model

Poultry Houses; Profits in Poultry Culture; Scientific Feeding. Regular price \$1.00.

#### Diseases of Poultry

By D. E. Salmon, D. V. M., Chief of the United States Bureau of Animal Industry. Every poultryman should have this book in their poultry library. It contains 250 pages, and every disease to which fowls are subject is treated in a most thorough manner. The cause, symptoms and cure of each disease is put before the reader in such a manner as to be understood at a glance. With this book in hand you can be your own poultry doctor. Better order one now and not wait until your fowls become ill. Regular price 50 cents.

#### "Why Poultry Pays and How to Make It Pay"

A book for the beginner in poultry raising and for those engaged in it who are interested in deriving from the business the greatest profit. The book tells you how to start right, how to succeed with poultry, how to line breed, how to win at the shows, how to breed and prepare fowls for market, how to feed for the production of eggs, contains a chapter on poultry diseases and simple remedies for same. Gives instructions on incubators and brooders, much other valuable information and is profusely illustrated with ideal drawings of standard fowls. Price 50c.

#### "How to Build Poultry Houses"

A book devoted to the construction of poultry houses and fixtures, gives plans and specifications for building all kinds of poultry houses, brood coops, nest boxes, dust boxes, shipping coops, etc. It will save money by telling just the kind of house desired for the different localities and the size best suited for the various sized flocks. Regular price 50c.

#### American Poultry Journal Hand Book

Contains valuable recipes and trade secrets, feed, care and management in health and disease. Pocket size, 15 cents.

**Total \$5.15---Cut Price for the Eight Books, Prepaid, \$3.40**

This is a saving to you of one-third from the regular price. Better order now before the price is advanced. If you want only a few of these books send in full price, as no reduction is allowed from the list price unless all eight books are ordered. You need all of them. You can also get any 50-cent book and a full year's subscription to American Poultry Journal for \$1.25, a 75-cent book and a full year's subscription to American Poultry Journal for \$1.40, or a \$1.00 book and a full year's subscription to American Poultry Journal for \$1.50.

**AMERICAN POULTRY JOURNAL PUB. CO.**  
**542 SOUTH DEARBORN STREET, CHICAGO, ILLINOIS**

# S·C·WHITE LEGHORNS THAT LAY, WEIGH AND WIN

There is more real proof in a teaspoonful of experience than in a demijohn of talk.

If you have ever bred the GROVE strain of SINGLE COMB WHITE LEGHORNS, you know from experience that they represent just what we claim for them.

Upon receipt of 50 cents in stamps or coin, we will send you postpaid our new sixty-four page book on poultry, which explains in detail the method of raising, feeding and conditioning line bred poultry for successful results.

# "More Than Pleased"

## That's What They All Say About the "American Poultry Journal Year Book for 1913"

Below you will find a few letters we received from some of the most eminent authorities and experts on poultry culture in this country praising the contents of the "American Poultry Journal Year Book for 1913." Only a few are here given, but we could easily fill this whole page with similar ones. Just read these from men who are capable of judging a book of this character, and then send in your order for the book and if you are not satisfied with it, send it back and we will immediately return your money. That's fair; isn't it?

Hammonton, N. J., June 14, 1913.  
Jas. W. Bell, Chicago, Ill.

My Dear Mr. Bell: I wish to thank you very much for the Year Book, which you so kindly sent me. I shall give you a notice in Farm Journal. I think your effort in this direction is worthy of great credit. Respectfully, Michael K. Boyer.

Oakland, Cal., June 10, 1913.  
American Poultry Journal Pub. Co.

Gentlemen: This will acknowledge receipt of yours dated the 27th, also the copy of your 1913 Year Book for which please accept thanks. Permit us to congratulate you on the interesting character of the contents of your Year Book as well as upon the enterprise of your company in getting out a work of this kind. Trusting it will prove a most successful undertaking, we beg to remain, Very truly yours, American Poultry Publishing Co., W. C. Denny, Sec'y-Treas.

Bridgeton, N. J., June 3, 1913.

American Poultry Journal Pub. Company.  
Dear Sir: Your 1913 Year Book arrived all O. K. I must congratulate you on this book. It is as full of information as an egg is full of meat. No poultryman's

library is complete without this book. Yours respectfully, Louis G. Heller, Poultry Judge.

Springfield, Mass., June 3, 1913.  
American Poultry Journal Publishing Co.  
Gentlemen: Yours of the 29th at hand, also copy of the American Poultry Journal Year Book. A hasty glance through it shows that it contains much valuable information for poultry breeders and exhibitors. Yours very truly, Edwin C. Powell, Editor, Farm and Home.  
Union City, Mich., June 2, 1913.

Waverly, Iowa, June 5, 1913.  
American Poultry Journal Pub. Company, Chicago, Ill.

Gentlemen: Please accept thanks for the copy of your Year Book, which was received a few days ago. You certainly deserve great credit for putting out such an excellent work. Judging by its merits, it should meet with great success. We will be pleased to give it editorial mention in the July number of the Rhode Island Red Journal. Sincerely yours, Rhode Island Red Journal Company, A. G. Studier, Editor.

The great American Poultry Journal Year Book for 1913 contains 379 pages and is chock full of valuable information pertaining to the poultry industry; being a comprehensive and authentic review of the poultry industry for the year 1912; all thoroughly and carefully indexed for instant reference; with three double-page and eight full-page four-color illustrations and numerous black and white plates; also containing the poultryman's calendar; the poultryman's encyclopedia; latest feeding formulas; first, second and third prize winners at nine largest shows and first prize winners at thirty-two next largest shows; poultry show directory; specialty club directory; experiment station directory; poultry judges' directory; report of egg-laying contests and many special articles by leading specialists. Everybody interested in poultry should have a copy of this great book, which cost over \$2,000.00 to produce. Send for your book today. The prices are \$1 for handsome cloth bound de luxe edition and 50c paper cover condition.

### SPECIAL COMBINATION OFFER

Paper bound edition of the "Year Book" and a full year's subscription to American Poultry Journal for only \$1.25, or cloth bound edition and one year's subscription for only \$1.50. For Canadian subscriptions add 25c a year for postage; foreign sub. add 50c.

## Campines--The Coming New Breed

The Improved Silver Campines Are Becoming Popular---They Are the Great Laying Fowl of Belgium *By Dr. J. H. Prudhomme, Thurmont, Md.*

HERE is no one breed now looming up on the horizon that is destined for a bigger run, and one that has come to stay, than the Improved Silver Campine. Campines are the great laying fowl of Belgium, and have been bred for egg laying for many generations. The late Louis Vander Snicht, the acknowledged Belgian authority, tells us that they were well known in the time of Charles V., while no less an authority than Harrison Weir says that, by tradition it dates back as far as 1206. The breed is undoubtedly a very old one, as the people of La Campine district, in Bel-

gium, go so far as to say that when Julius Caesar left the country he took back to Rome a number of these fowl, which the Roman epicures pronounced "food for the gods."

The name Campine is derived from the Plains of La Campine. The Belgian Campine having been bred for so many years on this dry, arid, sandy plain, where natural food is comparatively small, nature has produced a small bird of wonderful activity, although too small to be of much practical value in this country.

For this reason one should be careful in buying the so-called "Pure Belgian Campine," they will be disappointing on account of their small size. And if such Belgian birds approach the size of the Leghorns, or are larger, the chances are that they are the Belgian Braekel, and not the Campine. These Belgian Braekel are a breed of very similar markings to the Belgian Campine, although they average too large in size for best results as egg producers in this country, and have not the activity of the Campine.

The first great improvement over the Belgian birds remained for the people of Great Britain to accomplish. By taking up the small, active Campine of Belgium and infusing some Braekel blood, and then breeding back to the activity of the Campine, they have produced a breed that not only contains all the good qualities of both races, but have improved these and added others, such as their beautiful new dress; yet they have also been successful in retaining the bountiful egg supply.

This new race, the breeders of Great Britain have called Improved Silver Campines. Of this new breed the American authority on Campines, Mr. F. L. Platt, says: "The Belgians have given the English one of the most productive fowls in the whole category of 'everlasting layers,' and our British cousins have dressed the bird in a smart attire, have added to the reproductiveness of the Campine some of the size of the Braekel, and on the hillsides of rigorous Wales have developed a sturdier fowl, the New Campine, and I tell you it is a heavy layer of heavy eggs."

This fowl is coming on wonderfully in England, Canada, the States, and is also wending its way to France, Switzerland, Italy and India. The French have learned the value of the breed their neighbors have bred for so long and there is a growing demand for the pullets of this strain, for "Madam" is thrifty, and she must have laying pullets in winter.

Even dwellers in Southern India, we are told, intent on

supplying the requirements of "Mem Sahib" with white eggs of high quality, are breeding Improved Silver Campines largely and include them amongst favorite breeds for that land.

Canadian breeders find that a bird that lays large eggs constantly when the thermometer is way below zero is not lightly set aside, and are taking up this breed with characteristic energy. From a personal letter from a Banker of Ontario, Canada, I quote the following: "They (meaning the Campines) are really great layers. It was 3 below zero this A. M. and in a pen of 12 Campine pullets I got 10 eggs, and these pullets are all day and every day in an open scratching shed. I am in love with the Campines and feel certain they are going to be the boom breed." (Notice, I want to call your attention to "the pullets are all day and every day in an open scratching shed;" this will appeal to Dr. Woods' views on "open poultry houses.") I must quote this gentleman further, he is a reputable breeder. Of one special pullet he says: "The pullet is laying, and although we had it very cold here this winter, 30 below zero several times, she never missed a day laying for four weeks."

English breeders and exhibitors are taking up the breeding of Campines in real earnest and at the Crystal Palace Show of 1911 the entries in the Campine class equalled those of the Rhode Island Red.

In America, in the Fall and Winter, shows at Hagerstown, Baltimore, Philadelphia, New York, Boston, the Campines were well represented; at Chicago the class was large, containing 54 birds. It is a well known fact that the demand for Campines surpasses the supply. Some are so enthusiastic as to declare that the Campine will equal the Orpington in popularity and that they are destined to supplant the nifty little Leghorns on the large egg farms of our country. It would be well then for the wise to take note of the Improved Silver Campine and get in on the ground floor and help boost this noble, useful bird to the front where it belongs.

The Silver Campine is a graceful bird, somewhat similar to the Hamburg, and has a low tail, long body, broad across the shoulders and is built for laying. The neck and hackle should be pure white; the beak and toe nails horn color; ear lobes, white; legs and feet, leaden blue; iris, dark brown; pupil, black; comb, face and wattles, bright red. The ground color should be white, and the scoring should be black with rich beetle green sheen. The barring of the feather should be two-thirds black, and one third white. The ends of the feathers should be white. There are two species: the Silver and the Golden Campines. The Golden should have the same standard substituting gold for silver.

At the Madison Square Garden poultry show the Campine Club of America was organized and the English Standard (above description of the birds) was adopted for judging the Campines in the American show rooms. This standard will be altered to some extent at the meeting of the Club to be held on Jan. 2d, 1914, at the Garden, and a new standard adopted outlining requirements better suited to an American Type of Campine.

Campines are very active, alert, precocious, mature early, are non-setters and are great rangers, which make them de-

sirable for the farm, yet they do well in confinement, and they require much less feed than most other breeds. For egg laying the year round, the size, weight and color of their eggs—they are in a class by themselves, and have already attained fame in America, having repeated their record of last year when for the first time in fifteen years they wrested from the Leghorns the first prize for the best dozen of white-shelled eggs at the Boston Egg Exhibit. There, in competition open to eggs of all varieties, they won first premium for best dozen white eggs, and also won first premium for the whitest dozen eggs at the show. At Allentown, 1912, in a class of 22 dozen, other breeds competing, eggs from Campines won first prize; at Frederick, Md., they won the sweepstakes over eggs from all breeds entered; at Baltimore first prize in their class.

In an article in the American Poultry World, Mr. J. H. Drevenstedt said of them, "Campines (at Boston) made a good impression on all who studied this breed closely. The exhibit of Campine eggs attracted considerable attention, especially from poultry raisers who make a specialty of supplying the market with white shelled eggs. The eggs of the Campine fowls are of good size, and the shell is chalky white."

A portion of the colony houses on the 90-acre range of the Idlewood Poultry Farm, Swanville, Pa.

As an exhibition bird the Campine has not hitherto taken as high a plane as its beauty entitled it to, the show cage hardly shows off the lustrous beetle green sheen that is one of the attractions of the breed. They look best wandering about in the meadows, and few sights are more attractive than a flock of these birds scattered over the lawn, headed by a virile, majestic cock, who, from appearance,

looks as "proud as a Peacock," Monarch of all he surveys.

You will find that the Improved Campine originated right in the home of the Campines. Quoting Mr. Platt: "The first hen-feathered cock came from the yards of Mr. Oscar Thomas, Renaix, Belgium. Renaix is in southeastern Belgium, near the French border and it is in this district that the Braekel chicken is grown. This cock was exported to England and there bred for the sake of the new fashion which it had set."

"The Braekel may be said to be the backbone of the new Campine. Crossing has been easily possible and quite practical. The Braekel contributed some good qualities to the new Campine.

"This Braekel in Belgium lays a larger egg than its sister, the Campine. It gave to the new Campine more neat qualities, for the Braekel is a delicious table bird and much larger than the industrious little Campine that one sees on the sandy plains of La Campine."

Now, in conclusion, and in order to make the point more clear, I will make the following comparison: That as the recognized motive power of the Esquimaux is the Esquimaux dog; the horse is generally used in the temperate zone; the

llama is better adapted to the narrow, winding paths of the Andes; the water buffalo is more suited to the Philippines; the camel to the desert. Conceding this to be an unequivocal fact, upon this same theory is the little Campine better suited to the dry, arid, sandy plains of La Campine; the Braekel to the rich, fertile country of southeastern Belgium. Then so is the Improved Silver Campine best suited to the idiosyncrasy of the English fanciers and breeders, and, finally, so is the Improved Silver Campine type best suited to the wants of the American fanciers and breeders.

Why? Because the public wants them. The public creates the demand and the breeders cater to that demand. Here is the proof in this day's mail. A customer writes me: "I have some of the best stock Improved Campines from . . . . and from . . . . direct. Now I would like to get one dozen chicks from your best pen. I want to keep my stock up both in egg production and in feather, etc.—A. E. C., Philmont, N. Y." This is characteristic of the American. He is wide awake; he keeps his ears to the ground; he selects the best type of a breed, and he wants the best that can be had. In this case it is Improved Silver Campines, and none other, believe me.

# Getting Started With Practical Poultry

Some Criticism and Numerous Common Sense Observations in Regard to Breeding Chickens

By H. H. Stoddard, Riviera, Texas

WHEN I am not tired of reading about "bowel trouble" in young chicks, fighting mites, greasing under side of wing for lice, fifteen or twenty things to feed brooder straddle-legged, sleepy unfortunates to keep the breath of life in them, the evils of "too much corn" and a lot of other things that there would be no need of talking about were the management correct, then most likely I come across the old advice regarding "going slow." Now, there are times, of course, when would-be breeders for exhibition purposes, who have not learned the A, B, C of the fancy, should

proceed very carefully before spending money freely, and there are city bred people who ought to keep a dozen fowls a while before trying large numbers; but when it comes to commercial poultry raising it is so different from small scale operations that one may keep a small flock and "go slow" for a lifetime and know next to nothing about the fundamental principles of a business egg ranch.

Illustration: Thousands of people ply the hoe in family vegetable gardens. They run the whole gamut of radishes, lettuce, peas, asparagus and numerous other vegetables, and succeed. Let them come to a commercial truck district and make vegetables their business and they will have to change their methods almost entirely. Now, there are many who come to the district to follow trucking who have never dabbled in gardening at all. Here comes a party who has spent his working years in a city store or workshop. Would you say to him, "Get a lot of seeds and a new hoe and work a year or two on a sixteenth of an acre garden," or would you say, "Get the best books on trucking as a business, and visit the large fields where truck is successfully grown"?

## Another Illustration

A young man has worked by the month and saved a little money. He wants to run a small country store of his own, devoted to general merchandise, embracing groceries and provisions, flour and feed, dry goods, hardware, harness, furniture, clothing, hats, shoes, books, stationery, notions, and even a few common drugs and medicines.

Very properly he serves a term in a store of just that sort, in a distant place, and waits on customers in every department, and under agreement with his employer takes lessons in accounts and in buying as well as selling.

Now, here is another young fellow who, fresh from school, has inherited a big lot of money and wants to run a large store in a great city, say, a clothing or hardware business. Of little use it would be to him to serve the same apprenticeship as the other man. To learn a thing, work at that thing.

You may sail a fishing smack for years, but will only learn how to do things on an ocean liner by working on one.

Commonly the poultry husbandry department of a state station is for the benefit of the farmers with whom fowls are a side issue, and the institution also teaches judging by the Standard. This last is all right with cows, swine, etc., for the standard with these animals is based on utility. But Standard poultry matters are related not to an industry but to an amusement, and it would not be legitimate to use public funds on card-playing, baseball, golf or other amusements.

Everything necessary to teach respecting the management of poultry on a farm can be learned in a short time by students going the rounds of model farm flocks, supplemented by lectures; and though books are good, too, in a way, formal recitations based on these are comparatively unimportant. Poultry books should be used as school readers are, and read aloud in class.

There should be a poultry farm for the food market exclusively, operated on a large scale, by aid of the latest science, and operated at a profit, too, instead of being a burden on the college funds. Special films for the movies, of course. If not paying well, this model commercial farm would not be a proper lesson. Production will be furthered—real, genuine production of wealth. The much-lauded farmers' flocks, even those the best managed, are

poor producers because the marketing part is necessarily faulty.

Eggs from farms as gathered and shipped are substantially second-class and always will be. No amount of instruction will ever create the requisite vigilance. A rigid law, fining for selling eggs in the hot months, except from roosterless flocks, would help some but merely mitigate the imperfections that hang around the egg trade of the small scale operator, especially when the weather necessitates gathering eggs often and caring for them afterwards properly.

So hard it is to get good thorough work out of the ordinary farmer family, or suburban family, along strictly high-class egg lines, that parties shipping their own guaranteed eggs, who have tried procuring eggs from neighbors to piece out their own during lulls in laying, almost always give up the practice after a few trials, even in cases where it would be of great advantage to all concerned could it be made to succeed.

A neighbor—raised in a back county of Texas, and entirely innocent of the slightest glance at the broad field of poultry, and who in fact doesn't know that there is any such field—was here today, and, to show off, said he believed in "introducing" a new rooster every year from outside, to freshen the blood. He was a trifle too chesty about it, evidently meaning to convince me that he knew how to dig to the basic principles of poultry keeping.

To call him down slightly, since he is always annoying me by his know-it-all airs, like many other visitors, I replied:

"That is good medicine as far as it goes, but in a region that is really frontier, in a belt of more than two hundred miles in width, the roosters that you pick up to 'freshen the blood,' as you say, are almost always from stock that has been inbred very closely; that is, brother with sister or half-sister, over and over ten or twenty times. 'A new rooster every year from outside' does not fill the bill."

Did I then proceed to tell him what he should do? No. I have learned the application of the "pearls before swine" proverb. Where there has been, through fifty years of backwoods life, no foundation laid for comprehensive ideas, the best way is to save your breath to cool your porridge.

The party is anxious to get lots of eggs, because I showed him two years ago that by packing a crateful gathered with extreme care, rejecting dirty ones and pullet eggs, and shipping them when not over twenty-four hours old, to a high-class hotel as strictly guaranteed, he could get a good price and orders for more of the same sort. He denied it at first and said, "That might do up norf, but folks ain't use to it here."

As soon as he tried it and found that it worked like a charm, he pitched in, and in two years increased his flock from forty to four hundred layers, and, finding that in thirty years of farming he never did a thing that paid him so well, he and his wife and whole family are working like beavers to further increase their number of layers.

But what he should do I will show presently. He wouldn't do it, though, because it would involve an outlay of time and money that he would think was extravagant and unnecessary, and to get snubbed for telling him is unpleasant. It wrenches to kick at nothing. Opposition in the form of argument and reasoning is all right. Then you are kicking squarely at a football and the sensation is agreeable.

It sometimes seems as if so large a proportion of visitors give merely a carping stare, and so few give an approving smile, that I ought to hang on the street gate:

## Original Labor-Saving Egg Farm

Visitors Not Admitted Except by Appointment

Nothing to sell

And nothing to tell

H. H. STODDARD & SON

My neighbor should get from Mr. Jones a new male White Leghorn, the smartest in carriage and spunk he can possibly find in the Jones flock, and yard him with a few hens from Mr. Brown, selected also on the test of vivacity. If the number is too small for the Turk, add some Asiatic hens or some of any dark-egged breed to his flock.

Make up another yard with stock from Messrs. Smith and

Robinson. The next step is to pair the progeny from the two yards, and then there are some "four-in-one" cockerels to be penned separately out of sight of any other fowls of either sex, and from time to time scrutinized carefully and rated for vigor.

Now, what are these "four-in-ones"?

#### Nothing Extra.

The evils of past inbreeding have been partly removed, that is all. Get four other stocks from four other sources, and breed more four-in-ones to mate with the four-in-ones.

When you get some eight-in-one cockerels, after culling them as before described, you will have birds to breed from that are reasonably free from the curse of the neglect and

side could not in the nature of things break up and keep broken up the effects of many years of close breeding.

Well, what happens if a good eight-in-one or sixteen-in-one male is put with a rundown flock of hens? Why, simply this: There is improvement in the progeny, of course, but the excellence of the male is pulled down a peg by the low-down blood, and really the young birds are only a cross between good and bad. To "grade up" any kind of live stock is a work of time.

When Mr. A. and Mr. B., co-operating as above related, manage to breed unrelated sixteen-in-one hens and sixteen-in-one cocks together, that will be going some.

"Why so particular?" the reader may ask. The answer is that the best races of human kind are built up on various combinations of sixteen-in-ones, thirty-two-in-ones, sixty-four-in-ones, etc., line breeding being very properly

#### Prohibited by Law

as an enemy to the state, because fostering incompetency and even idiocy, and letting loose all the diseases in Pandora's box. In the case of all races of domestic animals the evils of incest can be minimized by rejecting, in each generation, nineteen-twentieths and using only the remaining twentieth as breeders; but this cannot be done with the human race. If all were bred from, then in course of time various assaults on vitality, sure to appear, in the course of time would in most cases break down and run into the ground the inbred strain of domestic animals.

Because in certain cases some famous strains of cattle, horses and swine have withstood close breeding, it by no means follows that in general it is safe to practice it. The famous strains in every case were founded on superlatively

malpractice of twenty years or more.

The real scientific procedure is for Mr. A. and Mr. B. to form a mutual aid compact and each separately raise some eight-in-one stock. That is, between the two men there should be used at the start sixteen separate stocks, not one of the sixteen being related to any one of the other fifteen. When A and B exchange eight-in-one breeding birds there will result on the premises of each some sixteen-in-one stock.

On this demonstration chicken ranch there are very satisfactory eight-in-one, but no sixteen-in-ones yet. Time is needed.

The method of a new male every year, from outside, to mitigate the evils of previous close breeding (which are almost invariably present in a state on the outer fringe of the main realm of poultrydom where pure breeds have been cultivated the longest) would do passably well if the new males were always from stock not inbred. But over wide districts such cannot be found, and what happens? The first year the stock is improved a little by procuring a new outside male, and every year for a while the progeny is improved still another peg. After a few years, however, the poultryman's flock is

#### Pretty Fair

and much better than the new rooster he procures. The consequence is that as the "male is half the flock," he pulls down rather than improves, and attempts at "feeding the blood" (to use Uncle Isaac's expression of some forty years ago) by the continued use of inbred sires from out-

fine individuals (like the original Morgan horse, for instance), the products of lucky crosses, and gifted with the mysterious quality of prepotency. Even better and much stronger strains could have been built up by casting about for the best unrelated stock for mates of the phenomenal sport and continuing the crossing. Complex Mendelian laws would baffle, of course, sometimes helping and sometimes hindering, but this has always happened under the inbreeding method. The whole fundamental plan of all living things, animal or vegetable, of all races and tribes, is to outcross with unrelated mates and with those not too diverse in general character.

There is a very general failure to recognize the good effects of outcrossing, whether there is anything the matter

with the stock or not. It is good for any strain, no matter how thrifty. It is not merely a cure for evils following close breeding; it is

#### Good in Itself

and nature's universal prophylaxis as well as universal medicine. It is the very foundation of every improved race of plants or domestic animals. When line breeding is resorted to after benefits of crossing better than usual have turned up, what is this line business for? Why, simply to hold onto the benefits of crossing for fear they will get away from you—that's all.

To show how writers are constantly putting the

#### Cart Before the Horse

I quote from a regular contributor in the late issue of the American Poultry Advocate, as follows:

"Were it not for line breeding we would have no pure races of fowls. Every character of form, feather and fecundity has been stamped and fixed by inbreeding. This could have been accomplished no other way."

Beg pardon. Not so, but just the reverse. Amend, for truth's sake, and make it read, "Were it not for outcrossing we would have no pure races of fowls. Every character of form, feather and fecundity has been stamped and fixed by outcrossing. This could have been accomplished in no other way."

If by race is meant the White Leghorn race, for instance, then it was the outcrossing of centuries before Columbus discovered America that gave the material for its Italian foundation. If by "race" is meant the whole Mediterranean race—Black Spanish, Buttercups, Leghorns, White, Black, Brown and all—then it was built up, strengthened and maintained by outcrossing. The same applies to the Hamburgs, Dorkings, Games, and all other races.

In more modern times was a sub-division of one of these main races (sub-race, really) desired, say a Black Hamburg? A cross of two promising unusually dark birds was

its foundation. Inbreeding may have been resorted to later merely to hold fast what blackness was procured but, mind, the same degree of blackness could have been grafted repeatedly, and finally fixed, and on much stronger stock, too, by repeated selection of dark birds without any line breeding at all, though our writer erroneously says there is no way to do it other than line breeding.

Still another meaning of "race." Suppose it means the made-up breeds, Plymouth Rocks, Wyandottes, and such like. Always crosses to obtain what you want and inbreeding later, for a picket rope to keep it from getting away.

Now, to reinforce my position. Crossing enables remote ancestors to get in their pull. Deleterious influences of weather, diet, attacks of pernicious germs, famines, and such other enemies as beset all flesh, are lying in wait to attack every animal race. By crossing there is opportunity for repelling enemies through remote ancestral influences. Many poultry writers seem to think that disease (or constitution inviting disease) tends to prevail in progeny over the opposite tendency, that is over the tendency to inherit ancestral strength or is at least as potent as the latter. Not so. If there is a streak of extra health and vigor somewhere back among ancestors nature draws on that, when progeny is

formed in preference to weakness. She will go back a thousand years or a million, to get what she needs. Were weakness or inferiority, such as may appear in one of the parents, just as often inherited as good traits are, every race of living things would go to wreck after a while. That is easily seen, for often a parent is in a condition showing something wrong, owing to accidents or transgressions, and were these abnormal conditions as prone to be inherited as normal conditions are, the cumulative effects would in time sweep all living things off the face of the earth.

The writer above quoted says, "An outcross often increases fecundity and sometimes vigor, as the same inherited weaknesses are not apt to be present in both parents, but this is all the effect on vigor out crossing will produce."

In the first part of the quotation, if the words "often" and "sometimes" should be stricken out, the first part would be true. His statement further on limiting the good effects of out crossing is both mistaken and mischievous. The very crossing itself will increase vigor of the stock whether there is weakness in one parent or in both or where there is none in either as all Darwinians correctly contend.

The inherited qualities as a whole, proceed in general one-half from the immediate parents and the other half from all the other previous ancestry put together, so says the great Galton, the father of modern study of heredity.

In the forming of a new being, qualities from every ancestor near and remote are available, and when there is in either parent weakness, or a constitution likely to be unable to ward off disease, Nature selects from the entire stock of traits of the whole ancestry those which will repair the weak places and neutralize what would otherwise be unfavorable heredity. She is by no means compelled to always select just one-half of her building material from the two immediate parents. In general it is about half. If there was a decided cross in the parental union

then there is a greater diversity in the remote ancestry for her to draw on in repairing weak spots than if the parents were related.

Not domesticated races only have been formed by endless crosses through long periods of time, but all wild races, species, and varieties have been made by crossing and when made they

#### Breed True

in a way to laugh to scorn the "fixing the type" of the poultry fancier who inbreeds.

Variations being imminent at any stage in the duration of a wild species, and favorable variations being preserved from time to time under survival of the fittest, it then oc-

curs that the new improved strain, embodying the favorable variations, increases faster than the old but does not run it out entirely. The species is, essentially split, and there is a new sub-species.

What does Nature do? She must check such mix-ups as this or the whole realm of life would be a chaos of different breeds. Anarchy would reign. The answer is simple. The sub-species and the old, cross and keep crossing until the differences are obliterated and then there is what is virtually a new species created, mind, by crossing and not by inbreeding, and thus Nature secures uniformity in the species, throughout its myriads of members, a thing the fancier with his flocks never does by inbreeding.

## An American Hen Now Leading

In the National Egg-Laying Contest, the English Pen is Still Gaining, However---S. C. Brown Leghorns and Barred Ply. Rocks Tie for May

THE American breeders have at least one thing to be proud of in the National Egg-Laying Contest at Mountain Grove, Mo. A Buff Wyandotte hen from Vermont now leads all other hens with 167 eggs to her credit for the six months and a half, or a total of 197 days. An English S. C. White Leghorn hen has held first place from the beginning of the contest. This English pen holds the pen record with a total of 1,338 eggs for this period. This pen has also laid about one hundred soft-shelled and unmarketable eggs, which, if they could have been credited with, would have put them far in the lead. Only nine hens in this pen laid marketable eggs in May and they

are not so far ahead but what they can easily be caught. The total laid in May was 12,455 eggs and this runs the grand total to 59,975. May was the hottest month experienced at this place for more than ten years. We lost two hens as a result of the heat, and this hot, dry weather is affecting our egg record considerably.

A pen of S. C. Brown Leghorns from Fulton, Mo., and a pen of Barred Plymouth Rocks from Sioux City, Ia., tied for the silver cup for May, each pen laying 239 eggs. Two Buff Wyandotte pullets, No. 860 from Vermont and No. 600 from Missouri, each laid 31 eggs in the 31 days. The last mentioned pullet has laid 62 eggs for 62 consecutive days. She will have to lay 20 more eggs to equal Lady Showyou's record of last year.

The pens which have thus far laid more than 1,000 eggs are as follows:

No.	Eggs
2 S. C. White Leghorn, England.....	1,338
19 Silver Wyandottes, Iowa.....	1,108
23 Silver Wyandottes, Illinois.....	1,105
57 Black Langshans, Missouri.....	1,095
20 White Wyandottes, Arkansas.....	1,044
49 Black Langshans, Missouri.....	1,043
33 Barred Plymouth Rocks, Illinois.....	1,041
30 Buff Wyandottes, Vermont.....	1,038
56 White Orpingtons, Kentucky.....	1,018
9 S. C. Brown Leghorns, Missouri.....	1,013
26 Buff Wyandottes, Missouri.....	1,007

It will be seen from the following that every pen of Black Minorcas made a great record for May. The pens laying over 220 eggs each for the month were as follows:

No.	Eggs.
9 S. C. Brown Leghorns, Missouri.....	239
39 Barred Plymouth Rocks, Iowa.....	239
11 Black Minorcas, Iowa.....	235
17 Black Minorcas, New York.....	235
26 Buff Wyandottes, Missouri.....	235
8 S. C. White Leghorns, California.....	225
5 Black Minorcas, Missouri.....	225
10 Rose Comb White Leghorns, Missouri.....	222
2 S. C. White Leghorns, England.....	221
32 White Plymouth Rocks, Missouri.....	221
40 Rose Comb Reds, Missouri.....	220

Two pens tied for first place, three tied for second place, and two tied for third place for the month.

The highest individual record for the first seven months last year was 156 eggs. For fifteen days less time this year,

three hens have already exceeded that record. Lady Showyou had laid 150 eggs by the last day of May last year. The highest records thus far this year are as follows:

No.	Eggs.
860 Buff Wyandotte, Vermont.....	167
66 S. C. White Leghorns, England.....	166
600 Buff Wyandotte, Missouri.....	164
735 Black Langshan, Missouri.....	154
62 S. C. White Leghorn, England.....	154
65 S. C. White Leghorn, England.....	153
61 S. C. White Leghorn, England.....	150
871 White Wyandotte, New Jersey.....	148
55 R. C. White Leghorn, Missouri.....	145
67 S. C. White Leghorn, England.....	144
857 Buff Wyandotte, Vermont.....	144

#### Third Contest for 1914.

The Third National Egg-Laying Contest will begin at the Missouri State Poultry Experiment Station at Mountain Grove, December 1, 1913. Requests are being received every day for places in this contest. Only three pens of ten hens each, or a total of thirty hens of each variety, will be accepted. An absolutely square deal is insured every contestant. Not an egg will be sold from any pens for hatching. Each pen should consist of ten early maturing pullets. Liberal prizes will be offered. All of the leading varieties should be represented in 1914. Write the Experiment Station at once for a copy of the rules and regulations governing this next contest. Liberal premiums will be offered for the best record made by each variety, also sweepstake prizes, and a silver cup for each month. The best breeders of each variety and the specialty clubs should see that their varieties are properly represented.

#### The Feeding Test.

The pen which is being fed according to the Canadian method went to first place this month, and the one with feeds of all kinds before them at all times dropped back to second place. Each pen consists of five S. C. White Leghorns and five Buff Orpingtons. The pen fed according to the Canadian method has laid 930 eggs, and the one with feed of all kinds has laid 928 eggs.

#### Pen No. 66—Egg Farm Method.

This pen is being fed according to the method recommended by a large eastern commercial egg farm. The mash being fed was manufactured by this farm and was bought direct from them. This pen is also fed a mustard bran which is highly recommended by this farm. So far it is 282 eggs behind the above pen which leads in the feeding test.

This pen is fed as follows:

#### Grain.

Winter—	4 parts cracked corn
	2 parts wheat
	2 parts oats
Summer—	2 parts corn
	4 parts wheat
	2 parts oats

Feed a little less than one quart to ten hens only at night. No grain in morning.

One pound of mash to each ten hens.

Use mash and green cut bone.

Add five heaping teaspoonfuls of mustard bran to the mash for every ten hens.

The Missouri State Poultry Experiment Station has just

issued Circular No. 2, which reads as follows and is applicable to other states about the same as it is to Missouri:

#### SWAT THE ROOSTER.

He Spoils One-Half Million Dollars' Worth of Missouri Eggs a Month, From June to October, Each Year.

"Swat the Rooster," should be the motto of every Missouri poultry raiser for the month of June. In fact, conditions are such that the governor would be fully warranted in issuing a proclamation designating the first day of June as "Rooster Day," and urging the farmers and poultry raisers of the state on that day to kill, sell, or separate the roosters from their flocks.

Absolutely millions of dollars' worth of Missouri market eggs are spoiled every summer because they are fertile, and it is the Missouri farmers and poultry raisers who are losing this tremendous sum each year. The eastern egg buyers have discovered by years of experience that ONE OUT OF EVERY FIVE eggs coming from this state is a bad egg, and they make the price to us and our egg buyers accordingly. So it is the PRODUCER who loses, after all.

After the hatching season is over, there is no longer any reasonable excuse for keeping the males with the laying hens. Some people imagine that the hens lay more eggs if the roosters are allowed to run with them. This is a mistake. On the contrary, careful experiments have shown that a flock of hens will actually lay more eggs if the males are not allowed with them.

Because the deterioration which takes place in an egg is not easily visible to the naked eye, as it is in fruits, vegetables, etc., people do not realize the fact that it is one of the most perishable of all food products. This is especially true of the fertile egg. A fertile egg kept in a warm room will become unfit for eating purposes almost as quickly as milk. It is a mistaken idea that a fertile egg has to be in

an incubator, or under a hen, in order for the germ to begin to develop. A very large per cent of the eggs candled out every summer by the carlot shippers and the wholesale egg dealers are fertile eggs in which the germ has started to develop, and then died when subjected to a lower temperature, thus causing decay to set in. A fertile egg, kept in a warm room or hot country store for even twenty-four hours, will be unfit for food on account of the growth of the germ.

INFERTILE eggs, laid by hens with which no male is running, will keep in good condition for two weeks, or even longer, when subjected to a temperature which would spoil a fertile egg in twenty-four hours. To illustrate this fact, a cake was recently baked at this Experiment Station, in the making of which infertile eggs were used, that had been in an incubator for fourteen days, subjected to a temperature of 103 to 104 degrees. The cake was eaten with a relish by a dozen men, who pronounced it first-class in every respect.

When the farmers of this state get to producing infertile eggs during the summer months, they will, as a result, eventually get a much higher price for their eggs. UNTIL they do this, there is not much hope for an improvement in prices.

In conclusion, it may be said that there are five simple rules, which, if carefully observed by our poultry raisers, will increase the selling price of Missouri market eggs to the extent of several million dollars a year, and make them sought after in the fancy egg markets of the world, instead of being, as they now are, practically shunned by these markets. These rules are:

1. Give the hens clean nests and plenty of them.
2. Gather eggs at least once daily (twice daily during hot weather).
3. Keep eggs in a cool place.
4. Market eggs at least twice a week in warm weather.
5. Kill, sell, or confine all mature male birds as soon as the hatching season is over. "Swat the rooster!"

## Making Money From Broilers on Farms

Systematic Methods in Breeding, Feeding and Management Are Essential to Success

By James B. Morman, Kensington, Md.

THE POULTRY SIDE of farming is a promising branch of agriculture. While egg production seems to be the chief end of poultry keeping, the raising of fryers or broilers for the early market may be turned to very profitable account. In my judgment too little attention has been given to the profits which can be made from the culls in chicken raising. With the ruling prices for well-fed broilers weighing about two pounds each, there is easy money to be made by the wide-awake poultry keeper any time of the year.

To secure the highest profits, however, there ought to be some consideration given to preparing the broilers and marketing them satisfactorily. If one's time is worth anything, the question of marketing poultry products with the least loss of time enters into the account. Sometimes it may be best to dispose of broilers to reliable wholesale dealers either by personal delivery or by shipment of stock. In the best markets prices for broilers are high and remunerative. But profits from poultry keeping on farms or on the commercial plant may be increased by means of private trade, for this ensures much higher prices than can be secured of the wholesaler.

With the development of a safe and sound system of postal express, the opportunity for profit making from poultry products was never better than it is at the present time. Under any circumstances, the production of broilers from the culls of the average flock of spring chickens may be made a very profitable source of income at a time of the year when ready money is in great demand, and while one is preparing for a profitable winter egg production. The raising and fattening of young cockerels for the broiler trade in connection with the selection and careful feeding of the most promising pullets make it possible to add materially to one's income providing a sufficient number of the right kind of poultry are kept for the purpose. There are, however, certain factors of success in raising broilers profitably and I propose to discuss them briefly in this paper.

Too many farmers lack system in the management of their poultry. This is particularly true in the middle Atlantic

and many southern states, and some of the experiment stations have recently called attention to this fact. For egg production and the broiler trade these states offer exceptional advantages over many others particularly in the North and West. The moderate winters and early springs make it possible to start chicken raising quite early; and, with careful feeding and management, it is possible to put two-pound broilers on the Washington, New York, and other prominent markets at a time of the year when prices are very high and the demand brisk. The experiment stations in Maryland, West Virginia and North Carolina have recognized the importance and great possibilities of this trade and are exerting every reasonable influence on farmers who keep poultry to adopt systematic methods of raising and managing their flocks.

The most important suggestion is the improvement of farm poultry stock. There is altogether too much indifference regarding the value of maintaining the vigor of poultry no matter for what purpose they may be kept. The farmer who lets his flock run down will not succeed either in the profitable production of eggs or broilers. The experiment stations are constantly urging farmers to be more careful in culling their young birds for marketing purposes or for domestic use. Bulletin 221 of the North Carolina Experiment Station, besides giving the farmers of that state some good advice on fitting broilers for market to put them in prime condition as quickly as possible, adds this statement with reference to selection of chickens for marketing which is probably true of farmers in many other states: "The farmer very often makes a very serious mistake in taking the largest and best developed chickens for market and keeping the smaller and poorer chickens for his own use. This may bring better money returns for the time being, but a few generations of this practice will bring the whole flock to the level of the culls."

Recently a prominent mine owner of Virginia called at my poultry plant with a view of purchasing some stock for his country residence in that state. He informed the writer that the section of country in which he lived was occupied by farmers who owned or rented small farms averaging about 25 or 30 acres; that the farmers depended almost entirely on poultry for any ready money they received, most of the poultry being shipped to Washington, D. C., as broilers when two or three months old; and that the farmers had paid so

little attention to the effects of inbreeding on the vitality, development, and egg-laying powers of their fowls that many flocks had degenerated into puny mongrels which were not fit for profitable broiler trade and of no value as egg producers. Too many farm flocks of poultry in all parts of the country have had the size and vitality of the fowls reduced to a low level by this method of culling young broilers for market.

For the broiler trade, the maintenance of a vigorous line of fowls is the first consideration. Consequently, the pick of the flock from both the male and female sides should be kept on the farm for breeding purposes and the introduction of new blood every year is practically necessary for maintaining the highest vitality of the fowls. While this method of selection may diminish the farmer's income temporarily, it will prove much more profitable in producing a race of more rapidly growing broilers in a generation or two. The ordinary methods of handling and marketing young chickens for the broiler trade can be greatly improved to the great financial advantage of the farmer. The present system, which is typical of a large part of the South, simply results in the farmer cheating himself. Culls which prove of little value for maintaining the vigor of flocks may be easily turned to profitable account by being fitted for the broiler trade without much additional expenditure of feed or labor.

Another consideration of some importance in raising young

chickens as broilers is to keep one or more of the heavier breeds of fowls, such as the Plymouth Rocks, Wyandottes, or Rhode Island Reds. Many markets prefer white-feathered chickens for the broiler trade because the pin feathers do not show so prominently and the chicken presents a fine appearance when well dressed. With the heavy breeds of fowls broiler raising may be made quite profitable, providing the chickens are not marketed too soon. Here is where so many farmers make a grave mistake. After chicks have reached the age of six or eight weeks, they will with proper care grow more rapidly during the next four or five weeks than during the whole first period of their growth. In the commission markets in Washington I have seen so many crates of chickens being marketed for broilers that were not more than six or eight weeks old apparently. If they were older, then they were of very inferior size and quality for their age. The advantages to the farmer in keeping chickens for broilers until they are about twelve weeks old are that they require less care, grow more rapidly, and will bring a higher percentage of profit on the basis of feed consumed than for the first eight weeks. There is no reason why the farmer should forego these advantages for the benefit of the wholesaler or jobber.

If young chickens intended for broilers are sold a few weeks sooner than they ought to be, they do not always pass into the retail trade without further fattening. Many crates of young chickens sold to commission men for broilers are

either sold again to persons who make a specialty of fattening them for a special trade or they are bought by private residents of city suburbs, who feed them for a month or two longer before using them for the table. The rapid gains during these few weeks make of it a very profitable undertaking by either party except the farmer. He has deprived himself by premature selling of his chickens of at least 25 per cent of the profit he might have had by holding his broilers until they were at least twelve weeks old. These are some of the most important elementary factors which make for success in broiler raising.

#### Practical Feeding and Management.

Few farmers realize that chickens grow much more rapidly than any of our domesticated live stock. The weight of a newly hatched chick is about 1½ ounces, but a chick of the heavier breeds of fowls should with proper care weigh about two pounds when ten or twelve weeks old, or nearly 25 times its original weight. This extremely rapid growth requires systematic and liberal feeding if chickens are intended for the best kind of broiler trade. In this regard, one of the most rapid periods of growth is between the ages of eight and sixteen weeks. Up to the time chickens are selected and culled for the making of broilers, I give them all the same kind of care. The first aim, of course, is to avoid losses by death, and to this end little chicks are fed only dry feed and are provided with well-lighted, dry quarters until they are six or eight weeks old. Then, if the flock is large, the less promising of the cockerels should be carefully sorted from the others and fed by themselves. With small flocks of chickens, say from 100 to 150, this separation is scarcely necessary, as liberal feeding for a few weeks at this age will be of advantage to all the growing chicks. Under no circumstances should the pullets be sold for broilers. With the growing demand for fall and winter egg producers, it is far better to keep the pullets to maturity when they can always be made to yield a profit if kept for egg production by the farmer, or can be profitably sold for this purpose to others. This is another advantage of keeping good stock on the farm. For the rapid growth of a small number of broilers, I have found the following method very successful:

The chickens are first given a little cracked corn and wheat thrown into some litter in their quarters about six o'clock in the morning. About eight o'clock they are let out of their pen into a limited grass range where they are given a hearty wet mash composed of four parts bran, two parts wheat middlings, and one part each of corn meal, meat meal, and cracked corn. If sour milk is on hand this is used for wetting down the mash; if not, water is used supplemented by the wastes from the table, the whole being moistened only sufficiently to make a light, crumbling mass. At noon, the chickens are given all they will eat of a grain mixture composed of two parts cracked corn and one part each of wheat and oats. The same grain mixture is given again at about six o'clock and a small amount sometimes just before they go to roost.

In addition to the limited grass range, the fattening cockerels are provided with water-tight shelters from the wind and rain, plenty of fresh water, and oyster shell, sand, and grit. It is also to be borne in mind that growing chicks require a large amount of lime and phosphorus for the formation of bone and tissue. To meet this demand and hasten their rapid growth, they should be liberally supplied with abundance of mineral and animal feeds. It is true that chickens have the power to a limited extent of making use of these elements derived from inorganic soil sources; but as some soils are deficient in lime and phosphorus, no mistake can be made by supplying the chickens with oyster shell and animal protein feeds like beef scrap, meat meal, cut fresh bone, or waste milk products.

While there are, undoubtedly, many improvements which can be made in methods of poultry management, there is certainly no greater need at the present time than more systematic methods of raising and marketing spring broilers. The improvements here suggested are derived from personal experience. If practiced to a larger extent on the farms of our country, they would not only mean more dollars in the pockets of farmers from the sale of broilers; but, by building up more vigorous flocks of fowls, the egg production would be increased, which would mean additional profits without more labor or expense. These are prospects to which our farmers should give due consideration.

#### A Test of Profits.

The prevailing high price of all kinds of meat has had its effects in raising the price of poultry. Broilers are usually sold live weight. The farmer spends no time in killing and dressing his stock, and this in itself is no small factor at a time of the year when time is valuable. Providing the cost

of raising broilers is not excessive, it is a branch of poultry keeping which takes little of the farmer's time and labor. This in connection with the price at which broilers can be sold makes the matter worthy of trial. To this end I kept an account last year of the cost of raising broilers, and I append an itemized statement of the cost of raising 52 spring broilers to the age of twelve weeks. The feed bill was approximately as follows:

Cracked corn .....	\$ 4.00
Wheat .....	1.45
Meat meal .....	1.00
Bran .....	1.60
Middlings .....	.80
Corn meal .....	.90
Oats .....	.65
Oyster shell .....	.15
Total .....	\$10.55

This shows the cost of raising a broiler for feed alone to be a little over 20 cents. Adding 5 cents as the value of the egg from which the chick was hatched, the total cost is about 25 cents.

At the time the broilers were twelve weeks old they weighed from 2 to 2½ pounds each. The wholesale prices

for large lots on the Baltimore and Washington markets ranged at that time from 25 to 27 cents per pound, jobbers' prices on small lots being still higher. A broiler, therefore, of the weight given was worth at wholesale prices from 50 to 68 cents. This gave a clear gain of from 25 to 43 cents each as the income for labor and profit—a gain over cost of production ranging from 100 to 172 per cent.

If, however, the farmer can build up a private broiler trade, which is possible in many parts of the country, there is opportunity for still higher profits. Retail prices and private trade prices are at least 5 cents higher per pound than the wholesale or jobber prices, so that on this basis there would be a profit of about 200 per cent above the cost of production. The profits in systematic broiler raising, therefore, are sufficient to attract attention in this day of severe competition and high prices.

It is to be regretted that our farmers do not pay more heed to the poultry side of farming. By selling chickens for broilers from four to six weeks sooner than they ought, by keeping small breeds of fowls, and by a lack of attention to the maintenance of the vitality of their flocks, many farmers are to-day cheating themselves out of legitimate profits which would not only pay them interest on their investment, but would give them paying returns for their labor. Surely these plain facts and figures are worth considering.

## How to Get the Best Value

Work Should Be Arranged Conveniently and Records of Receipts and Expenditures Kept *By Mrs. E. F. Hammersley, Kingston, Mass.*

**A** WOMAN'S WORK in caring for poultry may be much or little, as she has the ingenuity to arrange it. After one has worked with great inconvenience with equipment which uses up both time and strength unnecessarily, it is time to exercise a little thought and energy in bettering conditions. Women have from time immemorial clung to the same utensils used by their grandmothers in preference to adopting many of the newer labor-saving devices for lessening the burden of household drudgery. In her work with poultry she has for the most part been content to follow along the same lines, her labor

being considered of little value and consequently of not sufficient importance to be considered. Women are now, however, getting to the point where, if the whole or a part of their time is spent in work with poultry or gardening, or any other line of work, there must be sufficient in the way of remuneration to make it worth while. This means that a woman who undertakes a line of work with the determination to succeed in it is going to figure out the best means of getting best value for the time she spends on it.

My work with poultry has been of short duration, but in that time I have been able to discover a good many ways of saving time and steps in my work. For instance, we fitted up the southeast corner of the barn for poultry, dividing it in four pens and in order to have it strictly an open-air apartment we added a lean-to after the style of the front section of the Woods' open-air house. This projects out about seven feet from the main building and is tightly roofed and covered with wire netting on three sides, the fourth side being the barn to which it is attached. This open-air compartment is easily constructed and inexpensive and solves the problem of open-air housing when the whole or part of an old building is used. But the fault I have to find with mine is that it is too low for convenience, being only about four feet high where it joins the other building and sloping down to about three feet at the outer edge. Six or seven feet at the highest part would be none too high, with a slope down to five or six feet, and the saving in time and temper would be well worth the added expense.

In hatching chicks I have used hens exclusively and am well pleased with the results. The main secret in handling broody hens is to give them a chance to do their best and then let them alone. They will not stand for too much interference on the part of their owner. After the chicks are hatched and with a good mother they need the same treatment. I have lost very few, raising about ninety-five per cent. Hawks are at present out worst enemy. For these I know of but one remedy and a neighbor, who is also interested in poultry, has this season shot eight full grown hawks,

all of which were hovering over his chicken field. Last week I armed myself with a shot gun and felt quite proud to injure the wing of a hawk who was hurriedly making his escape from my back lot with a February hatched chick. He dropped the chick, but was not sufficiently injured to drop himself.

In the care of chicks I give them a good grass run, as I consider plenty of green food and open-air quarters half the battle. One good mother hen brought out thirteen chicks from thirteen eggs on the 24th of February and in less than two weeks they were chasing all around over the snow. They are now well developed chicks and have not had a single setback.

A very important part of the poultry woman's work is that of keeping accounts. I feel that too much stress cannot be laid on this matter. So many of us are so apt to be slipshod and careless, or feel that we are too tired to attend to it at times, and so get out of the habit, but it is the only way of knowing just where you stand. I take a great deal of pride in keeping an exact egg record of my birds and have from the start. If it is of no greater value than that of the encouragement it imparts, I am fully repaid for my effort.

Herewith is a record for one year from a pen of 47 White Plymouth Rock pullets:

January .....	421	August .....	538
February .....	859	September .....	459
March .....	998	October .....	197
April .....	648	November .....	62
May .....	786	December .....	219
June .....	627		
July .....	444	Total .....	6,258

Line-breeding involves inbreeding, but is not inbreeding but only the breeding in line of a certain strain of fowls with a definite ideal in view. As generally practised line-breeding consists of carrying several lines of blood within the same strain and mating together birds unrelated or only very distantly related and only inbreeding when some desirable variation in type or color appears that one desires to finally fix upon the entire strain.

Practically all breeds and strains of fowls were produced by inbreeding. And not only breeds of fowls but of horses, cattle, sheep and swine were also produced by inbreeding. The Hereford and Polled Durham cattle, for instance, were each produced from a single cow. But inbreeding to produce a new breed is generally very different from inbreeding an old established strain. Most all breeds have been produced by inbreeding, the product of a cross of two or more breeds. By the crossing a great variety of types and colors are produced and likewise great variation in the internal organism of the different birds. Because of this variation one may inbreed much longer and closer than would be possible with an old breed, having established uniform characteristics.

WE LEAD  
OTHERS FOLLOW

60,000 A. P. J.'s FOR JULY, 1913.

State of Illinois, County of Cook, ss.:  
G. M. Atwell, president of the Atwell  
Printing House, Chicago, being duly  
sworn, certifies that the American Poul-  
try Journal has contracted for printing  
and binding sixty thousand copies of  
the July, 1913, issue.

G. M. ATWELL.  
Subscribed and sworn to before me this  
17th day of June, 1913.  
(Seal) HENRY G. EISERT,  
Notary Public.

## OUR GUARANTEE.

We guarantee our subscribers against  
loss due to fraudulent misrepresentation  
in any display advertisement appearing in  
the American Poultry Journal, providing  
the subscriber when ordering the fowls  
or merchandise states that the advertise-  
ment was seen in the American Poultry  
Journal, and places the order during the  
month or months in which the ad is in-  
serted in our columns and notifies us of  
the fraudulent misrepresentation of the  
advertiser, giving full particulars, as soon  
as it occurs.

## Go to Atlantic City.

Whether you are a member of the  
American Poultry Association or not,  
if you are interested in poultry, we ad-  
vise you to go to Atlantic City in Au-  
gust and attend the 38th annual meet-  
ing of the A. P. A. If you are not a  
member it will be a good time to join  
during the convention. You can at-  
tend the meetings whether you become  
a member or not, but every live poul-  
tryman ought to get into the associa-  
tion and help boost for better things.  
You can do your part if you will.

The program for convention week  
will be found in another column. Read  
it. You find at least a dozen reasons  
why you should go to the convention,  
do you not? The place is right. The  
time is right. And if you go you will  
have a right good time and get some  
right helpful information.

Everybody ought to visit Atlantic  
City at least once. It is worth travel-  
ing a long distance to see the sights  
of the original "Queen City by the  
Sea." There is only one of the kind  
and you want to see that one. Whether  
you live inland or on the coast you will  
find interest and pleasure in an excu-  
sion to Atlantic City. August is an at-  
tractive time to visit the seashore and  
you can make convention week at At-  
lantic City a memorable vacation. You  
need a vacation excursion, anyway,  
don't you?

Railroad rates from your home town  
to Atlantic City and return should be  
the lowest summer resort excursion  
prices. See your local railroad agent  
and get special rates for the conven-  
tion. If he hasn't got them, tell him  
to ask "the man higher up" and re-  
port to you.

A. P. A. officers assure us that At-  
lantic City hotel rates will be moder-  
ate and that good accommodations can  
be had as cheaply as in any city in the  
United States. On arrival, report at  
once to the Entertainment Committee

Look at the address on your wrapper.  
See that it is absolutely correct and no-  
tify us of any mistake, no matter how  
slight. Note the expiration date which  
appears thereon, as American Poultry  
Journal stops with the issue marked on  
your wrapper.

If you change your address give both  
your old and new address as well as your  
subscription number when notifying us of  
the change.

AMERICAN POULTRY JOURNAL is  
the oldest poultry paper in America. It  
has a national and world-wide reputation.  
The best writers on poultry matters con-  
tribute to its columns. It receives the  
patronage and endorsement of the fore-  
most representative breeders of standard  
poultry and manufacturers of poultry ap-  
pliances in the country.

at A. P. A. headquarters, Hotel Den-  
nis, and you will be shown every cour-  
tesy and directed where to find com-  
fortable hotel accommodations that are  
within your means.

Atlantic City abounds in all kinds of  
amusements. The five miles of board-  
walk along the ocean front, with its  
many pleasant resting places where you  
can enjoy the sea breezes and view the  
crowds, is sure to hold your interest and  
afford you much pleasurable entertain-  
ment. Don't miss it.

Go to Atlantic City for the conven-  
tion.

## Boomerang.

Australian natives have a singular  
weapon known as the boomerang which  
when thrown by a skillful man will  
travel a long distance to strike a blow  
and then return to a point near the  
thrower. It is said that a clumsy  
thrower may be hit and injured by the  
return of his own missile. Frequently  
the intemperate abuse of others, by a  
man who misuses his editorial privilege,  
acts like the boomerang in the hands  
of the clumsy native and injures only  
the man who makes the foul cast.  
"Nuff said!"

The following letter is only one of  
many received the past month refer-  
ring to a lengthy editorial in a well-  
known poultry journal for May:

"Sir: After reading about 4½  
pages in an American publication  
regarding a certain breeder who  
was found guilty of faking in the  
showroom, I was amused to find  
so many faked pictures of 'win-  
ners' in the same journal.

"When a breeder does any fak-  
ing in the showroom, he is attempt-  
ing to deceive the judge (one man)  
which is the definition in the  
Standard. When a breeder has a  
faked picture published in a poul-  
try journal he is deceiving thou-  
sands of people; in fact, every-

body who sees the journal (which  
is 60,000 in this particular case,  
according to their guaranteed cir-  
culation) and with the assistance  
of the publisher.

"The editor of the journal re-  
ferred to evidently thinks it is all  
right to retouch a photo to the ex-  
tent of rounding out the breast,  
nicely arching the neck, putting a  
beautiful curve on the back, short-  
ening up the tail, etc., and in parti-  
colored birds replacing defective  
feathers with perfectly marked  
ones, and then publish this 'ar-  
tist's dream, as a true likeness of  
the winner of first prize at some  
great show. But it was a terrible  
crime for this particular breeder  
to 'daub on' a little coloring on a  
couple of wing feathers on a live  
specimen.

"Now, I don't believe in this  
faking of any kind and would like  
to see the poultry press do more to  
stop it, BUT I DON'T BELIEVE  
IN SINGLING OUT ONE MAN  
AND KICKING HIM WHEN HE  
IS DOWN. I believe in practic-  
ing what you preach and I also be-  
lieve that 'to err is human, to for-  
give divine.'

"I would like to see you (the  
daddy of them all) give us an  
article on this faking and show us  
the difference between the show-  
room and the poultry journal va-  
rieties.

"Yours truly,  
"W. M. K."

Toronto, Canada.

We believe it is up to the American  
Poultry Association to draw the line  
between faking and "conditioning"  
for the showroom and between actual  
and retouched portraits for publication.  
Undoubtedly there is much question-  
able "conditioning" of birds which  
gets by without punishment. Like  
many other cases of violation of a  
written law, there is a tendency to

make a "goat" of the man who gets caught. It is all wrong to so apply punishment that it makes it appear that the crime is in "getting caught with the goods," rather than in breaking the law, but it seems to be the way of the world. The man who steals a loaf of bread to fill a starving body may get a long sentence, while the man who steals millions to gratify his greed and lust often goes free. Until we breed and educate mankind differently things are not likely to change much in this respect, and betterment will be a gradual process.

Making laws and rules won't help matters much. It has been said that laws and rules are only made to be broken, and it frequently appears that way. Forbid a thing, say "thou shalt not," and immediately a desire is created for the forbidden thing.

Faking will cease only when men become sufficiently sportsmanlike to desire to win on merit. There is no credit in winning on a faked specimen. The poor dupe, who essays to deceive the judge, deceives himself most of all. He knows that if he wins, he wins through fraud and he can't get away from it in his innermost consciousness; he knows he is a fraud, that he won by fraud, and that the winning had no merit of true sport and fanciership in it. There is a satisfaction in winning on a specimen that was bred with care and skill and that won through real merit, that can't be had through winning on a specimen that gets by because it deceived the judge. Commercialism has more to do with showroom abuses than all else and it is doing its best to make "fancy for fancy's sake" a dead letter. Sportsmanship and the love of true standard-bred merit ought to count larger than it does, but in too many instances dollars and advertising, and anything to get 'em, appear to be the main object.

Conditioning for the showroom should never be more than training and grooming the specimen to present it in clean and attractive condition. More than that is faking and the man who denies this knows all the time he is in the wrong. There are some men who bleach plumage and dope legs, lobes and head parts, who would consider it a crime to pull an off-colored feather. There are those who will pull an offending body feather, but speak with horror of the guilt of one who pulls a flight or colors a tiny spot on a feather that cannot be removed without being missed. Individuals differ in the interpretation of the law and of the manner in which the line shall be drawn. Yet, unquestionably, conditioning a specimen so that blemishes are blotted out, covered up, or removed is faking under the Standard.

Why not cut out all the disqualifications and show the birds "as is"? Disqualify only for changing the natural and normal appearance of the specimen. Perhaps that might help. Perfection is a rare bird and we have yet to see a specimen that does not sport a blemish.

As to illustrations, we would like to see actual unretouched photographs of fowls in natural poses. The fowls as they really look and are. But the pictures are made to please the owners and how many owners will be satisfied with photos that are not idealized? They want a picture that will show the bird as they would like to have it look rather than as it is. Faking is

wrong, there is no right about it, and it is just as bad to fake the picture of a bird as to fake the specimen itself. In actual deception of the buying public the faked portrait is probably the worst fraud.

In brothels and other places where cowardly bullies congregate the fashion of "putting the boots to a man" or "kicking him when he is down" was started long ago. Report says the practice then was, after the victim had been downed, for the valorous bullies to jump on him with both feet and endeavor to mark up his features with their heavy boot calks. The person resorting to such practices is seldom held in much esteem, though he is sometimes feared by those unable to strike back. Maybe atavism is responsible for the outcropping of such tendencies.

The man kicked usually gets sympathy and sometimes more substantial benefits. In the case referred to by our correspondent the breeder who has been the object of so much editorial boot-putting has thereby been injured very little, if at all, and has received many hundreds of dollars' worth of free advertising that has brought him business as well as sympathy, and letters in plenty to other publishers condemning the "putting the boots."

#### Billingsgate.

According to scientists the spring of 1913 has been a period of general unrest, social, civil, commercial and terrestrial. "Mebbeso!"

At all events, it appears that there must have been some unrest in some joint editorial offices, or in the editor's liver, if the flow of vitriol and billingsgate in certain May journals is noted. My! My! What a siege of brainstorms!

We clip the following quotation from A. P. W. editorial, together with Editor Turner's comment from the Philadelphia North American for May 25th:

"The following appears in the May edition of the American Poultry World:

"In speaking of the big vote cast in this year's election, the editor of the American Poultry World states, as a matter of course, it is the keen race for the presidency that brought out the large vote, and he states that it will be a sorry day for the American Poultry Association when its highest positions of honor and usefulness have to go a-begging for capable representative men to fill them. The editor further states, that the disgruntled knockers, who have been unduly criticising the vote-by-mail features of the present constitution of the American Poultry Association, doing so on the ground that but a small portion of the membership takes a sufficient interest in the affairs of the organization to fill out and send in their ballots, will have to revise their plan of attack—either that or they will keep silent on this point for the present.

"This 'knocking' crew is a measley and mangy bunch, at best, in the opinion of healthy-minded, red-blooded folks. As a general rule, they consist of soreheads, who realize that they could not be elected to office, or of men who once held office and failed to make good.

"Honest, helpful, constructive

criticism is all right—but there is a wide difference between this and, first, the unasked-for carping of high-brows, who never-were-it; and, second, the empty, 'slams' of has-beens, who are astonished that good work should be done and real progress made after they have given up the helm and vacated the ship—by invitation or otherwise.

"We imagine that the editor would be surprised if he realized that others, surely his equal in every respect, differ with him. We are told that even Rip Van Winkle woke up at last. There is hope for others. Proverbs xxvi, 12."

While the editor is looking up the text suggested for his benefit by Mr. Turner, we would recommend that he read Matthew vii, 3. Also Bobbie Burns' tender lines "To a Louse," which run:

"O wad some power the giftie gie us,  
To see oursels as others see us!  
It wad frae monie a blunder free us,  
And foolish notion."

#### Separate the Sheep from the Goats.

We note that D. Lincoln Orr decided to vote against Chicago as a permanent home for the A. P. A. as a rebuke to the editor of this journal for running the advertisement of a certain breeder who was expelled from the A. P. A. four years ago and who many considered was punished with undue severity because of powerful influence working against him.

We wonder what has happened to so warp the disposition of the genial miller, or is he simply playing his instrument to the tune of "the man higher up"? No man in this world is so free from fault that he can afford to refuse a helping hand to one who has committed a fault and been punished for it, if that one appears to be making an effort to make good.

Mr. Orr makes his position look worse from the front by submitting that others may have committed as bad an offense, or worse, adding to it this opinion: "I say that does not make any difference. THEY HAVE NOT BEEN CONVICTED. A man is supposed to be innocent till proved guilty."

Can it be that Mr. Orr is an exponent of the creed that the real crime is GETTING CAUGHT in wrong doing? Why not separate the sheep from all the goats?

We don't know just how common faking may be. We have heard a lot of prominent men make light of it and joke about it, just as they will make light of other forms of wrong doing when the man doesn't get caught at it. If it is true that faking is common, there ought to be a way to stop it. Mr. Orr, as a judge, and the other poultry judges could put a prompt check on such practices if they would disqualify every specimen that has the appearance of being faked and would report all such cases, preferring charges with the show management and to the American Poultry Association, with a clear statement of the facts in the case. At nearly every big show we hear a lot of TALK about faking. Talk don't amount to much. If any person attending a poultry show has knowledge of a faked specimen being on exhibition, it is his duty to report it immediately and insist that the case be investigated. Don't wait for the man to

get caught and convicted and then jump on him. And, for goodness' sake, don't go around blowing your bazoo of gossip and innuendo just to make talk and to circulate rumors. If you know anything that ought to be shown up tell it to the proper authorities and stand back of it with the courage of your convictions. Play the game and help to make exhibiting the clean sport it should be.

It is no excuse for faking to fake because "others do it." There is a lot of rot about doing in Rome as the Romans do. Clean sport should be CLEAN. Birds should win on merit as they are bred and grown, not as they are doped up for show by a man skilled in "conditioning." If we should credit "rumor," which we don't, one could easily believe that "conditioning," like charity, covers a multitude of sins. YOU, reader, know best whether you play the game with clean hands or not. We don't believe that one offense ought to condemn any man for all time, but we'd like to see the person who does wrong made sorry for it and resolved not to offend again. **PLAY THE GAME WITH CLEAN HANDS.**

### Official Program of Atlantic City Convention.

Thirty-eighth Annual Meeting of the American Poultry Association, Atlantic City, N. J., August 11th to 16th, 1913.

Headquarters, Hotel Dennis, Atlantic City, N. J.

All meetings of the association will be in the Greek Temple on the Million Dollar Pier, and will be open not only to members of the American Poultry Association, but to the public generally.

**MONDAY, AUGUST 11TH, 9 A. M.**

Meeting of the Executive Board in the rooms of the Hotel Dennis. Sessions of the Executive Board will be held Monday afternoon and evening.

**TUESDAY, AUGUST 12th, 9 A. M.**

Meetings of the Executive Board will be held morning, afternoon and evening.

**WEDNESDAY, AUGUST 13TH, 9 A. M.**

Thirty-eighth Annual Meeting of the American Poultry Association called to order by the president.

Address of welcome by Charles D. Cleveland, president of the New Jersey Branch.

## Don't fail

to place your order for a son of Rockland 1st. He is one of the grandest Single Comb White Leghorns ever bred. Selections made in October, first come, first served. Write today, mentioning A. P. J.

**Ridge Egg Farm—The Dictograph Farm**  
K. M. TURNER, Prop. WEST NYACK, N. Y.

Address of welcome by Governor of New Jersey.

Address of welcome by Mayor of Atlantic City.

Response by Reese V. Hicks, president of the American Poultry Association.

Roll call of members by states.

Approval of minutes of last meeting.

Report of election commissioner.

Election of Board of Review.

Appointment of Committee on Credentials. (All credentials must be in the hands of the secretary before opening roll call.)

Report of Executive Board on applications for membership and charters granted to branches; annual report and recommendations. (All reports open for discussion as soon as made, and motions to carry their recommendations into effect.)

Annual report of the secretary.

Annual report of the treasurer.

Report of the Finance Committee.

**1:30 P. M.**

Report of Board of Review, under suspension of rules.

Report of Committee on Credentials.

Branch reports (all reports must be in writing, signed by the branch president and secretary, and in the hands of the secretary of the association before reports from each state are called for. No verbal reports or comments will be allowed.)

Report of Committee on Bureau of Lecturers, W. Theo. Wittman, chairman.

Report of Committee on Education and Experimentation, Prof. James E. Rice, chairman.

Report of Committee on Plymouth Rock Breed Standard, Arthur C. Smith, chairman.

Lecture: "The Science of Artificial Incubation," by W. R. Graham, poultry husbandman, Ontario College, Guelph, Canada.

Adjournment.

**7:30 P. M.**

Report of Standing Revision Committee on 1915 Standard, Reese V. Hicks, ex-officio chairman. (Bring your Standard with you for reference as to suggested changes.)

**8:30 P. M.**

Lecture: "A Review of Progress," by James E. Rice, professor of poultry husbandry, Cornell University, Ithaca, N. Y.

**THURSDAY, AUGUST 14TH, 9 A. M.**

Report of Standing Revision Committee, 1915 Standard (continued).

Report of Committee on Show Supplies and Blanks, W. Theo. Wittman, chairman.

Adjournment.

Trolley ride and clam bake at Longport.

**1:30 P. M.**

Report of Text Book Committee, Reese V. Hicks, ex-officio chairman.

Consideration of proposed amendments to constitution and by-laws.

Report of Market Poultry and Egg Standard Committee, R. H. Essex, chairman.

Report of the Committee on Government Co-operation, Chas. T. Cornman, chairman.

Report of Committee on Publicity, Frank B. White, chairman.

Adjournment.

**7:30 P. M.**

Address by Dr. Mary E. Pennington, chief of government's food research laboratory, Philadelphia, Pa.

Lecture: "Breeding for Egg Production," by Dr. Raymond Pearl, biologist, Maine Agricultural Experiment Station, Orono, Me.

Lecture: "The Science and Practices of Poultry Feeding," by T. E. Quisenberry, Missouri State Poultry Experiment Station, Mountain Grove, Mo.

**FRIDAY, AUGUST 15TH, 9 A. M.**

Inauguration of new officers.

New business.

Adjournment.

**1:30 P. M.**

Report of Executive Board; judge's licenses granted; new members elected; standing committee on announcements; election of treasurer announced.

Election of election commissioner.

Unfinished business.

Adjournment.

**7:30 P. M.**

Lecture: "The Commercial Egg Farmer," by R. C. Lawry, vice-president of the Yesterlaid Egg Farms Co., Pacific, Mo.

Lecture: "Common Poultry Diseases," by Prof. F. H. Stoneburn, poultry expert, Philadelphia, Pa.

Lecture: "Rearing Chickens," by Prof. Horace Atwood, poultry husbandman, West Virginia Agricultural College, Morgantown, W. Va.

Lecture: "Environment the Determining Factor in Production," by H. R. Lewis, poultry husbandman, New Jersey State Agricultural Experiment Station, New Brunswick, N. J.

**SATURDAY, AUGUST 16TH.**

Organized trips to leading plants and centers of production, by members desiring to visit these.

A number of entertainments, such as surf bathing, at all times on the world's greatest amusement beach, dancing in the Million Dollar Pier ball room, and many other amusements may be indulged in by those who desire.

Every member can, at his leisure, as a guest of the New Jersey Branch, take the benefit of an ocean chair ride the length of the board walk (about five miles) and also have the privilege of guides in viewing the city.

**Notice of Revision Committee Meetings.**

Meetings of the Standard Revision Committee will be held at Indianapolis, Ind., July 8, and at Atlantic City, N. J., on August 9, 1913.

Hours and hotels where meetings will be held may be had later by writing the chairman, as these details have not yet been arranged.

All persons, specialty clubs and associations having changes to suggest in the Standard of Perfection, are requested to either appear or send representatives to one of these meetings.

Reese V. Hicks,  
Ex-Officio Chairman.

Topeka, Kan.

## Martin's Regal Summer Sale

In order to make room for my large flock of rapidly growing chicks, I am offering for sale, 400 selected breeders at very low prices. Send for free sale list, giving description and prices, also 20 page catalogue. Eggs from prize matings, \$2.50 per 15, \$12 per 100. As usual Regal White Wyandotte Chicks will be winners at the early shows. Will have matured cockerels and pullets by September 1st. Book orders early. Mention Am. Poultry Journal.

**JOHN S. MARTIN BOX 51 PORT DOVER, CANADA**

### Death of Dr. Guy Blencoe.

Dr. Guy Blencoe was born at Alma Center, Wis., September 12, 1873, and died at the same place June 5, 1913, of chronic liver ailment, for which the most skilled physicians were unable to give relief. His illness covered a space of about three months, the last few weeks of which he was confined to his bed. He leaves to mourn his demise a wife, a son four years of age, with other relatives and a host of friends.

He was in his fortieth year and cut down in the midst of the hope of a bright future. He resided at Alma Center all his life, excepting the time he was at Normal School preparing to teach, and later, while he was at Ann Arbor, where he took a course in dental surgery, which profession he has followed in his home town for the past ten years.

He has held various offices of public trust, and was a member of the High School Board, at the time of his death. He was a man of high ideals and sterling integrity, and those who knew him best respected him most.

He has been engaged in breeding pure bred poultry for the past eight years, during which time he has built up a business with a reputation for square dealing that is national in extent, and among his many customers and associates he has gained many warm friends.

In establishing his poultry business he exercised the same good judgment that has been characteristic of all his undertakings in life. He secured the best that money could buy for his foundation stock and the wisdom of this method has been demonstrated in his successful winnings at Chicago and other prominent shows, and the many winners he has supplied his customers with, for shows both east and west.

He was very thorough in everything he undertook and the foundation he so wisely laid, richly deserved the success he attained. In his untimely death the poultry fraternity has lost a faithful friend and ardent supporter. But the plans he so carefully made will be carried out by Mrs. Blencoe, who has been his faithful coworker and wise advisor in all his poultry work. Mrs. Blencoe is

well qualified, both by training and ability, to assume the larger responsibilities now required of her. Their yards contain some of the best S. C. White Orpingtons and Anconas to be found anywhere, and with the assistance at her command, the business will progress in the future as it has in the past.

### DR. WOODS' NOTES AND COMMENT.

1913 seems to be full of war talk of one sort or another and the poultry field doesn't escape. War at any cost! Peace at any price! Won't somebody please find a happy medium.

Forget your troubles and plan to attend the American Poultry Association's thirty-eighth annual meeting this summer. If you are not a member, now is a good time to join. Everybody interested in poultry will be made welcome.

"The time" is August 11 to 16. "The place" is Atlantic City. If married, take "the girl" along. Bachelors needn't pine, for there will be plenty of American beauties on the sands and on the board walk.

We hope that the dove of peace will hover over the meeting, or roost on the presidential chair, and that no one seeking free advertising will desire an investigating committee to give 'em a spotless coat of whitewash.

We hope to visit the great summer poultry show, to be held on the Million Dollar Pier at Atlantic City, July 4th to September 1st, during convention week. Last summer we were disappointed as we were unable to get to Atlantic City until after the show had closed. We understand that great preparations have been made for this exhibition; that it will be given double the space occupied last summer, and that the list of entries is large, with promise of many fine specimens well worth seeing.

Massachusetts Agricultural College is to hold a three-day poultry convention

July 28, 29 and 30. Prof. J. C. Graham has arranged an excellent programme and on the last day of the meet the Massachusetts Poultry Association will convene. Among the speakers announced are J. L. Nix, of the Prairie State Incubator Co.; Prof. James E. Rice, of Cornell University; Franklane L. Sewell, Dr. Geo. S. Gage, Prof. E. M. Lewis, Geo. S. Eastman, H. D. Goodale and Henry Dana Smith.

Joseph Tolman, Rockland, Miss., reports an exceptionally good day-old chick season. Joe is enjoying himself these days and has a new Reo auto, with all the latest electrical equipment. When we stopped at his place one bright May afternoon he was just getting ready for a "75-mile spin after supper."

We note that R. P. J. accuses Mr. Bell, editor of this magazine, with sordid reasons for accepting the DeGraff advertising. Rot! We happen to know the facts. Several reputable publishers, after conferring with one another, decided to again accept Mr. DeGraff's ads, believing that he had been sufficiently punished for the offense he acknowledged several years ago. At the New York show Mr. Bell put the matter up to us and said he considered that Mr. DeGraff had been punished enough and that he believed he was playing the game fair and square, but that before he joined the others in accepting the advertising he would like to have us express an opinion on the subject. We agreed with him that the man ought to have another chance to make good. We know that Mr. Bell is not the kind of a man who sells his opinions, and he is prompt to turn down advertising accounts regardless of money loss when he is convinced that there is anything seriously wrong with the advertiser. He views both sides of a question before he makes a decision and, when his mind is made up, you can depend upon it that he does what he believes right, whether his pocketbook suffers or not. We are willing to bank on Mr. Bell's judgment, because we know it will be calmly and fairly given. We have never seen any ranting, raving

**U. R. FISHEL'S AD in this issue will interest you. Read it.**

## RUDY'S PERFECTION WHITE WYANDOTTES

SUPERIOR TO OTHERS THE ACME OF PERFECTION

### Eggs for Hatching

Get the best you can for your money. Don't buy eggs from questionable stock. They may be somewhat cheaper, but the outcome of the hatch will look the part.

Rudy's Perfection Wyandottes are known all over the country as the peer of the Wyandotte.

Get my mating list—free for the asking—and see the reasonable prices at which you can buy eggs from the Grandest Matings obtainable.

If you want to know all about breeding White Wyandottes, send for my Art Catalog. Absolutely the best book of its kind. Gives full information on how to succeed, how to take care of baby chicks, what to do when your fowls are sick. An article on how to fit birds for the show room is worth dollars to any breeder. Send 10c in stamps to help pay cost of mailing, etc.

Pen of Prize Winners

My display of 40 male birds was the attraction of the great Chicago Show, December 12 to 17, 1912

**Geo. H. Rudy, R. 15, Mattoon, Ill.**

and going off half-cock on his part. He isn't that kind. As for the almighty dollar, the calamity howlers have another guess. We have personal knowledge that James W. Bell will dip down deep into his pocket to help a poor man out of a hole and do it promptly without question and without hope of reward. He isn't the sort that has to look into a man's bank account before lending a helping hand. As for greed and the worship of dollars and cents, we would suggest that those who work in glass houses would be wiser to refrain from starting stone throwing.

\* \* \*

Sometimes a knock proves to be a boost for the man who is the knocker's victim. In the case of DeGraff it looks as if he was getting a lot of free advertising that will bring him more sympathy and business than all of his paid advertising put together.

\* \* \*

A year ago some experiments made with flocks of 100 and 150 females running with several males gave us better fertility than small flocks of 15 and 20 females with one male. While in Assinippi the last week in May we stopped to call on J. H. Curtiss, veteran soft roaster man. He told us that he was convinced from his experience that flocks of 100 females with five or six males would give better fertility and better chicks than flocks of 25 or less. Naturally we were pleased to have this confirmation of our own experience. Mr. Curtiss, by the way, has succumbed to the lure of the automobile and this season is driving a 1913 Ford.

\* \* \*

Have you read The Poultry Index for May, published by The Index Publishing Co., Stoughton, Mass.? The editor has surprised us by talking right out in meetin' and getting a load of indignation off his system. He isn't afraid to say what he thinks. This matter calls to mind that famous saying of Lincoln: "You can fool some of the people all of the time, and all of the people some of the time, but you can't fool all of the people all of the time." Wonder if we are approaching the turn in the long lane?

\* \* \*

When a man does wrong, admits it,

and is severely punished after conviction, he should be given a chance to make another start and do right. It is considered a contemptible and cowardly act to hit a man when he is down under punishment. The fact has been pretty well established through the ages that you can't do wrong and continue to get away with it. And you can't rage through this world like a mad dog biting everybody who gets in your way and continue to be respected by the rest of mankind. When a man lets a malicious temper get the best of his better judgment it is bad for the man and we are reminded that: "Whom the gods would destroy they first make mad."

\* \* \*

The editor of The Poultry Index intimates that among others we may have ventured an opinion concerning Grant M. Curtis. Unless our memory is seriously at fault we clearly expressed all that we had, or have, to say directly and personally to Mr. Curtis, from time to time, during the nine years or so that we were in his employ and our recollection is that we covered the subject fairly well.

\* \* \*

Nevertheless, no matter how righteous the indignation of Editor Standish, and the fact that we appreciate a man who has the courage of his convictions, we think he slopped the ink just a wee bit in his response. We don't like that blanketed reference to a "Massachusetts advertiser." We think he should have named his man, if he has facts to prove that any Bay State man is a "faker and cheat." A statement like that, when not identified, blankets too many good men with an onus that don't belong to them and we do not believe that Mr. Standish intended to do that. We have lived in Massachusetts a good many years and know a good many poultrymen, but we are at a loss to know who the Index refers to in that statement. If he has facts to prove the case, we hope he will present them. Meanwhile, we are going to look upon that part of his remarks as a slip of a zealous but somewhat heated pen.

\* \* \*

From Isaac F. Tillinghast, Factoryville, Pa., we have received a copy of

the first annual catalogue of the American Buttercup Club. The booklet is sold for 25 cents and contains the standard for Sicilian Buttercups, as adopted by the club January 8, 1913, list of club officers and members with constitution and by-laws of the organization, official reports, announcements and Buttercup history. There are nine illustrations.

\* \* \*

We acknowledge from Dr. T. P. Shaw, Department of Physiology, McGill University, a technical brochure on "Digestion in the Chick," an interesting and scientific study of digestion of chicks from one hour old to 24 days old. This is a preliminary report of experiments and statements and not given as final, investigations being continued. The report is too technical for popular reading.

\* \* \*

While Overlanding about Southeastern Massachusetts during May we stopped at the plant of F. S. Keith at Easton, Mass. Mr. Keith is doing a big business in baby chicks and day-old ducklings. Formerly he operated a big market duck plant, but had so much trouble with other residents who objected to a duck ranch near them that he finally switched over to custom hatching, carrying only a sufficient number of breeders to supply special eggs for his incubators. He now contracts with other breeders for hatching eggs and is furnishing chicks from seven varieties of Standard fowl and three varieties of ducks. He is a close student of artificial incubation and certainly is an adept at hatching liveable chicks.

\* \* \*

While in Easton we had good news of that veteran among duck men, James Rankin. We just missed seeing him and hope to look him up soon on our next trip to that vicinity. His friends tell us that he is hale and active and just as interesting and convincing as ever. We haven't had a duck chat with Mr. Rankin for so long a time that we intend to make a special trip to Easton for the purpose. He retired from active poultry business a number of years ago transferring his breeding stock and good will to F. S. Keith, in

# WHITE ORPINGTONS

## Superb Type and Superior Quality

### January and February Hatched Youngsters For Sale

Never have I found young chicks to prove more completely the claim made for them regarding TYPE and QUALITY than does my present young stock. It is indeed a remarkable line of cockerels and pullets hatched in January, February and March. As it is possible to detect any minor faults in birds after they are eight weeks old, and to form a pretty fair idea as to how they are likely to develop, I have placed on sale about 600 of the most promising White Orpingtons ever produced—large, vigorous, massive birds raised on acres of blue grass sod.

#### OLDER STOCK AT BARGAIN PRICES

Due to the fact that I must make room for younger stock, it will be necessary to dispose of a number of HENS and COCKS on the breaking up of my breeding pens. These, of course, must go at attractive prices, and here is an opportunity to get some foundation stock the stamina and vigor of which could only be arrived at through the wonderful blue grass range commanded by Russell Cave Poultry Yards as a branch of the renowned 5,000-acre Elmendorf Farm. High-Class Exhibition Specimens—I am now prepared to condition birds for the early shows. An extra line of Pure-Jersey young pigs for sale. Russell Cave Poultry Farm Elmendorf Stock Farm Louis Lee Haggin, Prop. R. 3, Box 1025, Lexington, Kentucky

whom he took considerable interest.

Yes, we were bitten by the motorbug this spring and blew ourselves for a 1913 Overland, and now we are wondering how we ever got along without a car. Though the worst roads this side of the Ozarks are to be found in our home town, there are good roads in the towns around us, and we have been neighboring quite a bit all along the south shore the past month. It isn't much of a stunt to visit a poultryman 30 miles away between dinner and supper time at home. We called on half a dozen poultrymen one afternoon recently and when we used to depend on our good black mare or the train it used to take us a whole day to make a short visit to one of them. From the indications this season the up-to-date poultrymen are finding that the modern motor car is a necessary part of the equipment and the best part of it is that it enables one to give a lot of pleasure to other members of the family while making business trips through the country and saving much time. We are very glad the bug bit and bit hard.

In a letter dated June 2, Secretary S. T. Campbell, of the American Poultry Association, writes us in regard to the Atlantic City meeting, August 11th to 16th, as follows: "A good many members are of the opinion that the expenses while at Atlantic City, should they attend, will be very high. Won't you please state in your journal that we have been quoted rates from several good hotels that will accommodate visitors with rooms at rates ranging from \$1.00 per day up. We have every reason to believe that this will be the most largely attended, as well as the best, meeting ever held by the American Poultry Association."

We are sorry that Secretary Campbell

did not send us a list of the best hotels quoting moderate rates. We would have been glad to publish same for the benefit of members who are strangers to Atlantic City and who do not know where to go for accommodations when they get there. We wrote to the secretary of the New Jersey Branch for a hotel list and rates, but at time of writing we have had no reply.

A state branch of the A. P. A. has been organized in Idaho and has elected Miller Purvis president and H. O. Tytherleigh secretary. Harry Collier reports that he is organizing a branch in British Columbia. Let the good work go on!

Secretary Campbell says he hopes to report five thousand members at the Atlantic City Convention of the A. P. A. We hope he does and hope also that every member who can will report in person at the meeting. The time and the place is favorable and the convention ought to be the biggest one in the history of the organization. Official program of the convention will be found in another column.

It is a good time now to begin planning for the Panama-Pacific Exposition at San Francisco in 1915. American poultry interests ought to be well represented in a poultry department that will be a credit to our "billion dollar industry" and to all poultrymen. Show your patriotism by doing your part to help. All departments of poultry work should be represented and we would like to see every state college in line to make a big demonstration in poultry husbandry. There have been plenty of appropriations of public funds made to cover expenses of state departments at the exposition and more will be made. Has your state done anything for poultry in this matter?

## \$190 Worth of W. Orpingtons Given Away

Here is an Opportunity to Get Some of the Best  
Blood in the Country Without Cost

Through the courtesy of Mr. Louis Lee Haggin, proprietor of Russell Cave Poultry Farm, Lexington, Ky., we are enabled to offer as premiums to subscribers of American Poultry Journal a \$100.00 breeding pen, a \$50.00 trio and \$40.00 worth of eggs to those who can write the three best articles on "Ten Reasons Why the White Orpington Is the Best Utility Fowl."

The prizes to be awarded as follows: To the subscriber of American Poultry Journal who writes the best article on above subject and forwards same to American Poultry Journal before August 1, 1913, will be awarded a \$100.00 breeding pen of Single Comb White Orpingtons, direct from the yards of Louis Lee Haggin, the great White Orpington specialist. To the one sending in the second best article will be awarded a \$50.00 trio of Single Comb White Orpingtons, direct from Mr. Haggin's yards and to the one sending in the third best article will be awarded \$40.00 worth of eggs from Mr. Haggin's best matings.

All articles to be sent to American Poultry Journal on or before August 1, 1913. This contest is open to subscribers of American Poultry Journal only.

We know there are a large number of

our subscribers who are interested in this variety of fowl who are capable writers and can readily advance ten reasons why the Single Comb White Orpington is the Best Utility Fowl.

Awards will be made by a committee of three, to be selected at a later date.

Announcement of the winners will be made and first prize article published in the September issue of American Poultry Journal.

The articles must contain at least 600 words and not over 1,200. All articles must be written on one side of the paper only.

We reserve the right to retain all articles sent in for competition and publish them if we so desire, whether they win a prize or not.

This is certainly a grand opportunity for subscribers of American Poultry Journal to get a start with some of the best White Orpington blood in the country.

In making this liberal offer to our subscribers Mr. Haggin has only one object in view, and that is to create a greater interest in White Orpingtons and to impress upon the people of this country the good qualities of this truly great variety of fowl.

## Cochin Bantams

Black-Buff-Partridge-White

We wish to state that we have scientifically bred the 4 Varieties of Cochin Bantams exclusively for many years and our strain has proven its exhibition quality throughout U.S. Not only when exhibited by us, but many of our customers have reported marvelous victories, (at such shows as Rochester, Pitts-

burgh, Pasadena and many other renowned shows), which were accomplished with specimens of our strain. Therefore The Real Cochin Bantams, America's Best Cochin Bantams are bred in Ohio at the Wahebe Bantam Yards and such quality cannot be found anywhere else on this great continent. Remember our pens are still mated and they contain the most wonderful quality ever selected. If it is your intention to win this season and to breed winners write the Home of America's Best Cochin Bantams, or you will be disappointed in your undertakings.

Box 13B, Evanston Station Cincinnati, Ohio

# Notes from the Southwest

Conducted by H. H. Stoddard, Riviera, Texas

## VARIOUS THINGS.

IT IS EASY to get up a regular rodomontade about the glories of the Southwest. Much of the stuff contained in the boom literature of the land companies is just that exactly, it is stuff, though couched in terms so alluring it would beguile an angel, accustomed to the best there is.

It appeals very strongly to the indoor mechanic with bloodless complexion such as blacksmiths have, and to the careworn clerk in office or store.

It dilates especially on the ease of getting a living where nature is so kind as to make big bills for winter fuel, clothing and elaborate dwellings unnecessary, and where if we "tickle the earth with a hoe she will laugh with a harvest."

I have tried all along to be fair and tell **The Exact Truth** to the thousands of people who are

thinking of homes where slices off the edges of the big pastures, are surveyed into farms of ten, twenty, forty or more acres, near railroads, and put on sale. Some of these pastures contain over a million acres each like the one bounding Riviera to the west, all fenced and crossed fenced, and occupied by cattle or horses, and recognizing no fences, deer, javelins, coyotes, armadillos, wild turkeys, etc., are mixed indiscriminately.

As far as the eye can reach are great expanses of level prairies, ornamented with little groups of mesquite or live oak, as if for a city park, and "Fair as the garden of the Lord" as Whittier would sing.

The real estate agent, often with no more warm blood than a turnip, building on the natural resources of the country, appeals to inexperienced people with the "back to the land" bee in their bonnets, and they arrive here

utterly unfit to raise anything from the soil where conditions are so strange and puzzling, where certain plants do well only if put out at certain times of the year, and others will refuse to thrive at any season, while still others take to growth as ducks do to water, seed themselves everywhere and thrive like weeds in this rich soil. People sometimes spend all their loose change while learning "where they are at" become discouraged and curse the day they came.

The principal draw backs here are partly climatic and partly owing to the fauna and flora. Of the former there is the

### Heat.

which is almost unbearable when the sea breeze, for some reason, fails to start of a summer afternoon. The wise unacclimated person will do well on such occasions (which however are fortunately rare) to drop work and start for the shade of his bungalow veranda (they call it gallery here) which by the way should be low and wide with eaves far projecting.

The mercury may show only about ninety, it rarely goes higher but somehow the sun's rays seem very piercing. Perhaps it is owing to the air being so clear, or perhaps it is because the rays are so nearly vertical.

Another disagreeable thing is the wind which sometimes blows hard for hours at a time, carrying drifts of fine sand, and at other times sweeps along rain in streams. Such occasions are uncommon however.

In winter, closely following an unusually sultry spell,

### A Norther

will come with a suddenness surprising to the settler who has never experienced one. It does not taper on as winds commonly do, but strikes butt end first, pretty nearly takes you off your feet, and chills your marrow before you know it. The joke is that the thermometer doesn't say it is very cold. It may not be lower than thirty-five or forty, but owing to the temperature regulating machinery of your medulla oblongata having been set customarily the other way here, that is to repel heat, you think you are in the polar regions.

Speaking of the clarity of the atmosphere, this gives some of the most beautiful scenes by night, so resplendent is the moon, and so many more stars are visible than farther north. Summing up: The outs of the climate are not much of a menace because they come so seldom. The weather three hundred and fifty days in a year, is so superb that many big hotels will be built to accommodate one set of visitors in winter and another in summer. One has just been completed at Houston at the trifling cost of three million dollars. Now as for the

### Fauna and Flora

The poisonous plants are few or lack-

**EASTMAN KODAK CO.,**

418 State St., ROCHESTER, N. Y.

ing altogether, but there may be some unknown fungoid growths that cause certain diseases of live stock, and eruptions on the feet of children who go barefoot. Sandals should be worn by all the children, say the doctors.

When it comes to noxious animals, the climate fosters certain micro-organisms like the hook worm germ, invisible at first but later discernible by the unaided eye, and promotes all sorts of insects that prey on crops and necessitate spraying and endless vigilance. Some very important crops however, seem completely exempt; and as regards poultry parasites, readers of this Journal have been repeatedly told that by avoiding the use of lumber the trouble about these foes is completely abolished.

Rattlesnakes? Yes, we have 'em, but they are not much of a menace and dwindle as the land is cultivated, just as is the case in the west, and should deter nobody from settling here.

The marauders that beset poultry, namely coyotes, badgers, skunks, coons, possums, bobcats, chicken snakes, hawks and owls, are not much of a nuisance all put together. When fences and coops are properly built, the percent of loss is now so small as to be negligible. In this district foxes, civets, minks and weasels are unknown.

Mosquitoes? Fewer here than in any part of New England or the Middle West that I ever saw. In some parts of Texas they are terribly horrible and horribly terrible.

The small ants are sometimes a decided pest. Only watchfulness will prevent an occasional raid that they will make by night on a hen and her brood. A preventative is to apply kerosene on the bottom of the coop, whether earth or boards toward night. Not more than one or two coops in a hundred will need treatment anyway therefore this trouble is not serious. The ants also enter houses so that kitchen tables and cabinets must have some sort of cup or dish filled with water for legs to stand in.

Malaria? None, and there is no disease peculiar to the region, while some diseases like catarrh and rheumatism are cured by living here.

The American Poultry Journal having been, historically the first publication to

#### Open Up

the Southwest to this specialty, and show the remarkable and unique possibilities of the region for an immense exportation of poultry products sure to be developed, it seems proper that the outs as well as the advantages should be faithfully depicted, and this task I have accomplished to the very best of my knowledge and ability.

Extenuating and concealing nothing, I say that on the whole this is nearer heaven than any place I have struck yet.

\* \* \*

There are beginners in great numbers who do not know what is meant by the Rancocas unit. It means simply a big flock of fowls, say one thousand or two thousand or more, at one roosting place.

The name originated from the name of a poultry plant in New Jersey where the idea was carried out extensively, and results published in book form. Perhaps the practice originated elsewhere, but at all events its notoriety seems to have sprung principally from the Rancocas Farm.

Way back in 1870, when there were

hardly any poultry books, I published one which declared that large flocks would never succeed. That error and more than a dozen other prominent points good and bad, were caught up and stated and restated in poultry books and papers, and farm papers, for forty years thereafter. This was not because the points were good or bad but simply because my book was the earliest publication in the infancy of first continuous rapid development of that remarkable

and truly gigantic institution, the

#### American Modern Poultry Interest

which now employs thought, labor and capital of so many of our ninety-two millions of people.

There never had been a large flock successfully kept in this country or Europe previous to the latter part of the last century. One was described as carried on over fifty years ago near Paris, the birds being fed principally

Your Choice of

10,000

Ferris Leghorns

## 30% Less Than Actual Value

We raised 10,000 Improved White Leghorns this spring and you can get your pick of thousands of February and March hatched cockerels and pullets at 30% less than regular prices. These birds show splendid development, and they have the low, well spread tails, good heads, with white earlobes and smooth, evenly serrated combs; typical shape in all sections, with long backs and full breasts, and snow white plumage that you must have in order to win. We have been breeding winners for the largest shows for many years. We can furnish you with stock that we will guarantee to win at any fair or show where you want to exhibit. Ferris Leghorns are trapnested and will lay 175 or more eggs a year. We have been breeding them for egg production for more than 12 years. We ship on approval and insure all birds for 30 days. If they get out of condition we stand the loss. *Utility cockerels from \$2.00 up, pullets and hens from \$1.75 up.* We have a number of very choice breeding birds to spare that we have used in our best matings. Write us for further particulars; we will be glad to tell you just what we have. The summer prices make it worth your while to buy now even if you do not need the stock until winter. Males that will then cost you \$10.00 cost only \$7.00 now; the \$15.00 exhibition birds only \$10.50.

## We Can Ship Eggs And Chicks At Once On Receipt Of Order

There is still time to hatch chicks if you can give them good care. Chicks \$5.00 for 25; \$16.00 per 100 in June, \$4.00 for 25; \$12.00 per 100 after July 1st. Eggs, \$1.35 a setting; \$6.00 per 100 in June; \$1.20 a setting, \$5.00 per 100 in July. Safe arrival of chicks and fertility of eggs guaranteed. The above prices are for utility chicks and eggs. See catalog and mating list for prices of trapnested eggs and chicks, also the exhibition pens.

### Our Mammoth 132 Page Catalog is Free

It contains a lot of valuable information and will tell you all about White Leghorns and why they are best. Just write a postal today and let us send it and quote prices. Breed Ferris Leghorns and you will have eggs all next winter and can win wherever you want to exhibit. Take advantage of this summer sale and it will cost you very little to get a splendid start.

### GEO. B. FERRIS—The Ferris Leghorn Farm

905 Union Avenue, Grand Rapids, Michigan

on the flesh of superannuated horses. It was a hoax that had even more than the usual vitality of canards that are interesting to read, and was published far and wide. To the best of my recollection about twenty years were needed to refute it. The ghost would not be laid sooner.

The first large number of fowls under one ownership were either kept in small flocks yarded, or in small flocks scattered on the colony plan.

My guilt acknowledged, following is a quotation from pages 8-9 of this book:

"The domestication of hens was effected by building upon an original foundation. In understanding the nature and needs of fowls, it will assist

ing to manage poultry by thousands, only a proper regard for original nature will prevent failure. According to this nature they live during the breeding season in distinct families under polygamy. Each family group has by tacit agreement a part of the forest for its beat, and the exclusion of strangers of the same species secures privacy and tranquillity. They have their freedom, and in that word are comprehended the needful exercise, sun, pure air, shade and varied diet.

"Some plans upon a large scale have secured small separate flocks without freedom, and others have secured freedom without separation. Small flocks at liberty on district farms are successful because imitating the natural

sub-divide into flocks of one thousand each.

And yet it was true forty years ago, when the above excerpt was published, is now, and ever will be, world without end, that the birds in the small flocks will do better and lay better than the same number of individuals in the large flock. But not enough better to pay for the increased per capita labor and expense. I can see one thing, however, which is, that in big scale operations a destructive and previously unheard of epidemic disease would be vastly more difficult to control and save some birds out of the wreck, in case of mammoth flocks, than if there were smaller ones containing all the same number of birds.

So far as I know now, right down to date, the

#### Method I Would Advise

for anyone making egg farming a business in the southwest, and the one adopted by the new egg farming firm, H. H. Stoddard and Son, is as follows:

Suppose the farm is twenty acres or thirty acres, both being common sizes sold here. Or forty acres would be better. At or near the center of the tract, stake out the convergent yards for three large flocks of layers of different ages, one flock to be killed off every year. You can have one other yard for a flock of sitters, and have space left for a battery of pens for hatching purposes as described in this magazine, June issue 1913, page 970.

Now the idea is to have the four flocks all roosterless, and running on the same range, be it twenty or forty acres it makes no difference. Quarters for breeding birds and hens with broods are to be provided elsewhere.

Each flock must be managed so as to return to its own roost. The entire farm is to be foraged over. Leghorns will travel forty yards very quickly, and this or a little over is the extreme distance they would have to go to reach the boundary of even forty acres, the largest of the farms mentioned. They will range freely over a hundred and more acres.

There will be exceptional cases of a few birds going to the wrong roost at night but it will not happen to an extent sufficient to hurt the plan. A new flock of pullets to be domiciled at a roost in place of the oldest flock just sent to market must be started right, and this is not at all difficult. Simply confine them to the small yard their roost is in, till to them it is home,

Lady Amherst Pheasant as bred by Jennie Milner, Normal, Ill.

if we investigate the condition and habits of the wild parent stock in India, for the nature of any species remains essentially the same for long periods. The transfer of the birds from forest to farm, has affected their life and most important habits surprisingly little. The tame fowls have the same cries of warning to each other, and other language, that observers have found them to use in their native jungles; they still hide their nests in some corner, just as if they were selecting a nook in a thicket, and they are attached to the premises where they live, as they and all other gallinaceous birds are to some small district, when wild. The wild jungle fowl is by no means foreign to our subject; and in attempt-

groups of the wild jungle fowls. But when it has been found that a flock of twenty gave a handsome profit, and the number has been increased to hundreds, with the idea of correspondingly multiplying the gains, an unnatural mob has been formed, the hereditary instincts violated, and laying checked. The confusion has not however, lessened the amount of feed consumed and the pecuniary results have been the wrong way."

Now the experiments at Rancocas and several other places followed by my own Texas experiments have proved the large flocks a success. I should not hesitate (range being of ample area) to have the flock consist of three thousand head, if more convenient than to

## Buff Orpingtons

**MID-SUMMER SALE** I will not only OFFER but will SELL 75 per cent of my 1913 breeders. These rare birds will be sold in pairs, trios, pens or breeding yards of one male and six females—any way to fit the wish of the purchaser. I will mate in the correct blood lines and guarantee my selection or you may return and I will refund your money—The Martz way. Every specimen belongs to my trapped families and worth while to own. If you have the ORPINGTON FASHION PLATE BOOK, send for SALES SHEET; if not, get both—FREE. Mention American Poultry Journal when writing.

**A. E. Martz, Buff Orpington Specialist**

--:

**Box A, Arcadia, Indiana**

sweet home, before they are ever let out on the range.

The strong attachment which fowls have for their roost was recognized when the proverb, "lies are like chickens, they go home to roost" was coined. This trait and the disposition to keep within easy distance of a thicket, form the key to the system shown in Fig. 1.

During the day when at liberty each flock keeps on its own ground quite strictly. Departures from this rule are unimportant. People generally have so little opportunity to notice the behavior of separate flocks from separate roosting quarters turned loose on a large

Before going away a considerable distance from the line of shrubbery they mark well the whole situation, and when a hawk appears, they do not have to lose time looking around to find where their haven is situated. To mix metaphors like the military commander, they know the importance of a base line. Its whereabouts is constantly on their minds.

The coverts may be anything that they can dodge under. Low bushes are more attractive than tall trees. A few boards propped up will work wonders. The Chinese umbrella tree, because it thrives without irrigation and is a quick grower with remarkably thick

and bare, save for grass; and the other is the attraction of the roost.

\* \* \*

In May issue page 856, Irving C. Smith says my paper on the Pearl Bulletin in April number proves nothing and is merely "bold assertion." In the self same April number page 685 Mr. Smith had just been reading the favorable remarks of an authority no less than that of the editor of the Journal himself, to the effect that Stoddard had brought out something. Mr. Smith must be the "bold" one, the lion he is bearding in his den, is not poor me, but the most eminent poultry editorial authority in the world, bar

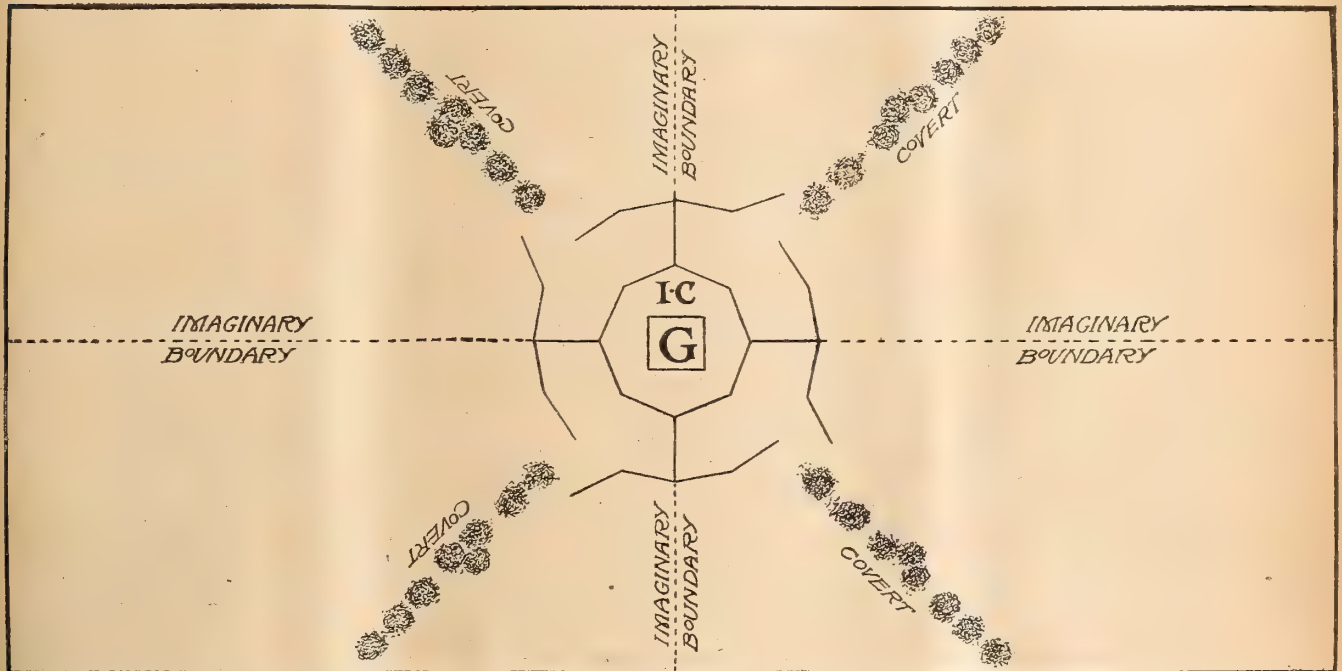

Fig. 1 shows how four large flocks of fowls can range on twenty acres by day, with no fences separating them, and occupy four different roosts by night. The diagram shows combination of three principles: Convergent yards, the colony idea and the Rancocas unit. G granary. IC inner court. See "Notes from the Southwest," by H. H. Stoddard, in this issue.

range that some of my readers will be incredulous.

The invisible wild nature of our domesticated birds can be relied upon every time. If there is anything they hate it is a venture out very far on a level plain destitute of trees, bushes, tall weeds or any herbage taller than ordinary grass. They will do it only when hunger is pressing and insects alluring. If there is a succession of coverts in a line leading forty or sixty rods or more away from home, and the area to the right and left of this line is completely open country, then you may observe that the fowls will spend three-fourths of their time near the coverts, and insect forage will be correspondingly scarce and dusting holes plenty there.

shade will probably be chief perennial and the balsam pear vine, which grows quickly without irrigation or fertilizer, will be the favorite annual, needing only a few sticks with a few square yards of wire fencing attached, and you have splendid covert and shade both.

If starting with new convergent yards with a stock of layers of different ages, let out one flock at a time and accustom it for ten days or so to its own line of coverts before letting out another flock. All it needs is a little diplomacy.

There are two attractions as different from each other as are the attraction of gravitation and the attraction of cohesion. One is the attraction of the covert when the rest of the range is open

none. I am justified in sitting on the fence watching the editor and correspondent fight it out, "go it bear, go it husband."

Want to say just a word, however, about Mr. Smith's preposterous demand for results of my experiments! Why the Pearl Bulletin has been out but a few months! The experiments would need three years at least. What is my critic thinking of? Surely he must have never learned the lesson of the saying, "Even a Deity could not make a two year old colt in a minute."

Three years ago no poultryman would have thought of trying experiments to prove that good laying abilities can descend from mother to daughter any more than of trying to prove that water can run down hill.

# CHAMPION BUFF WYANDOTTES

# WHITE FAVEROLLES AND GOLDEN AND SILVER CAMPINES

White Faverolle eggs, \$6.00 per 15, \$10.00 per 30. Campine eggs, \$5.00 per 30, \$12.00 per 100. A 75 per cent hatch guaranteed or more eggs sent free.

AUG. D. ARNOLD BOX 777 DILLSBURG, PENNSYLVANIA

Shade is necessary for growing chicks and adult fowls. Don't forget it during the hot season. Provide shade and shelter from the hot sun and plenty of places to run under in sudden showers.  
\* \* \*

Supply an abundance of cool drinking water and keep the fountain in a cool, shady place if possible.  
\* \* \*

An abundance of fresh succulent greens is doubly necessary at this season. Keep your flocks well supplied.  
\* \* \*

Don't let lice and mites steal a march on you. They breed rapidly at this season. Use insecticides freely, but observe caution with liquid lice and mite killers, or even plain kerosene, for if fowls get soft parts wet with such liquids blistering will result and you may have some fatal cases.  
\* \* \*

Plan to attend the American Poultry Association convention at Atlantic City, N. J., August 11th to 16th. The Standard Revision Committee will meet there on August 9th. Don't forget the dates.

Breeding stock or layers ought not to be confined in houses at this season, unless the houses are thrown wide open and left that way. The birds would be much better off roosting in the trees in an orchard or grove and would show up in much better condition in the fall. If you want to get a really good summer egg yield, try keeping the flock in a grove that is cool and shady, no house at all and nests placed in cozy spots under trees and bushes. Supply an abundance of food in automatic feeders, provide plenty of drinking water and you and the fowls will have an easier and more satisfactory summer than ever before.  
\* \* \*

Don't permit pests like flies and mosquitoes to breed on your place if you can help it. Mosquitoes will breed in any little pool of still water. A few drops in an old can are sufficient. Common breeding places are uncovered cisterns and rain-water barrels. A very little kerosene on the surface of the water will put a stop to breeding and will kill the female mosquito when she attempts to lay her eggs in the water.

Flies breed in manure piles, vaults and all sorts of accumulations of filth. Scatter or sprinkle disinfectants freely about all breeding places. Keep things cleaned up. Compost should be tightly covered in or screened. Vaults likewise. Flies and mosquitoes are deadly. Destroy all you can. Screen them out of the house and keep all food protected by screen covers.  
\* \* \*

Plenty of clover this year. Cure yours for poultry feeding next winter. Select a good, warm, sunny, breezy day for the mowing. Mow after the dew is thoroughly dried off. Let it lie until evening and then make up into loose cocks. Cover cocks with tarpaulin or canvas covers to keep off the dew. Next morning spread in hot sun and breeze to dry. Do not shake out much. Place in loose bunches to avoid loss of leaves. Before dew falls make up into loose cocks as before and cover. Spread again the next morning and get into the barn as soon as thoroughly cured. Don't let it get wet. Should the clover begin to sweat, turn it over and dry again until it stays dry. When thor-

oughly cured it can be cut into short lengths and stored in bins or in sacks. Scald with slightly salted water before feeding.

\* \* \*

Don't make your plant one of the all work and no play kind. The world wasn't made in a day and the Lord Himself rested on the Sabbath. Get a little comfort and fun out of living as you go along, but when you work work, when you play play. Plan your work so that you can take a little vacation picnic once a week and give the family an outing. It will help you and help them and add a good deal to the efficiency of all concerned.

\* \* \*

Give the fowls a houseless vacation

during the hot season. Get them out into the orchard or grove. If you haven't any grove, rig them up an outdoor roost, enclosed with wire fence, and let them camp out this summer. If you work it right, you will save a lot of time and labor and the fowls will pay well for their vacation.

\* \* \*

While the fowls are out will be a good time to clean up the poultry house and sweeten things generally. Remove all old litter and nesting material and burn it. Sweep down walls and clean out the dust. Remove top layer of earth floor to depth of six or eight inches. Sweeten the whole house by spraying with a good disinfectant solution or with whitewash. When dry put in new, fresh

earth to fill in the floor.

\* \* \*

Whitewash will work better in a spray pump if strained through a coarse screen or through a double thickness of burlap sacking.

\* \* \*

Bury deeply all waste eggs and shells from hatching nests or from incubators. Burn all dead fowls or chicks. A little care here will save you dollars later.

\* \* \*

Have patience with oft-repeated advice for beginners and for small flock poultry keepers. All cannot be big fellows and there is always a big army of small flock poultry keepers who are mightily interested and very much in earnest.

Questions will be answered in this department only when full name and address is signed by the writer.

Conducted by

Prince T. Woods, M. D.

**Toe Picking.**

Q. As a novice in poultry business I beg of you to advise me what to do to break up toe picking in a bunch of White Leghorn chicks. I have one lot about 17 days old and they seem to pick out the biggest chicks. I have a second lot of 240 that are all at it. Old poultrymen here try tar and other remedies applied to the feet and say that if a chick is not vigorous enough to defend itself, to wring its neck, as it is not worth raising. I have tried all methods advised. The last one puts the chicks out of their misery, but the other meth-

ods only prolong it. None of them break up the habit. The first two days I feed very scantily of fine cracked corn and fine cracked wheat, equal parts. The third day on, the corn and wheat in a hopper and a dry mash made up of the following:

- 10 pounds bran,
- 10 pounds corn meal,
- 10 pounds middlings,
- 5 pounds rolled oats,
- 2½ pounds fine beef scraps,
- 1 pound fine oyster shells,
- 1 quart fine white grit,
- 1 pint fine charcoal,

1 pound bone meal.

This is the ration used by the most successful plant here except that they never feed any grit or charcoal at any stage. They keep fine sand in hovers and pens. I tried that, but the sand was so hot and the droppings not absorbed that I took the sand out and put in a deep litter of fine cut hay and the chicks seemed less restless at night. Hovers 3 ft. square, 1 ft. high, heated by gas. Inside pens about 5x7. Outside runs 7x14 and sown to dwarf rape and wheat. Seventy-five to eighty chicks in each hover. Help me out, doctor, as soon as you can. I know you're busy, but would appreciate a short bit of advice as soon as you can conveniently get around to it.

H. W. S.

Vineland, N. J.

A. We wrote Mr. S. substantially as follows: There is nothing more discouraging than attempting to break bad habits of chicks or fowl after the habit is once formed. After they start toe

## GREAT COLISEUM POULTRY SHOW

AT CHICAGO, ILLINOIS

Fifth Annual Exhibition--December 12, 13, 14, 15, 16, 1913

**Our Past Record**—Four of the most successful shows ever held in America. **Our Aim**—The world's greatest poultry exhibition. We have paid more premiums and put on more real down-to-the-minute features than any other show in America or abroad. We lead, others follow. If a feature is good, you will always find us first to introduce it. Nearly every act of the Coliseum show has been followed by other successful exhibitions. Look for our 1913 list; it surpasses all the rest. **No Risk, No Chances, Everything Guaranteed**—We, the undersigned stockholders, pledge ourselves, individually and collectively, to pay every premium offered by us that is won by the exhibitors: Ernest Kellerstrass, Reese V. Hicks, E. E. Richards, Frank Hare, Geo. H. Rudy, Jas. W. Bell, A. and E. Tarbox, D. M. Palmer, J. C. Dinsmore, H. C. Dippel, C. S. Byers, Chas. G. Pape, A. E. Martz, Wm. A. Stolls, C. C. Coulter, Wm. A. Sibley, Theo. Hewes. Premium list Nov. 1st. Entries close Nov. 25. Your name on a card addressed to the secretary will guarantee that list will be mailed on time.

picking or other forms of cannibalism you can't do much to help it. The only thing is to get the birds out on grass range, where they can have plenty of room and to keep them well fed and busy all the time. Prevention is the best remedy. Don't keep your chicks too long in the incubator after they get hungry, and keep the incubator darkened. When they are removed to the brooder keep food always before them. Provide clover litter to scratch in. Don't crowd them. Keep them busy all the time that they are awake. As soon as they get used to the brooder get them to use a run outside of it and increase this run as they learn to use run and brooder properly. An automatic feeder is preferable to a hopper. Keeping the chicks busy and providing an ample green run is the important thing. If you cannot supply a green run, provide an abundance of fresh greens and keep the chicks busy. Idleness fosters bad habits.

Just as we are getting this ready for A. P. J. we received the following letter of thanks from Mr. S.:

"Dear Sir: Many thanks for your kind favor of 19th. I have stopped the toe picking of chicks, turning them into an orchard and grass tract, giving them nothing but a homemade fireless brooder to sleep in at night, although they are less than a month old. Between trying to eat all the bugs and worms in creation and trying to keep warm at night, they haven't time to think of toe picking. Those that live through the ordeal certainly ought to be strong birds and they seem to be enjoying themselves and doing well under the treatment. Two out of 163 have died so far. Again thanking you for your courtesy.

H. W. S."

#### Dry Mash.

Q. Do you consider the following a well balanced dry mash for White Orpingtons, where wheat is fed morning and evening?

60 pounds bran,

5 pounds ground corn,  
5 pounds shorts,  
5 pounds cottonseed meal,  
5 pounds alfalfa meal,  
15 pounds beef scraps,  
5 pounds ground oats,  
6 pounds grit,  
10 pounds oyster shell,  
5 pounds dry bone,  
1 pound charcoal.

For feeding whole grain is a mixture of oats and wheat better than straight wheat, or equal parts wheat, corn and oats?

C. H. D.

Mampa, Idaho.

A. We do not care for the mash formula you suggest. Would recommend that you keep the scraps, grit, shells, bone and charcoal before the birds all the time in separate hoppers or boxes; don't mix them. For dry mash try a mixture of shorts or middlings, bran and ground oats, equal parts. Feed an abundance of fresh greens. You can mix their scratch grain and start with equal parts and then vary it according to their appetites, giving them the most of whichever grain they eat most eagerly. Usually wheat is the most costly grain. Corn and oats will give excellent results all seasons and you can do without wheat except when price of good quality grain favors feeding it as a variety food.

#### Locating a Woman's Plant.

Q. I have been long interested in poultry and intend starting the actual work. I have two places in view: Springfield, Tenn., about 30 miles from Nashville, and the other Pittsford, N. Y., about 5 miles from Rochester. I

think of starting with 200 or 300 White Leghorn pullets and increase my flocks as I can. I propose to do all the work myself at first, perhaps now and then a man for a day. I think of trying capons, too. What breed would you suggest for that branch of the work? Are the locations I mention O. K.? What sort of houses would you recommend for 200 or 300 layers? I wish to economize in labor.

Miss L. W. P.

Indianapolis, Ind.

A. The New York location would probably give best markets and best prices. We do not know anything about local conditions at either place. Unless there is some special reason for the location, it is probable that a plant nearer New York City would be easier to get established, and would probably not cost any more. The Woods open air house 20x20 ft. will comfortably house 150 Leghorns. See book "Open-Air Poultry Houses for All Climates," which may be obtained of Chicago office of A. P. J. at 75 cents a copy. On the Massachusetts South Shore Light Brahmas and Light Brahma males crossed on heavy White Plymouth Rock hens are considered best for breeding for capons. The males of either the Brahma straight or from the cross give a sturdy chick that grows well and that makes a big soft meat chicken when caponized.

#### Small Eggs.

Q. I have 175 year-old White Leghorns. They are laying well, but the eggs are very small. They have been on range until ten days ago. Now yarded in large well sodded yard and

## Silver Campine Cockerels

## Silver Campine Cockerels

I have 50 cockerels for sale, grand birds, beautifully marked, and now between three and four months old. I guarantee each has been sired by

1912—Silver King, First Chicago Cock—1912

Among these are the winners at the 1913 fairs and poultry shows. If interested, write me today.

FRANK E. HERING, South Bend, Ind.

Reference: THE AMERICAN TRUST CO., South Bend, Ind.

the eggs are getting smaller, though the hens are in good condition. Feed corn, middlings and wheat screenings.

J. V. D.

Hermon, N. Y.

A. There is a tendency for eggs to run smaller toward the close of a season of heavy laying. You can help size of eggs by feeding an abundance of succulent greens, keeping a good beef scrap before the birds in a food hopper and feeding plenty of whole corn and heavy white oats in addition to the screenings.

#### Leg Weakness in Chicks.

Q. Please tell me what is the matter with my small chicks. They are 4 or

breeder, over 20 years a leader! Winners at Boston and Madison Square Garden and my customers have won in every good show in the land. Already booked orders for the fall shows. Let me quote you. Beautiful catalogue for 15 cents in stamps.

Arthur G. Duston

Box 1020, S. Framingham, Mass.

5 weeks old and get weak in their legs. They seem to have too large bodies to carry. I feed on chick food and a little sprouted oats, also give grit and charcoal. They are White Orpingtons.

W. H. R.

Sioux City, Iowa.

A. Trouble mostly due to heavy grain feeding and not enough fresh green food combined with lack of exercise. Give the chicks a good grass run. Provide a scratching place where they can work for part of grain. If no grass run available, feed an abundance of succulent greens and keep the chicks busy. Don't overcrowd and don't overheat at night.

#### Two Things that are Not So.

Q. (1) I have been informed that when hens are broken up and not allowed to sit for several years that it seriously affects the egg yield. Is this true?

A. (1) Breaking up broodies won't check egg yield, but will tend to improve it in the flock immediately concerned. We presume you mean the effect of breaking up broodies for several generations. Egg yield probably would not be influenced in either direction by the breaking up practice, in that case.

Q. (2) Why do turnip tops cause hens to stop laying?

A. (2) They don't.

#### Analysis of Hen Manure.

Q. What is the chemical analysis of hen manure and what percentage of each element?

West Roxbury, Mass. J. L. C.

A. Percentages.

	Dried Manure	Fresh Manure
Moisture .....	8.35	45.73
Nitrogen .....	2.13	.79
Potash .....	9.94	.18
Ph'ph'ric acid .....	2.02	.47
Lime .....	2.22	.97
Magnesia .....	.62	..
Insoluble matter ...	34.64	39.32

#### To "Il Drake from Duck.

Q. Is there any way in which the male Indian Runner Duck can be distinguished from the female?

Massachusetts J. C.

A. Yes. The voice is the best guide. The drake makes a hoarse whispering note. The duck has a loud voiced, distinct "quack." The drake should have a hard well curled "sex feather" on tail.

#### Absorbing Yolk.

Q. Please give me some information in regard to the absorbing of the yolk of the egg by the chick before it leaves the shell. I have read in various papers about it, but cannot fully understand it.

Mass. J. L.

A. The "yolk-food" of the egg, contained in the "yolk-sac" is the food of the embryo chick during incubation. The yolk of the egg has two sacs. The smaller one (in the beginning) is the "embryonic-sac" in which the embryo chick is developed. The larger one (in the beginning) is the "yolk-sac." These sacs communicate with one another and the embryo draws on the food in the yolk-sac as it grows. So the embryonic-sac grows larger and larger as incubation progresses at the expense of the yolk-sac which grows smaller as its contents are assimilated. Within a day or two of hatching the yolk-sac, which is still of some size, is

slipped into the body of the embryo chick. Normally this remnant of the yolk-sac is absorbed by the tissues of the chick and dwindles away leaving only a small tab of tissue attached to the intestine. Sometimes it is not fully absorbed and may be found as a hardened sac attached to the intestine in a full grown bird. In some diseases of young chicks the yolk-sac is not absorbed and the contents remain fluid when chick dies.

#### Ration Wanted.

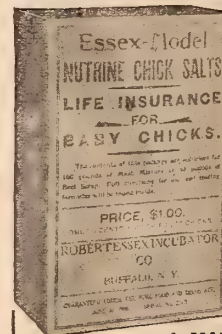

Q.—Do you think this is a good way

## Feed Pearl Grit—It Pays

It's a double-purpose grit. Clean, hard and sharp. Grinds the bird's food—helps digestion. Keeps hens healthy, helps them molt quickly, makes eggs. Send for our new valuable poultry booklet giving pointers and prices.

to feed: Dry mash and beef scrap in separate hoppers. Mash as follows: Bran, 10 lbs.; corn meal, 20 lbs.; middlings, 20 lbs.; ground oats, 10 lbs.; gluten meal, 10 lbs.; oil meal, 5 lbs.; alfalfa meal, 5 lbs. Oats fed in morning. Wheat at noon. Corn and busk-wheat at night. J. R. C.

Elmira, N. Y.

A.—The dry mash will serve well enough, but we would cut out the oil meal and would use cut alfalfa in place of the meal. Would also increase the bran to double quantity. Would feed the hard grain in an automatic feeder and would make it half corn and a quarter each of wheat and oats. If you wish, add just a sprinkling of buckwheat to the mixture. Notice which grains the birds eat most eagerly and then vary your grain mixture to suit the appetites of the birds, giving them

### RANGE-RAISED LAYING-LEGHORNS.

Acknowledged to be the supreme strain for vigor, productiveness and beauty—supreme layers of BIG white eggs: Acknowledged not only by Yesterlaid customers, but by seventeen state colleges and experiment stations that have bought Yesterlaid stock or eggs because of Yesterlaid superiority.

Yesterlaid strain will make good for you on the nest and in the show room, just as it has for hundreds of Yesterlaid customers.

Young and mature breeding stock for sale.

Write for prices and special new customer offer which includes free, a copy of POULTRY—The most scientific, simple and complete poultry book ever written.

Yesterlaid Egg Farms Co., Dept. 5, Pacific, Missouri

what they crave most. From time to time change the mixture according to the way the appetite of flock indicates. You will find after a time that usually good, sound corn and oats are most in favor and will yield you good results. Keep the beef scrap in a hopper by itself. The elaborate mash is not absolutely necessary. A mixture of bran and middlings or of "mixed feed" and cut alfalfa will serve. A change of mash now and then helps to improve appetites.

### Ruptured While Laying.

Q. Some time ago a Rhode Island Red hen seemed sick and upon examination I found that she had ruptured herself in laying an egg and the egg was still hanging with the intestines from her. A few days ago a White Leghorn hen did the same thing. I killed the hen in each case. Can you give me reason for this condition?

Mellen, Wis.

W. P. H.

A. Both ruptures of oviduct (which generally is considered to mean a break in walls of duct) and prolapse or eversion of oviduct and sometimes intestines (everted and protruding from the vent) are of not uncommon occurrence in both young and old fowl. Straining while attempting to expel an overlarge egg is the most frequent cause. Straining because of obstruction in oviduct, (egg bound) or because of obstruction in lower intestine (constipation and impaction of feces) are not uncommon causes.

Usually when the case is noticed it is too late for treatment and killing the bird is the only merciful remedy. When discovered in time remove the cause. Sometimes the injection of warm sweet oil will help to remove the obstruction. If bowel or duct is prolapsed (protrudes from vent), after removing obstruction bathe parts in warm water, dry, and anoint with warm sweet oil or vaseline and replace parts in as nearly normal position as possible. If parts remain in place twelve hours they will usually stay put, though one attack predisposes to another. After parts are in place you can help muscular contraction by applying a bit of ice inside the vent. This will stimulate parts to attend to their natural function. Don't use ergot, with fowls it is a very active poison with far reaching effects. In cases where there is impaction of hard feces (long standing constipation) first, after trying oil injection, see that bowel is thoroughly emptied by giving a good soap suds enema. The soapy water to be injected into rectum should be only lukewarm. At time of giving enema it is good practice to give the bird a dose of 1/4 teaspoonful of epsom salts dissolved in two tablespoonfuls of water introduced directly into crop. Water used for bathing prolapsed intestines should contain a teaspoonful of creolin to half a gallon of warm water.

### Color of Orpington Eggs.

Q. I have two pullets that were sold to me for White Orpingtons and they lay speckled eggs. These are only part of a small flock of Orpingtons and the rest lay brown eggs a little larger than the pullet's eggs. What is the right color of the eggs?

Ada, Okla..

J. C. B.

A. Orpington eggs should be brown. Like other brown egg varieties the color of the egg shell varies from a pinkish or pale brown tint to deep

brown and sometimes the eggs are speckled with brown spots, purplish spots or lighter colored tinted spots.

### Blistered Feet.

Q. My chickens have a strange disease which attacks them at all ages. Their feet swell and a water blister forms on top of the foot and between the toes and in the last stages the blisters form a scab and the toes curl up and they can't perch or scratch to do any good when they get well. At the same time the eyes go shut and their combs swell and there is a yellow watery discharge from comb and feet blisters until the scabs form. Most of them get blind and starve to death.

Snyder, Colo.

M. B. W.

A. This does not look like a disease to us. It seems more probable that the fowls have been blistered by the careless use of kerosene or powerful lice killing liquids on roosts and drop boards or that the fowls have been obliged to walk through some other powerful corrosive that is capable of burning and blistering the feet and from feet and toes is transferred to head parts. Look into the matter carefully and remove the cause.

### Food for Goslings.

Q. What is the best food for goslings? Mine get lame and as I keep

# Newtown "Giant"

## Incubator and Brooder

The purpose of an Experimental Station is to test out methods and equipments for the benefit of the public. The knowledge gained by experiment is distributed and their decision as to the merits or demerits of a method, or equipment, is accepted as final.

## An Acid Test

The Newtown "Giant" Incubator has been put to the test by the New Jersey Agricultural Experimental Station, New Brunswick, N. J. You can read the following letter knowing that every statement made is fact—a true example of the universal achievement of the worthy Newtown "Giant" Incubator:

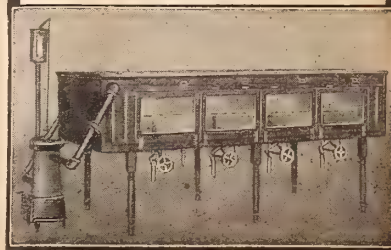

"Newtown Producing Co.,

Gentlemen:—I write to inform you that the 3000-egg Newtown 'Giant' Incubator which was installed in our Department this Spring has given exceptionally good results. After watching the operation of the 'Giant' machine I can say nothing but words of praise in favor of it. I feel that it will revolutionize the hatching of chicks and also the poultry industry, because I think it will be an incentive to centralize the hatching work. I congratulate you upon the efficiency of your Newtown 'Giant' Incubator.

—Prof. H. R. Lewis, New Jersey Agricultural Experimental Stations."

Send now for Incubator Catalog I and Brooder Catalog A and get more proof of the great hatchability of the 'Newtown.'

NEWTOWN PRODUCING CO.  
Newtown, Bucks Co., Pa.

them good and dry I thought it might be the feed.

Colorado

M. W.

A. Fine cut fresh green grass and the tender shoots of sprouted grain. Goslings must have an abundance of fresh greens to do well. They will not stand heavy graining. Get them on good pasturage. They require green food from the start. In addition you can start them on a mixture of rolled oats and bread crumbs moistened until just crumbly for the first week, given three times a day what they will clean up. Then give a crumbly mash of two-thirds bran and one-third corn meal to be fed twice a day as much as they eat up quickly. Add a little beef scrap after the second week. Supply plenty of drinking water in pans deep enough for them to get all of the head in. Above all things see that they have abundant and clean pasturage. Sleeping quarters must be dry and rat-proof. Don't let them have water to swim in until they are well feathered.

#### Questions for the Question's Sake.

Q. (1) How many Plymouth Rock chicks can be raised to maturity on one bushel of grain?

A. (1) Not one. It takes more than grain to grow a chick to maturity. The amount of food eaten by different chicks varies, the time of maturity in different individuals varies, the kinds of food and the qualities of each eaten from time to time vary so much and the disposition different individuals make of the same food is so different, that so far as we know no accurate figures have been obtained showing how much food the average chick consumes from shell to maturity.

Q. (2) What could possibly be the weight of the heavier breeds by September 15, if hatched in the beginning of April and grown under favorable conditions?

A. (2) Ten to twelve pounds each if specially grown for market in case of caponized males. Females eight to ten pounds.

Q. (3) What could be about the clear profit per chick at age of maturity on the heavier breeds when day old chicks are bought and all the grain that is fed to them has to be bought?

Ft. Atkinson, Iowa.

C. B.

A. (3) Don't build up poultry profits on paper with such questions as a base to figure from. Any promoter can figure most amazing profits from poultry if properly stimulated when given paper and pencil, but paper profits don't help much. It takes experience, skill and hard work to get the best profits out of poultry and the most experienced man won't get the same kind of results season after season. Some seasons are lean and some fat in the matter of profits. We know a market poultry grower who during the past season, actual working time eight months, received for 1500 market chickens, at market maturity, about \$3,500. The chickens, food, hired labor, and brooding and housing expenses amounted to about \$1,900. That left the grower a profit of about \$1.07 per bird or in other words he received approximately \$200 per month to pay for his own labor.

#### Thin Shells and Odd Shaped Eggs.

Q. I have eggs that when turned to the light show light or thin spots in shell like honeycomb. Usually they test out clear when incubated. Can you tell me what is the matter. Also get many odd shaped eggs. Hens have range and good food. The hens are healthy and industrious and produce large quantities of eggs, but it is the eggs that need improving.

Chicago, Ill.

C. N.

A. Eggs with thin shells, mottled

shells that show water marks or honeycomb effects, from difference in shell texture, seldom prove fertile or hatch, though we have hatched quite a few such. We don't know what causes the abnormal shell. It crops out from time to time in fowl that produce entirely normal eggs as a rule. Odd shaped and malformed eggs are usually produced by old fowl that are overfat internally or have some obstruction, scar or old injury to egg duct. When produced by young fowl trouble is usually result of surplus of internal fat or of some abnormal condition of oviduct. We know of no remedy that will yield a cure.

#### Poultry Silage.

Q. I keep a small flock of laying hens, and wish to know some way in which lawn clippings of grass and clover may be preserved for winter feeding in a moist half-green condition like ensilage is fed to cattle. Would it be possible to sink some tight receptacle, a closely lidded vinegar barrel for instance, into the ground to keep contents from freezing and pack grass in these? If so, what is the method of treating and storing the grass to keep it from rotting or molding?

Washington, Ind.

L. D. W.

A. We never had any luck with barrel silage. It usually molds. If the barrel can be sunk where it will be dry and where it will not freeze, you may be able to keep the clippings. They must go into the barrel fresh cut and as free from dust as possible. Pack them down tight and hard and put a very heavy weight on them. If the clippings are dried in the shade on floor of barn or shed and then sacked and stored in hay loft they will hold color well and on scalding will look quite green and bright. Better feed the clippings when green and use sprouted oats in winter.

J. C. Fishel & Son : Box J : Hope, Indiana

## CHICK CHATS

By H. P. Schwab

July—with the chicks hatched and ideal weather so far, we can well spare one day to celebrate.

Keep them growing every minute, is the best advice we can give.

Save some of your celebrating for Atlantic City next month, when the roll is called they will all be there.

The program of the A. P. A. meeting has been received, and the only error the committee has made to our notice is that they haven't set aside time for bathing.

In the long run men hit only what they aim at, so while at it let's all aim at something high.

It is up to the breeders of the Empire State, and those of every state, to get together and arrange for a grand poultry display at the Panama Exposition. The commissioners for this State are: J. H. Drevenstedt, D. Lincoln Orr and H. P. Schwab.

The chicken crop is unusually large and with good success will be the best ever. What we have seen of it assures quality of the best.

The New York State Branch A. P. A. election is on, with candidates galore. There is no opposition to the re-election of Mr. Robert Essex for president and Mr. L. D. Howell for secretary, that we know of. We congratulate the members of this state in being assured of these capable officials.

Dr. S. A. Merkley has served for several years as secretary and I fully believe he has done grand work under the conditions. He would have done far better if there had been more harmony. As a member of the executive committee I personally know of all his efforts and wish to commend him.

To speak wisely may not always be easy, but not to speak ill requires only silence.

We are pleased to announce that Mr. W. C. Bowman has taken charge of the Maryland Leghorn Farm, R. R. No. 2, Cambridge, Md. Mr. Bowman knows the Leghorns and has had much experience on large plants, having built up one of the largest and best in this country. Also for several years he has been doing much judging, making a specialty of the Leghorns. His work at Philadelphia, Camden, Trenton, Allentown, etc., was of the best.

Woman—"How did you get that Carnegie medal?"

Tramp—"Heroism, lady. I took it from a guy that was twice my size."

A journal friend of ours is forever discovering something to be thankful for. Here is his latest: "One thing mere man escapes is itching under the corset where he can't get at it."

Time is worth far more than money. Work with intelligence, have a purpose and a reason, and don't let time pass without your best effort.

The pens of Barred Rocks at the Storr's egg laying contest entered by Mr. S. M. Goucher of Moorestown, N. J., and Mr. Robt. J. Walden of Middle-

burg, Md., have brought prestige to these lines by winning three medals for Mr. Walden, while Mr. Goucher's fame rests on a record made by one of his hens of 210 eggs in 259 days.

After all is said and done, you can't well get far ahead of the good old Barred Rocks as producers of eggs, choice meat and money.

Nowadays you don't have to go far to a good show, for there are many good ones in every state, and this season there promises to be more shows than ever before.

We have just received a collection of Barred Rock feathers from Eng-

## Tolman's White Plym. Rocks

Baby chicks, price now, \$12 per 100. When you order from Tolman, you get the best at a popular price. Eggs and chicks now ready. Circular and price list free.

Joseph Tolman -- Dept. H -- Rockland, Massachusetts

## Jersey Lawn White Wyandottes

I have five yards mated for the very best results in show or utility purposes. Cockerels all sold. Eggs, half price for June, \$2.50 per 15. Write for mating list.

Harry Cass -- Buffalo Hart, Illinois

land and from English winners. The female feathers are good, bright and a fine contrast, but the Crystal Palace winning cockerel could not win a 'steenth prize at a Podunk Fair in this country.

Mr. Frank L. Platt, as secretary of the American Dorking Club, has favored us with a copy of the Club Catalogue. Dorkings, as we have before stated, are one of the grand old breeds bound ever to remain, and with a live club to back they will surely gain in popularity as they deserve.

To rest content with results achieved is the first sign of decay.

Make your plans now for the coming show season. The fairs begin next month and before we know it the regular season will be on. Exhibit your stock and if at first you don't succeed,

then try again and keep at it. It is the sure way to poultry success.

The Barred Rock Club Catalogue is in print and the safest way to get one is to join the club. Send \$1 now to Mr. Henry D. Riley, Strafford, Pa. It is chuck full of interesting and valuable articles.

The Specialty Club deserves the support of the breeders, and no club can live or accomplish what it should without this support. It is a matter of personal interest and personal gain to be a member. Do your share and see that your friends do theirs.

"The Lucky Seventh" is the title of a booklet being sent out by the New York Palace show, of which Mr. L. D. Howell, Mineola, N. Y., is the secretary. The book is full of good things and tells particularly of the

Palace features. The show has long been known as one of the very best. Last year its entries were double those of the year before, well showing that it assures satisfaction to all.

#### AWAY FROM DANGER.

With hopeful hint the farmer's boy  
Leaned on his hoe and said:  
"The fish is bitin' fiercest kind  
Down by the mill pond's head."

"Don't be afeerd," the farmer said,  
Dropping a seed or two.  
"Jes' keep on kiverin' 'taters, son,  
'N' the fish they won't bite you."

The Philadelphia, Pa., show dates are December 16 to 20, 1913. With Mr. Frank E. Gilbert, secretary, Mint Arcade, Philadelphia, Pa.

The crested breeds are having their day and if the efforts the breeders are

# E. B. Thompson's Imperial "Ringlet" Barred Plymouth Rocks BARGAIN SALE FOR 1913

First Prize Cockerel and Champion Male and First Prize Pullet and Champion Female at Madison Square Garden, New York, 1913

Is the event in the Barred Plymouth Rocks; this sale stands out with a prominence that is clearly defined.

My special sale list is now ready for mailing and I offer the largest and finest assortment of Barred Rocks in all America at the most decisive price reductions and most emphatic bargains ever recorded.

## This Is America's Foremost Bargain Sale

And goes beyond anything ever before attempted in thoroughbred poultry. It is unprecedented. The resources of my "Ringlet" farm are unlimited and you can now secure Madison Square Garden, New York, winners and sons, brothers, sisters and daughters of New York winners, and birds of this richest New York prize winning blood at the decided bargain prices. Birds bought now at the prices in my special sale list will pay you splendid dividends.

## In This Special Sale List

Are listed the finest show birds, the finest breeders in single birds, pairs, trios and pens that I have ever offered in all my thirty-three years' career as a Barred Rock breeder, and at the rarest bargain prices. There are lots to meet the needs of all—the beginner who must begin right, the old breeder who will improve his stock, and the show man who wants to win in the strongest competition in the world. You will have the solid satisfaction of selection from the largest and richest New York prize winning stock and blood lines in America today—the selections are unbounded.

## The Imperial "Ringlets"

Are the proud product of more than a quarter of a century of Barred Rock breeding—they have the most fashionable barring and even blue color of the present day, they sell when no others will by reason of their matchless quality—no other strain holds so imperial a place in popular favor—their name leads all the rest. To meet success in winning prizes you must have my birds.

(See my ad on back cover page for the wonderful record of my "Ringlets" at last Winter's Madison Square Garden 1913 Show. This achievement takes rank in history as the most wonderful ever recorded since the New York show was founded.)

It will be to your interest to have this special sale list and take advantage of this opportunity to secure "Ringlets" at the cut down bargain prices. It is sound business judgment to buy what you want when offered for dollars less than it is worth, it is justice to yourself and economy. Whatever may be your wants in Barred Plymouth Rocks you will find it in my special sale list at bargain figures. The list will be mailed promptly upon request.

**EGGS** from the world's finest exhibition matings, \$10 per setting; four settings, \$35; 100 eggs, \$60. One-half these prices after June 10th. Elegant 70-page catalogue upon application. Address

making in the Stock-Keeper don't prove to their advantage, then we don't know what will. Good luck to them.

\* \* \*

Now is the time to buy breeders at reduced prices. Look up the ads.

\* \* \*

Dry bran is one of the best foods for growing chickens, besides it is a variety in food that tastes good. To mix it with a small proportion of meat meal and fine charcoal, makes it nearly a balanced ration.

\* \* \*

Mr. Gilbert has long been known as a breeder of Orpingtons and has held several places of trust in the poultry fancy. We look to him to make good and to give his city one of the best shows held.

\* \* \*

Murphy—"What's that in your pocket, Pat?"

Pat (in whisper)—"Dynamite. I'm waiting for Casey. Every time he meets me he slaps me on the chest and breaks me pipe. Next time he does it he'll blow his head off."

\* \* \*

Webster Farms, Girard, Pa., are offering a select lot of breeders in their White Rocks for sale. Last season at Cleveland, Philadelphia and Williamsport this line made a most wonderful record. We have very lately seen in the poultry journals pictures by Artist Stahmer of their first, second and third prize cocks at Cleveland. They are a trio par excellence. Such lines assure reliability.

\* \* \*

July is just the month to use "French's Poultry Mustard." So is every month, but be sure to get "French's." It is original and positively pure.

\* \* \*

Mr. M. F. Delano, the successor to "Owens Farms," has in his varieties of Orpingtons, White Rocks, White Wyandottes and Reds a great lot of quality breeders to sell. Birds in both old and young for the early shows. Mr. Delano would be pleased to hear from all those breeders who have wants in his line. Rest assured that Del will take the best of care of all that go to him.

\* \* \*

Mr. W. R. Graves of the Rockandottee Farm, Southboro, Mass., reports a large and choice lot of youngsters in both his White Rocks and Wyandottes. Just tell your friends you have "The Graves Line" and they will know your grade is of the best.

\* \* \*

Our duty is to be useful; not always according to our desires, but according to our powers.

\* \* \*

Poley's World Best Buff Rocks literally cover the country. Mr. Poley writes of having a good year and just lots of most promising youngsters.

\* \* \*

For the first time in years the members attending the A. P. A. convention will have a poultry show to attend at Atlantic City.

\* \* \*

President-elect Thompson advises all members to bring their bathing suits with them, as they are most liable to get short trousers there.

\* \* \*

Have tried to do my duty, so hope to be excused for ten days' fishing.

## BLACK LANGSHANS and INDIAN RUNNER DUCKS

Selected breeding cockerels a specialty. Satisfaction assured. Prices right. Mention A. P. J. when writing. **MRS. F. LITTLEFIELD, BOX A, MIDDLEBURG, MARYLAND**

## FLUFFY RUFFLES BARRED ROCKS

The world's champion strain continues to win wherever shown. I am in a position to furnish from this world's champion female line choice selections of stock or eggs to all those wishing the best.

**WELLESLEA FARM POULTRY YARDS, C. H. WELLES, PROP., STRATFORD, CONNECTICUT**

## PALMER'S WHITE ROCKS

FOR SALE—All of this season's breeders at \$3 and \$5 each. A good chance to get fine stock at reasonable rates. Write your wants; satisfaction guaranteed. "The Glen" Poultry Farm, Box A, Fairport, New York.

## FAIRVIEW WHITE ROCKS

**SWEEPSTAKES CHAMPIONS AT CHICAGO, INDIANAPOLIS, LOUISVILLE AND MEMPHIS, and WINNERS in the LOUISVILLE EVENING POST EGG LAYING CONTEST**

Eggs from these winners at half price the balance of the season. A grand lot of breeders for sale after June 1st. Write for prices.

**GUY DAILY Box A Jeffersonville, Indiana**

## A GOOD TRAP NEST

Made in a few minutes from a common box, very simple and reliable. Send 10c for complete printed and illustrated instructions for making your own trap nest. Warm water fountains, automatic feed hoppers, poultry houses, etc. Price list of our wonderful strain of Winter egg producing Barred Rocks free.

**Stirdivant Farms, Sheboygan Falls, Wisconsin**

## Old Honesty Hatchery

Will sell from now on to the end of season day-old chicks from 6½ cents on up. Good show and utility stock, strong hatched. Booklet free. Mention American Poultry Journal when writing.

**G. L. Kichline, Prop., Dept. A, New Washington, Ohio**

## Fell's Famous White Wyandottes

**At Madison Square Garden 1913**

Almost make a clean sweep winning: First Cock, Second Hen, First and Fifth Cockerel, First and Fourth Pullet, First Pen—four times as many First Prizes as all exhibitors combined, and all Specials. Have won more First Prizes at Madison Square my last three shows than all exhibitors combined. Thirteen Firsts at the great Allentown Fair, three showings. Special, best 10 birds in whole show twice in succession.

ALL EGGS AFTER MAY 10th HALF PRICE. Catalogue free.

**A. J. Fell, Box J, West Point, Pa.**

## White Rocks

During June and July I will sell eggs at half price, \$3.50 per 15, from my "De Luxe" mating, headed by a cockerel that won at the Illinois State Fair, Quincy Poultry Show and Illinois State Show, where he defeated the first Chicago cockerel sold by Owen Farms. The mother of this cockerel laid 210 eggs in one year and he is mated to my very best females. Eggs from my other special matings, \$2 per 15. After June first, I will sell at bargain prices all the birds that have been in my breeding pens the past season, including all my winners. Mating list free.

**CHAS. A. SIMMONDS**  
CAMP POINT -- ILLINOIS

## PURDUE EGG SHOW.

**T**HE Fifth Annual Purdue Egg Show was held at Purdue University, Lafayette, Indiana, May 14th, 15th and 16th, 1913. This show has now become an annual affair and is becoming well known and quite popular with the people of Indiana. This year entries were received from Wisconsin, Rhode Island and other states, thus showing

Prize-winning Eggs and Premiums won at Purdue Egg Show, held at Purdue University, Lafayette, Ind., May 14-16, 1913.

that people outside of Indiana were also interested in showing eggs in competition.

This Egg Show is managed and handled by the Freshmen students in the School of Agriculture who take Poultry Husbandry. The committee is elected by them and they manage the entire affair under the direction of the Poultry Division. This gives the boys much experience and increases the interest of the student body in the poultry work of the University. The prime object of the show is to increase the interest in the market egg. Indiana like all middle western states is very backward in improving the market conditions of the poultry business. Nearly all eggs are sold on the same basis whether good or bad, and in order to show people that there is a difference, and that good eggs are needed, this show is made public to the farmers of Indiana and nearby states.

The exhibits are divided into five classes:

1. **General Class.** In this class eggs are exhibited by breed and variety, and compete as such. Only those who are not students of Purdue can show eggs in this class. This year for the first time a dozen White Leghorn eggs exhibited by E. B. Murphy of Carmel, Indiana, won the sweep-stakes ribbons and cup. The judge, Mr. Stanley Wyck-off of the Indianapolis Poultry Company stated that they were the finest dozen eggs he ever saw, and gave them a score of 99.5. This is a compliment to the Leghorn breed.

2. **Commercial Eggs.** In order to really find a method of properly judging eggs, a commercial class was made where eggs competed largely upon quality, as found by testing. In the fancy class, weight and external conditions control the method of judging, but in the commercial egg class 50% is allowed for the freshness and quality

of the contents. In this class eggs compete under the heads of color and weights.

3. **Student Class: Freshmen.** In this section eggs compete by colors only and are judged the same as the entries in the Fanciers class.

4. **Students Not in Freshman Class.** This class is handled entirely on the same basis as Class No. 3.

5. **Freaks and Novelties.** Under this

section were found all kinds of eggs from frogs, snake, cray-fish and turtle eggs up to ostrich eggs and peculiar freaks. This section is merely made in order to make the exhibition interesting.

Another section was made up of an educational exhibit by the Poultry Division, showing the various grades of

various poultry associations of the state.

The exhibit was in the Assembly Hall of the Agricultural Building. It was well staged and well received by the hosts of visitors. Every one pronounced the exhibit a great success and the students felt well repaid for their efforts. The entries consisted of as follows: Fanciers, 61; Commercial, 14; Students (Freshmen), 73; Students (not Freshmen), 25; and Freaks, 36.

This year the show was about 35% larger than in 1912, and according to the increased interest, bids fair to enlarge each year. It is the only exclusive egg show held in the United States and far as is known is the largest one ever held at any one place. Every state has a different method of interesting its people in improving their market eggs, and Indiana is taking this method with the hope that little by little the people of the state will think as much of an egg in competition as they do of a good apple or an ear of corn. The apple and corn shows have been influential in improving the Horticultural and Seed Corn interests and it is hoped that the Egg Show will do as well for the market egg. Some of the winners of the most important prizes are as follows:

Grand Sweep-stakes Fanciers' Class: Ed Murphy, Carmel, Ind., on White Leghorn eggs.

Best Minorca Eggs: Ed Gardner, Indianapolis, Ind.

Best Langshan Eggs: Mrs. Chas. Byers, Lake Cicotte, Ind., on Black Langshan.

Best Commercial Eggs: C. L. Wright, Fountain City, on brown eggs.

Best Freshman Students Eggs: Brown: P. G. Riley.

Sweep-stakes and Best White Eggs—H. W. Marshall, Jr.

Best Dozen Eggs by Student Not Freshman: P. E. Tillett.

Exhibit at the Purdue Egg Show, Held at Purdue University, Lafayette, Ind., May 14-16, 1913.

eggs, egg testers and cartons for shipping.

Most of the prizes consisted of ribbons, but in the fanciers class there were four silver cups, and two settings of eggs offered as sweep-stakes prizes. In the commercial class the prizes were all cash, ranging from 25c to \$3.00. In the students' class there were four silver cups offered. These specials were given by prominent poultrymen and

American Poultry Journal.

Gentlemen: Your 1913 Poultry Year Book received, for which please accept our thanks. A hasty glance through its pages has convinced us that it is a valuable work and we are glad to have it in our library. We are giving you an editorial review on the book in our July issue of Poultry Success. Thanking you again and congratulating you on its appearance, we remain, Yours very truly, The A. D. Hosterman Co., Campbell L. Cory.

# Current News of the Poultry World

by J. F. Shureman

The next annual show of the Nebraska State Poultry Association is to be held in Grand Island, that city being the unanimous choice of the executive committee of the association at its meeting a couple of weeks ago.

A syndicate of Kansas City capitalists, headed by J. H. Burrey, has purchased 1,407 acres of land near Grant's Pass, Ore., and will engage in the poultry business on a large scale. One thousand acres is uncleared and it will be left in its wild state so that the chickens may roam about in search of natural foods. Large poultry houses are being erected and everything will be up to date.

Seven carloads of eggs were shipped from Morristown, Tenn., in a single week recently.

New York poultrymen will ask for an appropriation of \$10,000 from the State to be used in making an exhibit of New York poultry at the Panama-Pacific Exposition in California in 1915.

The Massachusetts Agricultural College announces a poultry institute to be held at the college on July 28, 29 and 30, the object of which is to give instruction in poultry culture to those who are interested in the subject but who are unable to go to college for a longer period.

Byron Hoe, of Marseilles, Ill., recently hatched a chick with four legs, four wings, two necks and one head, the head being attached to the ends of both necks. The chick only lived a short time.

Governor S. V. Stewart, of Montana, has appointed Amos C. Hall, of Virginia City; James G. Ramsey, of Miles City, and Sid Goodfriend, of Anaconda, members of the State Board of Poultry Husbandry.

A peculiar disease has broken out among the chicks in the vicinity of Statesboro, Ga., and many thousands of the little fellows have died. It is a strange malady and so far no cure has been found for it.

At a recent meeting of the Missouri State Poultry Board it was decided to

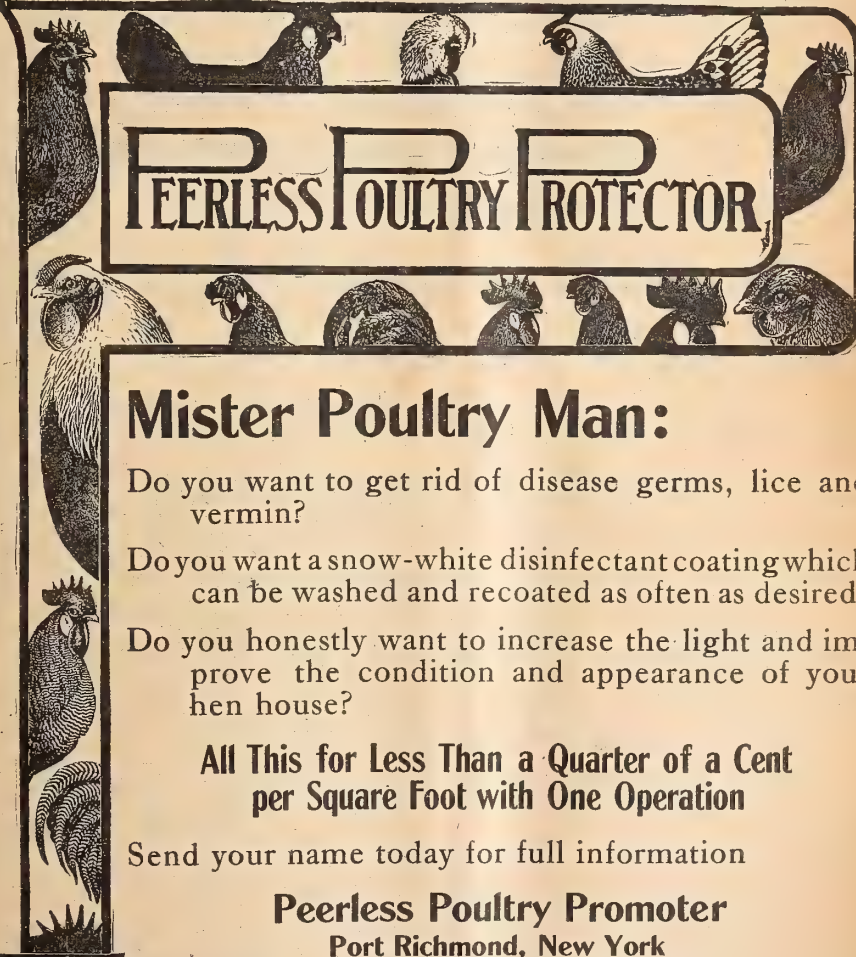

hold the next State poultry show at Chillicothe on December-11 to 18. Director T. E. Quisenberry, of the experiment station at Mountain Grove, was instructed to proceed with improvements at the station to cost \$15,000. The board engaged Ralph H. Searle, formerly of Nebraska, as assistant director of the State experiment station.

Andrew Gipp, of Marinette, Wis., has a freak chick that is sure a freak. It was hatched with rows of tiny teeth in

its bill, only one eye and only three toes on each foot. Next!

N. E. Chapman, head of the Poultry Extension Department of the Minnesota Agricultural School, who has been taking a poultry census of the State, claims that there is an increase of over 40 per cent over the figures of 1910 in that State.

The Chautauqua Stock and Poultry Food Company, of Fredonia, N. Y., has filed a voluntary petition in bankruptcy

## Lichtenwalter's Quality Buff Ply. Rocks

Winners last season at Madison Square Garden, New York, Springfield, Illinois, (club show) Philadelphia, Cleveland, Williamsport, etc. I am closing out half of my breeders. Mated birds a specialty. Write me your wants. Mention American Poultry Journal when writing.

E. A. Lichtenwalter : Box A : Girard, Pennsylvania

with liabilities of \$4,117.88 and assets of \$145.97.

More than \$300,000,000 was spent for chicken feed in the United States during the year 1912, according to a report read at the semi-annual meeting of the American Feed Association in Chicago on May 25. W. R. Anderson, of Milwaukee, Wis., author of this statement, reported also that the capital invested in the feed business amounts to more than three times that invested in the steel industry.

H. H. Benjamin, the well-known poultry breeder and judge, died at his home in Hutchinson, Minn., recently. His age was 50 years.

The following officers of the South Dakota branch of the American Poultry Association were elected in May: President, Charles McCaffree, of Howard; first vice president, William Scallin, of Mitchell; second vice president, W. A. Wheeler, of Mitchell; secretary-treasurer, W. C. McConnell, of Sioux Falls.

Every county in New Jersey now has a poultry association and in several counties there are two associations.

Clarinda, Iowa, is the Petaluma of the Central West. During the past year more than \$1,000,000 have been paid out by the three poultry and egg-buying and shipping establishments of Clarinda for poultry and eggs. During the egg season the shipments average over 500,000 eggs per week, or four carloads.

Joseph Haywood and Arthur Hansen, two well-known members of the Joseph Sheehan Grand Opera Company, have gone into the poultry business as a "side line" and have an up-to-date poultry farm near Willoughby, Ohio, where they spend their time when not engaged in their operatic work. They declare they like the work and are destined to make a success of their venture.

To own the finest chicken ranch in the Southwest and to teach the farmers of Neuces county, Texas, to sell enough poultry and eggs to provide for all their upkeep, is the ambition of F. Z. Bishop, founder of the Texas town that bears his name. Mr. Bishop has established an extensive poultry ranch, with all the latest equipment, and has engaged a former Connecticut poultry expert to manage the business. The present hatching capacity of the plant is 1,200 chicks every three weeks, but Mr. Bishop plans to increase the output to 3,000 a week. He will keep only pure bred stock of the standard varieties. When the chicks are ten days old they will be "farmed out" among the farmers in the vicinity of Bishop on shares. In this way Mr. Bishop hopes to get the farmers interested in pure bred poultry.

Fifty poultrymen of the vicinity of Tulare, Cal., have organized a co-operative poultry association for the purpose of disposing of their poultry produce direct to the consumer, saving the middlemen's profits.

## Notes from a Diary of a Chick

(Continued from last month)

I overheard Mr. Noftzger telling a customer, while selecting some stock for him, that there was a rich mahogany "happy medium" color which he had always preferred and mated in his pens. He said further that some so-called judges and poultry authorities were to blame for the wide variance of

color and that it was quite discouraging indeed to furnish a very high-class show string only to have them defeated in the show room by cheap fowls that were not of the correct color simply because the judge was incompetent.

One morning I flew up on one of the brooder coops to better admire the many youngsters playing in their runs and get the benefit of the sunshine and

while there gained a little knowledge. Several visitors were going through the yards and as usual seemed greatly to admire the new generation. One of them asked my owner how he accounted for the hardness and unusual activity of the chicks and since then I have thought his reply over and over many times. It was:

"Fresh air furnishes more stamina and vigor than anything else in the world. My fowls are given all the fresh air possible from the day they are hatched until they leave Oaklyn Place and then they go in open crated coops."

I suppose that all fowls were allowed plenty of fresh air, but probably fresh air, sunshine and fresh water are so cheap that many poultrymen do not appreciate their real worth. If fowls could talk their owners would soon be made to realize. So many people who come here express surprise that we live all winter almost "in the open."

Another little thing caused us all to smile. A visitor said he had heard a year or two ago that it was possible by the color to tell the sex of Partridge Rock youngsters and that last year when ordering baby chicks he had requested my owner to send none with stripes, as he wanted to raise all pullets and to purchase males later to mate them. He said the little fellows came with the color as requested, but to his surprise there proved to be as many cockerels as pullets.

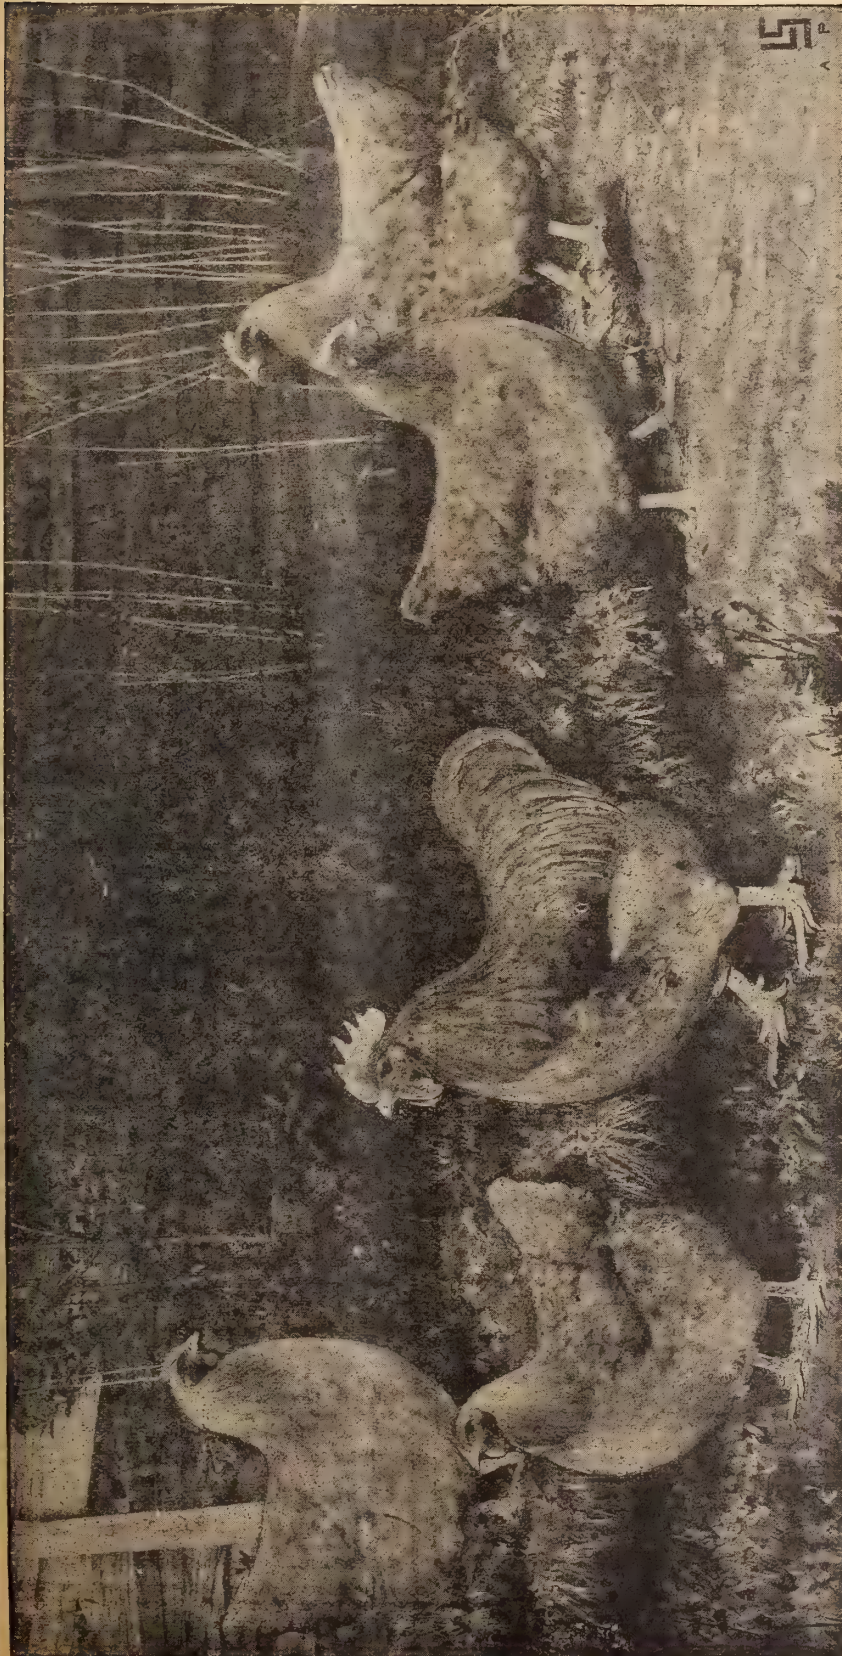

We have known for years that there was nothing in this color proposition, for early in my life I had heard my owner say that he had tested this with other Partridge varieties as well as Partridge Rocks and found that it was not reliable.

A laughable incident happened just at the beginning of this breeding season. The different pens were being admired by an interested group when one of them said, "We have seen many matings of high quality males to equally as good females, but where are your double matings—your cockerel matings and your pullet matings? I have seen no males with red in breast and very few with any red in fluff."

The answer to this was: "When you have seen the remainder of this row of matings you will have seen all and there is not one of the forty but that will produce fine ones of both sexes. Double mating in Partridge Rocks is not only unnecessary but is a hobby of those who do not know whereof they speak and is the short road to ruin of the breed. Why! many of the noted winners and best specimens of the breed come from a long line of show ancestors—both male and female."

There are some other things of interest that might be told this time, but already my mates are going to roost and are probably wondering about me. Next time I will begin a little earlier and in the meanwhile will "listen and learn."

First Prize Pen Buff Orpingtons, Chicago, Ill., 1911, Owned by A. E. Martz, Arcadia, Ind.

### JOE-PYE ORPINGTON FARM

HARRY STACEY BENTON, Owner  
R. F. D. 5, SO. NORWALK, CONN.

### NOTICE TO SECRETARIES.

This the largest Orpington club in America, boosting the Best Orpington Fowl, the Black, will offer a set of 5 handsome medal silk ribbons at every show in the world. If you wish to have them, also our medals and silver cups, you should write the secretary-treasurer at once. There are several state meetings to be placed yet. Do you wish them? The American Black Orpington Club has decided to offer at the Panama-Pacific World's Exposition Poultry Show at San Francisco, 1915, the finest cup ever placed on poultry, to be known as the World's Cup; value \$100.00. Several \$25.00 cups will also be placed, besides the many cash prizes and specials. If you, fellow, Black Orpington breeder do not belong to this club send \$1.00, the fee for a year's membership, to the secretary at once. The club is also preparing several sets of lantern slides for the American Poultry Association Lecture Bureau. Thus you see the immense amount of advertising that is being done to benefit the Best Orpington, the Black. Address The American Black Orpington Club, Ora Overholser, Secretary-Treasurer, Eaton, Ohio.

### ANCONA CLUB OF AMERICA NEWS NOTES.

Our annual election of officers for the coming year will be J. O. Somers, Bedford, O.; president, C. H. Young, Los Angeles, Calif.; vice president, Geo. Johnston, Jerry City, O.; secretary-treasurer, J. W. Minniker, West Toledo, O.; auditor, Henry Scheyer, Silver Creek, N. Y.; election commissioner, F. C. Stier, Cleveland, O.; P. W. Logan, Woodbridge, N. J., and W. H. Branthoover, Pittsburg, Pa., National Board members.

Our year book is now ready for mailing and contains a large membership of the most noted breeders in America and abroad.

Will have some great articles by America's leading breeders, and will show many fine illustrations of the leading prize winners at the greatest shows. This is the oldest Ancona club in America, and the world's leading pioneer breeders belong to this club, and at present it is in the hands of the real live wires, and in the last six months practically every member has mailed out thousands of circulars, etc., for the purpose of boosting this great breed.

When it comes to boosting these birds in the show room, our club certainly has done wonders for the breed, having cooped 436 Anconas at the last two regular meets, and this coming winter, will show at least 300 birds wherever the place is decided to hold same, of which we will advise you through these columns.

At present we are very busy compiling our standard as adopted at our big meet in Cleveland last January for the revision committee of the A. P. A., and with having the oldest breeders in America in our club, can easily show to the revision committee, what changes are really necessary for the next new standard.

All persons who have started with Anconas this season, and do not belong to this club, should mail \$1 to Geo. Johnston, secretary, Jerry City, O., for the new year book and other literature which will be of great value to any one interested in these birds.

### ROCHESTER, N. Y., SUMMER SHOW.

During the week of September 15, 1913, in connection with the Rochester Industrial Exposition, there will be a poultry show held along the same general lines as those held in connection with the state fairs, etc. Competent judges will award hundreds of dollars worth of prizes. The American Standard of Perfection will be the guide for the judges in awarding these prizes. A premium list is under way, and exhibitors before making up schedules will do well to consider Rochester. Edgar F. Edwards, 116 Powers Bldg., Rochester, N. Y., is the secretary to whom all applications and requests for information should be addressed.

The Dyersville Poultry and Pet Stock Association will hold its annual exhibition at Dyersville, Iowa, December 2 to 6, 1913. U. J. Shanklin, judge. Frank Faha, Jr., secretary.

### ANOTHER BIG FALL FAIR TO HAVE AN UP-TO-DATE POULTRY DEPARTMENT.

Fall fair poultry shows nowadays have the call and that fair associations are appreciating this is shown by the fact that Lancaster County Fair has just decided to make poultry a big feature at their fair hereafter.

Lancaster county, Pa., is the richest agricultural county in America and its fair association has lately elected Mr. W. Theo. Wittman, well known for his work with the Great Allentown Fair Poultry Show as manager of the poultry department. This means that the Lancaster Fair Poultry Show will hereafter be on the map and add one more to the list of great fall fair poultry shows.

For this first year the entry fee will be only 50 cents with liberal premiums and with good management and good care of the exhibits absolutely guaranteed. Two express companies also guarantee good shipping service. The poultry building is now being entirely rebuilt and will be a magnificent poultry show hall by the day the fair opens.

For those who in past years would have liked to show at Allentown but have felt that the dollar entry fee there was too high, the Lancaster Fair offers a splendid chance to exhibit. Again Lancaster will be the week after Allentown and it will be an easy and short haul to ship from one to the other and many will want to make both shows.

Premium list will be ready some time in July and can be had by addressing the secretary, J. F. Seldomridge, Lancaster, Pa.

### LOUISIANA STATE FAIR.

The Eighth Annual Poultry Show of the Louisiana State Fair will be held at Shreveport, La., November 5-12, inclusive, 1913. One thousand dollars in cash premiums are offered on poultry. This show was selected as the official show for the Louisiana branch of the A. P. A.

The poultry building is 80x160 feet and several hundred new Empire coops will be added this year.

Mr. O. L. McCord, of Danville, Illinois has been selected as judge. Mr. S. M. Watson, of Shreveport, La., is superintendent. For catalog and premium list write to Louis N. Brueggerhoff, secretary, Box 1100, Shreveport, Louisiana. All these officials are members of the A. P. A.

## WHY NOT SPEAK OUT IN MEETING?

**We Need Coöperation Among Poultry Keepers—If You Have a Good Idea Tell Your Neighbor About It.**

By H. E. Nosyt.

VERY FEW OF US have as yet learned the value of coöperation. We are, each of us, working in our own poor little miserable way to produce something that another in some corner of the earth is struggling to get; which is all right in a way, but the proof is everywhere evident that neither the producer or the consumer is getting good value for his time and money.

The chief cause is the lack of coöperation among all classes of people. Everything of any importance that has been brought about since the world began has been the result of the coöperation of the people who dwell therein. One man or one woman is so helpless as to be all but pitiful without some assistance from other men and women about them. And so it is when we come down to our own ideas and thoughts on the subjects in which we are interested. What do they amount to if we do not enjoy the right of studying and delving into the thoughts of others who are interested along similar lines? Here and there we gather a hint of something above the ordinary. Now and then we pick up a thought that when worked on, grows into a really big and useful idea.

It has seemed to me for many years that here is where poultry keepers need greatly to coöperate. I have been reading poultry papers for at least two decades and practically the same things have been printed over and over in the majority of them during all that time. Verily, it is very rare that we get a new idea. I can count on the fingers of my two hands the new things of importance that have been brought forth during that time. Which goes to prove that the average poultry writer has not exercised his inherent right to think; the threadbare thoughts of others have satisfied him for many years, and in many cases are still doing duty.

Everywhere we meet the poultry keeper who knows all there is to learn of a business which has made and lost millions. His ideas are sane and practical; your way and mine make him tired. But, the gods be praised, we are not all cast in the same mold.

I have been reading all of Mr. Stoddard's new gospel of poultry keeping and putting all of it that I can to the test and it "grows on me" that he knows whereof he speaks. I regret that the cage roost is not available all the year round in northern climates, since it would so greatly lessen the cost of keep.

In regard to his suggestion for using orange crates for nests, I have tried it with great success, but find that the openings must be secluded and consequently I fasten the boxes to a bracket platform, at a convenient height for gathering the eggs, with the opening toward the wall of the house, leaving sufficient room between for a hen to use the board walk and select her quiet corner. I have experienced much trouble in large flocks with that "pestiferous"

profit-destroyer, the egg eating hen. She not alone thins down the profits of an egg farm but increases the work, and plays havoc with the poultryman's disposition. I have to date found but two Cures for Egg Eating.

One is to eat the hen, and the other is effected in the following manner:

Whenever or wherever a hen is found picking at the shell of an egg, or eating the contents after she has gotten at the "meat in the cocoanut," remove her from the flock and cut her bill down at the point, until it bleeds slightly. This, of course, exposes the nerves near the end of the bill. The bird is then placed in a coop with a grass run and given

nothing to eat, but eggs in the shell. Naturally every time she picks at the shell of one of these it hurts so that she soon stops and after a day or two of this treatment I have never known a hen to again develop this bad habit. The eggs supplied such a hen will be found with blood "pecks" on the shells, showing that she tried to break the shell, but the process was too painful.

There are probably several causes for this bad habit developing among laying hens, but none which foster it more than that of nests exposed to the light, and too many birds having to use the same nest. In a flock of one hundred birds at least twenty nests should be pro-

## URBAN FARM CHAMPIONS

We will spare a limited number of settings from our prize winning Black Langshans, White Rocks, S. C. Mottled Anconas, Silver and Golden Campines, Black Tailed Japanese Bantams at Boston Show, 1913. Three varieties shown, our entries won eight firsts, four seconds, two thirds, one fourth, two fifths. Of 34 birds shown, 29 were under the ribbons. Mating list for 1913 on application. Correspondents please write their name and address plainly.

URBAN FARMS,

PINE RIDGE,

BUFFALO, N. Y.

## S. C. WHITE LEGHORNS

Our birds have won in almost every important show in this country and Canada for our customers. They have won 35 firsts, 22 seconds, 28 thirds, 18 fourths, 16 fifths and almost 100 cups, specials, etc., in the last three years at Grand Central Palace, New York, Boston and Philadelphia for us. They can win for you. Our record for 1912 has never been approached by any White Leghorn breeder at the big shows. We can supply hatching eggs at 60 cents each from our very best pens. (The same ones we hatch our own winners from). 35c and 20c each, or \$15 per 100 from other good matings. Buy from the breeder that produces the goods. Actions speak louder than words. Now booking orders for the early Fall shows. Some choice breeding stock for sale. Write for prices and mention American Poultry Journal.

Dune Alpin Poultry Farm, Geo. J. Kerr, Mgr., Box 561-J, East Hampton, N. Y.

**U. R. Fishel's Ad in this issue will interest you. Read it.**

vided. Less than that will result in eggs being broken in the nests by crowding. Last season a flock of ninety hens yarded in a grove of trees were provided with fourteen nests, placed about in secluded places. They used these liberally, but supplied themselves with fifteen other "nature spots," showing that they do not wish to be crowded on the nest.

Where broody hens are not to be used for incubating eggs, they should be broken up as soon as they show a disposition to sit, but in the spring of the year poultrymen, especially egg farmers, will find it greatly to their advantage to use them for hatching and brooding chicks. The best plan is to give them the comforts they require and let them alone with as many eggs as they can cover. A "pestered" broody hen is invariably a "pesky" broody hen, while a good one undisturbed is apparently as calm and unmoved as the Sphinx. For breaking up broodies, I

## PAGEL'S

PERFECTION SANITARY CHICK FOUNTAIN AND FEEDER

The most perfect chick fountain made. Does not spill the water when inverted. Supplies the water, feed or grit automatically. Inquire at your dealer, or sent direct postpaid for 25 cents. Write for free descriptive circulars. PAGEL POULTRY SUPPLY CO. Lock Box 211, Rockford, Illinois. Mrs. of the Page's Non-Freezing Fountains and Page's Non-Clog Economy Dry Feed Hoppers.

use what is known as "the dip," which is a slatted coop about four feet square and hung suspended from the limb of a tree by means of a heavy rope. The rope should be knotted at one end and then passed through a hole in the center of the top of the coop, which must be made of sufficiently heavy lumber to hold well and then tied to the limb of the tree, allowing it to swing at a convenient height for putting in broodies, and taking out birds soon to begin laying again.

Not all poultrymen have gotten on to the best methods of collecting eggs. I prefer a basket large enough to hold about two hundred eggs and no more. I have frequently seen pictures of men carrying baskets of eggs of sufficient size to hold from four to six hundred eggs, but either the baskets must have been like we sometimes find strawberry boxes of no particular depth, or they were partly filled with excelsior, or the men were holding them just long enough to "see the birdie" and no longer. Four hundred eggs is about all I care to carry at one time and I do not want these all in one basket. It also simplifies matters greatly to pack the eggs each day as they are brought in, and it pays to select and grade them, rejecting all dirty or soiled eggs for the best trade. The matter of dirty eggs is mostly solved when the egg eating habit is broken, that is, if the nesting material is kept fresh and clean and the birds are not allowed access to swamps and filthy places.

We who are pursuing the elusive dollar by means of the production of high class "day-laid" eggs must see to it that the bloom of the new laid egg is not tarnished, and that it reaches the consumer in all its purity.

We hear much about the combination of poultry and fruit being an excellent one, and when we consider some facts given out by Mrs. Margaret M. Nice, Cambridge, Mass., there is every reason to believe the statement. Mrs. Nice has made an exhaustive study of bird life and she finds it to be an actual fact that a laying hen eats thousands of bugs and worms every day when given the opportunity to do so. Among other things she states that a laying

hen which she had under surveillance consumed more than a thousand house flies daily, and at another time five thousand aphids, together with twelve hundred rose slugs. A six weeks old chick consumed thirty-seven grasshoppers and two thousand four hundred seeds of pigeon grass, besides sixty-five large black crickets. Mrs. Nice in making these experiments has done so wholly by the living feeding test method, by giving different foods to the birds and counting and weighing the amounts, as the case might be. It looks as though the man who keeps a few thousand laying hens and raises chicks by thousands is not alone a public benefactor by increasing the food supply but also by decreasing the number of bugs and worms that are gnawing at the vitals of all plant life. Truly the hen has a mission to perform as she goes scratching about the roots of the trees in the orchard. For this reason as well as for many others we need her in our business.

## PRIZE MONEY FOR PARTRIDGE WYANDOTTE BREEDERS.

To create a healthy rivalry and increase the interest of the breeders of "Premier" Partridge Wyandottes, Sheffield Farm, Glendale, Ohio, will offer the following liberal cash prizes at the Ohio State Fair, the Illinois State Fair and the New York State Fair during the fall of 1913.

First Pen, \$25.00.

First Cock, \$25.00

First Hen, \$25.00

First Cockerel, \$25.00

First Pullet, \$25.00

These prizes are open to all customers of Sheffield Farm who enter their birds as "Premier" strain Partridge Wyandottes and Sheffield Farm will not be a competitor. The secretaries of the above mentioned fairs have been notified of this offer, which is of course in addition to the regular premiums. The Partridge Wyandotte breeders have been enthusiastic exhibitors at the poultry shows during the past few years and this offer will probably bring out a good lot of birds at the fairs named.

## 43 Varieties

**U. R. FISHEL'S AD in this issue will interest you. Read it.**

## ANNOUNCEMENT.

The Chicago House Wrecking Company, who have been constant advertisers in our columns for the past seven years, and who have become known as the great price wreckers, recently incorporated under the name of Harris Brothers Company with a capital stock of \$10,000,000.

In 1893 the Chicago House Wrecking Company was incorporated, and since that time its executive officers have been the four Harris brothers. This company in 1894 bought the complete World's Columbian Exposition of Chicago and in the succeeding years the Trans-Mississippi Exposition of Omaha, the Pan-American Exposition of Buffalo, and the Louisiana Purchase Exposition of St. Louis.

During the past 20 years this company has gained national fame and repute as being the largest institution in the world devoted to the sale of lumber and building material supplies direct to the consumer. The public have benefited greatly by the operations of the Chicago House Wrecking Company.

During the early part of the career of this company they confined their business mainly to the building lines, but as years passed other lines of merchandise were added to their business, gradually

including practically every known manufactured article, such as plumbing, heating, hardware, machinery, paint, harness, sporting goods, groceries, furniture, floor covering, roofing, fencing, clothing, etc.

As time passed, they felt that their name, The Chicago House Wrecking Company, was a drawback and a misnomer. They have spent millions in advertising that name to the public and in acquainting it with the nature of their business and the opportunities afforded to save money in the purchase of supplies. And yet as their business became more and more famous and their volume of sales increased farther and farther into the millions and as the number of their customers and patrons began to range into the hundreds of thousands, they recognized that they were incumbered with a name that failed to do justice to the business in which they were engaged and so, after much consideration, they have determined to take a step forward and to use as the title of their company the names of the men who have built up this great commercial enterprise; that is why they changed their name to the Harris Brothers Company.

There is no doubt but that the new name will put that touch of personality

into this institution to which it is justly entitled.

The four Harris brothers are men in favor of the idea of conducting a commercial institution second to none, of selling goods to the public of a known given quality, selling them at a price that means a material saving and of giving personal service in connection therewith that can not help but win public favor.

It is not their intention to discard the name, Chicago House Wrecking Company. It has been the means of building up this business and of bringing them that acquaintanceship which must be a source of gratification to any business house. They shall retain as their slogan the "Great Price Wreckers," to which they are justly entitled, because they have wrecked prices continuously and shall go on and on plying this vocation.

As a matter of fact it is hardly necessary to give public announcement of the change of their name from Chicago House Wrecking Company to Harris Brothers Company, as practically every one knows that the Harris brothers own the Chicago House Wrecking Company, and in the future we ask our subscribers to address them as Harris Brothers, 35th and Iron Sts., Chicago, Ill.

C. L. Cunningham, of the firm of Cunningham & Son, Caruthersville, Mo., informs us that owing to ill health he has decided to sell all of his birds, especially the show birds, and will make very attractive prices to those who can purchase them at once. He has about 50 very choice show birds, also about 50 cocks and many fine early hatched birds to offer at bargain prices. This firm makes a specialty of Single Comb White Orpingtons and during the past two years have won many prizes at the leading shows in the Southwest. Write at once for particulars and mention American Poultry Journal.

## SELECTING INCUBATOR EQUIPMENT.

Now Is the Time to Plan for Next Season—And When You Do Plan, Be Sure and Have All the Information—Here's a Way to Select Your Incubator with Safety.

Now that the grand rush of the hatching season is over, and work on the plant has assumed the easy routine of summer, poultrymen are beginning to take stock of their operations. They are casting up balances of the past six months' income and outgo, and making plans for next winter. For the man who makes a real success with poultry must be always on the outlook. He must note changes in prices and market conditions; improvements in methods and any deterioration of his equipment. He should plan for the next year with his eye on the experiences of the past season.

One of the first and most important things he should take into consideration—this progressive poultryman who is seeking to expand his business and increase his profits—is his incubator. His entire operation depends on his hatching equipment, and no part of his plant will repay so well a careful and thorough investigation. This investigation should be made with the records of the past season's hatches at hand, and any faults that appeared should be rigidly traced back to their causes.

Not only should defects be scrutinized, but the general cost of hatching. In this day of careful management and cutting down of costs at every stage, there is only one system of incubating that can be run at a minimum of expense. This is the mammoth incubator system, and the man who, with such superb equipment available as the famous Hall Mammoth Incubator, continues to use the old-style oil-heated machines is either conducting his plant on a losing basis as far as unnecessary expenditure is concerned, or has too small a number of birds to be considered in a commercial sense.

The Hall Mammoth Incubator is the ideal hatching equipment. It is built on principles that are safe and absolutely reliable. Its fuel cost is much lower than that of oil machines of equal capacity, and its large hatches of strong, healthy chicks cause it to be the most profitable incubator on the market.

Now is the time for the poultryman to plan for his increased capacity next year, or to replace his present system, if it has not been all that he desires, with a better and more efficient one. But the consideration of the new installation

Bargains in Chicks  
for July, August and September

There is big money in raising chicks for the fall and winter market. We make a specialty of summer broiler chicks, hatched from large breeds only. We guarantee safe delivery of live, strong chicks to your Express Office. We have also cut the prices of all our pure bred fancy stock. Our prices on chicks are lower than most breeders ask for eggs of the same quality. If you have never tried our "better hatched" chicks you have never know what strong chicks are, the kind that live, mature rapidly and grow into money. Order direct from this

list. A shipment each week. No delay. We are the only large plant doing business all summer. S. C. White and Brown Leghorns, 25 for \$2; 50 for \$4; 100 for \$8; 500 for \$40. Barred Rocks, White Rocks, S. C. Black Minorcas, S. C. and R. C. R. I. Reds., 25 for \$2.50; 50 for \$5; 100 for \$10; 500 for \$50. White Orpingtons, White Wyandottes, 25 for \$3; 50 for \$6; 100 for \$12; 500 for \$60. Assorted, left after regular orders are filled, no choice, 25 for \$2; \$50 for \$4; 100 for \$8; 500 for \$40. Mixed broiler chicks from large breeds only, 100 for \$8; 500 for \$37.50. Send money order for full amount with order to

The Co-Operative Breeding & Hatching Co. - Box A - Tiro, Ohio

should not be delayed. NOW is the time to begin planning, for many reasons. The incubator concerns will be rushed during the late summer months and the early fall, and shipment will be delayed if the order for equipment is put off until that time. And the purchasing of incubating machinery should not be made hurriedly, but every phase of the situation gone into thoroughly.

Every poultryman who is planning any changes whatever in his hatching equipment for next season should certainly secure a copy of the Hall Mammoth Incubator Company's Catalogue of Incubators and Brooding Systems. The book is called a catalogue, but it is very much more than this. It is, in fact, a thorough and most authoritative text book on hatching and raising chicks. It is written by men who have made a study of these problems for years and who are thoroughly conversant with every phase of the poultry business. These authorities discuss the problems of heating, regulation of temperature, means and methods of ventilating and other important questions in a manner that is at once interesting and most valuable. No

poultryman, whether he intends to purchase Hall Mammoth Incubating equipment or not, should be without a copy of this book. It will give an insight into the principles underlying the poultry business that means better methods and larger profits.

Write the Hall people for a copy of their catalogue today. A postal will bring it to you—a handsome, 64-page book, filled with valuable information and well illustrated with diagrams and photographs. Address the Hall Mammoth Incubator Company, Little Falls, New York.

### WHITE DIARRHOEA PREVENTED AND CURED.

The first thing necessary for the prevention of white diarrhoea in little chicks is perfect health in the hen. This insures high vitality in the egg and this in turn a perfectly healthy condition in the chick at the hatch. It is safe to say that nine-tenths of the chicks which die of white diarrhoea are hatched with the disease in their system. To eradicate this condition, we must begin on the hen which lays the egg.

Elsewhere in this issue the Nabob Remedy Co., Box 1, Gambier, Ohio, tell of their wonderful discovery, PRESCRIPTION NO. 4.

They claim that this prescription, if fed as directed, will keep the fowls in such perfect health that the egg will have such a high vitality that your chicks will naturally be free from the dread scourge of white diarrhoea at hatching time. This is nine-tenths of the battle.

The following is a copy of one of scores of letters coming into their office daily:

"Reesville, Ohio, March 22, 1913.

"The Nabob Remedy Co.,

"Gambier, Ohio.

"Gentlemen:—Inclosed find 25c for a box of remedy No. 5. I am using your No. 4 and find it all you claim for it.

"Yours truly,

"W. A. LINKHART."

About one-tenth of the white diarrhoea is caused after the chick is hatched by overheating, chilling, bad feeding, and uncleanliness.

The Nabob Remedy Co. have discovered a remedy which will prevent the disease arising from any of these causes, if it similar in their symptoms and both such is given as directed from the first feed. White diarrhoea and cholera are very cumb to the same treatment and both are prevented by the same means.

Prescription No. 5 is the remedy which has been recommended by the Colorado Agriculture College as the one best remedy for cholera, and it has been found to be a true preventive of white diarrhoea.

The prescription may be had for 25c with the guarantee that your money will be refunded if you are not satisfied after using it all.

When once the dreaded scourge has broken out, nothing has been found so successful in combating it as Prescription No. 3.

This prescription No. 3 has been on the market for three years and thousands of boxes have been sold under a money back guarantee, yet the company claims that they have never been called upon to refund a single penny. They are so confident that if you once use Prescription No. 3 that you will not be without it thereafter that they will send you a big box for 25c and refund your money after you have used it if you are not satisfied.

Five pounds of Prescription No. 4 costs \$1, but to introduce their remedies to every poultry raiser, the company agrees to send 5 pounds of Prescription No. 4 and a big box each of No. 3 and No. 5 all for \$1 and refund your money after using them, if you are not satisfied. Every poultry raiser should take advantage of this wonderful offer.

The company will send their circulars free for the asking.

Reliable Poultry Journal Pub. Co.,  
Box E-13, Quincy, Ill.

The E. C. Young Box Co. of Randolph, Mass., wishes to announce to their many friends and customers that they have secured from the management of the Second International Poultry Exposition, 450 feet of floor space at Young's Million

Dollar Pier, Atlantic City, N. J., where they will have an exhibit from July 4th to September 1st of their entire line of Poultry Houses, Coops, Oat Sprouters, Trap Nests, etc. Call and see them, but first write for their booklet. IT'S FREE.

A striking actual test for a roofing is that offered by Bird & Son, East Walpole, Mass., Makers of NEPONSET Roofings, NEPONSET Waterproof Building Papers, NEPONSET Wall Board, etc. It is as follows:

The Chicago & Northwestern Railroad, one of the wealthiest roads in the country, covered the old Wells Street Chicago terminal with NEPONSET Paroid Roofing in 1903. When the terminal was torn down in 1911, 8 years later, the roofing was in such excellent condition that the railroad officials decided to save it and it was rolled up and used on the roofs of other stations of the system. This roofing is giving just as much service today as it was the day it was first laid, 10 years ago.

This is certainly a remarkable test. NEPONSET Paroid Roofing has also been used very extensively by the United States Government. In Panama alone it has used over 1,400,000 square feet and in Panama, Cuba and the Philippines it has used over 3,000,000 square feet.

NEPONSET Paroid was one of the first ready roofings on the market.

NEPONSET Proslate is a recent development of Paroid, intended for residences, club houses and other buildings which require an artistic roofing. It is just as long lived as NEPONSET Paroid, but has the additional feature of being colored. It is furnished in attractive shades of red and green.

### THE PRESERVATIVE VALUE OF NATURAL ASPHALT.

It is a surprising fact to many that not only did natural asphalt exist thousands of years ago, but that its remarkable preservative qualities were known to the ancients from almost remotest periods of antiquity.

It is said that natural asphalt was used in the construction of the Tower of Babel, and it is known that natural asphalt entered into the building of the walls of Babylon.

Moreover, the Egyptians were another people who utilized asphalt in practically its natural state for preserving various articles, prominent among them being the bodies of their dead. That its efficacy is positive and genuine is proved by the bringing to light of the mummies of Egypt in these modern times perfectly preserved, together with the trinkets buried with them, after the lapse of many centuries.

Even though the knowledge of this wonderful product of Nature was lost during the Middle Ages, the rediscovery of natural asphalt in modern times finds it just as valuable as in days of old.

Indeed, it has far greater value to the civilization of the present day because

the enlightenment of modern peoples enables them to apply scientific knowledge to its production and preparation, and thus give increased usefulness to such a product.

Its value is increasing daily in these practical times because of its recognized utility in many ways and places.

But where does this material come from? you may ask.

There are many deposits in different parts of the world, but by far the largest supply of natural asphalt of uniform quality is obtained from the asphalt lake on the island of Trinidad and Bermudez Lake in Venezuela, South America.

Charles Kingsley made Trinidad Lake famous in his nursery literature, and its notoriety has increased greatly of recent years, because of the fine quality of product it yields, and its adaptability to so many practical uses of modern civilization. Bermudez Lake also furnishes the same superior quality of asphalt, high in commercial value.

First, we have the asphalted city streets—the material which has revolutionized street-paving methods and done wonders toward reducing the nerve-racking noises incident to city life.

And the use of natural asphalt has also extended to country roads, which transforms the former rutty, sandy,

dusty, muddy trails into wonderful highways of travel, adding greatly to the joys of the motorist, as well as to those who are thus relieved of "taking his dust."

For roofs of buildings of all classes, from the smallest rural dwelling to the largest skyscraper of the metropolis, natural asphalt has demonstrated by its lasting waterproofing qualities its superiority over every other kind of roofing, not even excepting tin and slate.

Its use does not stop here, for as a waterproofing agent in foundation walls, floors, tunnels, or any masonry below or above ground natural asphalt plays a vitally efficient part.

Even in the form of a paint natural asphalt is the most satisfactory preserver of iron fences, steel girders, and metal work of any character from rust and all decaying influences.

New uses are constantly being found for this invaluable product of Nature.

This has recently been demonstrated on the farm by the use of natural asphalt for treating posts and other wood used in or exposed to dampness. Natural asphalt prolongs the life of timber indefinitely when properly treated.

Thus the field for this centuries-old product of Nature is ever broadening and is receiving new impetus in our own

## ORPINGTON FOWLS AND DUCKS

Winner at Grand Central Palace

Winners at Madison Square and Grand Central Palace, N. Y. My birds are all descendants from prize winners, and my recent "victories" at these two most prominent shows in America should convince you that I have "quality" that will please you. A few special bargains in trios and pens at this time.

ON 11 BIRDS SHOWN AT THE PALACE 10 WERE IN THE MONEY

ON 14 BIRDS SHOWN AT THE GARDEN 7 WERE IN THE MONEY

These prize winners are all in my yards and are mated for the egg trade. Plenty of grand pens to select from. Superb matings, \$5.00 to \$15.00 per 15. Excellent quality for the price.

### Buff Orpington Ducks

Madison Square winners. I won 1st pen, 2d young drake, 2d young duck and 3d. pen Grand Central Palace. I have as fine a flock of these most wonderful layers and money makers as can be found anywhere. Having a flowing stream insures my duck eggs being fertile. Duck eggs only \$3 to \$5 per 11. Write for prices on Baby Chicks, Catalog and mating list free.

### A BIG PARTRIDGE ROCK SALE.

It is not often one of the world's greatest breeders of any variety of fowls offers every one of his matured breeding and show birds for sale. However, that is just what Mr. S. A. Nofztger, Box 38, North Manchester, Ind., the originator of the Partridge Plymouth Rock fowl, is doing this summer.

In a letter just received from Mr. Nofztger he states that on account of having about twenty-five hundred youngsters, he has decided to dispose of a large number of this year's breeders, which will enable him to give more time, space and attention to the growing stock, and says that while it is not probable that he will find purchasers for all of his matured stock, yet he is going to offer in this sale every full grown bird on his farm. In short he has set a price on each and every bird—a price so low that it will save the purchaser several dollars by buying during July and early August, as all birds that are not sold during the summer will positively be held for much higher prices during the fall and winter.

The 40 Partridge Rock matings on Mr. Nofztger's farm this season contain exactly 359 birds and among them are 21 different birds that have been under first prize ribbons at Chicago shows, 17 that took second prizes, 6 that took third prizes, 5 that took fourth prizes and 2 that took fifth prizes at shows in the same city. His yards contain 4 first, 2 third and 2 fifth prize winners at Madison Square Garden, New York, and a total of 109 other different birds that have won a first, second, third, fourth or fifth prize at shows held during the past two or three years in Topeka, Indianapolis, Kansas City, Huntington, or at the Indiana State Fair.

When we consider that here is a breeder who originated a very popular new fowl and placed them before the public, and who is now offering for sale every one of his matured breeders, that have among them 168 different prize winners, 66 of which were first prize winners at the leading shows of America as named above, it is beyond any question the greatest summer sale of poultry of any breed or variety ever offered to the public.

The plan by which Mr. Nofztger purposes to sell these birds in this "special summer sale" is to offer single males and females or in quantities to suit the purchaser; besides he offers an extraordinary bargain in trios for \$15 to \$25 per trio and in pens containing one male and four females for \$25 to \$30 per pen.

In view of the high breeding and show quality offered at the special low prices in this sale we certainly urge that those of our readers who are interested in Partridge Plymouth Rocks and who will need some adult fowls for new blood in the breeding yards, for show purposes or for a "first start," will at once write to Mr. Nofztger, explaining what is needed and get his prices. Do not overlook the fact that this well-known breeder always guarantees every bird he sells to suit the purchaser or it is no sale, and Mr. Nofztger says, "The trains run both ways and I will always refund the purchase price, less return charge, whenever a bird is returned."

In summing up, this journal wants to say that this is the most unusual sale of poultry ever offered the public. First: Because every one of the 359 birds contained in Mr. Nofztger's breeding yards are offered to the public. Second: Because 168 of the 359 birds offered have been leading winners at America's greatest shows. Third: Because Mr. Nofztger, who is giving this sale, is the originator of the Partridge Rock fowl and the world's largest and best breeder. Fourth: Because he is offering to those who wish a start, an opportunity to secure a trio or pen of high quality breeders at a very low price, thus paving the way for a large number of new breeders of this popular fowl.

Such sales as this one are to be highly commended. They will go a long way toward a staple business and do away with the "get rich quick" idea, which so many of the breeders seem to have.

The F. L. Poultry Farm, R. F. D. No. 1, Verona, Pa., specialty breeders of Rhode Island Reds, are offering their this season's breeders for sale at bargain prices. They are breeders of both Rose and Single Comb Reds and their stock have been heavy winners at the leading shows, including Madison Square Gar-

den. Any one looking for bargains in choice breeders should not overlook this opportunity.

### CHICURE.

The King Remedy Co., of Rochester, N. Y., while young in business, have gained an enviable reputation as manufacturers of Chicure Poultry Remedies. The sterling quality of their products has rapidly created a large demand for their remedies, and from a small beginning they have expanded in leaps and bounds, occupying a large factory, which supplies Chicure Preparations to poultry breeders in all sections of the country. Their business is not confined to the eastern and

central states, as their representative states that a large share of their products is marketed west of the Rocky mountains.

Their phenomenal success speaks volumes for the quality of the remedies they manufacture, and demonstrates that the average poultry breeder is quick to see merit and take advantage of everything that tends to improve the business and aids in placing it on a more profitable basis.

It will be interesting to watch the progress of the King Remedy Co., whose members are practical poultry men, and who from all indications have placed on the market remedies that make good, and are receiving the stamp of approval from breeders in all parts of the country.

### Rhode Island Whites

A New favorite with a reason—At Chicago, Dec., 1912, in largest and best class of R.C. Rhode Island Whites ever seen, McCarthy's Peerless Strain made a clean sweep, winning 1st cock; 1st hen; 1st pullet; 1st pen; \$25 cup for best display and \$15 cup for best shape R. I. White. As every prominent breeder, both East and West, had his birds entered, it proves that the Peerless Strain is the best in the world. Send for our illustrated catalog and mating list. Carl D. McCarthy, Box Y, Kempton, Ind.

John W. Poley, Prop., Box A, Linfield, Pennsylvania

## If I Buy Baby Chicks Will They Mature Into Pullets Like These?

Will they grow into birds that I can feel proud of and that will lay Winter eggs in quantities, or win the blue ribbons for me, or will they be just scrubs that's the question before everyone who buys day-old chicks. It is not the first price that counts, but will they be right at maturity?

### Caldwell's White Plymouth Rock (Fishel Strain) "Baby Chicks of Quality"

#### From Utility Matings

Will mature into long backed, well made birds' pure white in color, that will be the secret of "Winter eggs." Every utility breeder is descended from known good layers that have been bred that way.

#### From Exhibition Matings

Will mature into blue ribbon winners. Every exhibition pen is made up of birds with good combs, of good type and chalk white in color, possessing the rich blood lines of generations of Fishel blue ribbon winners. Our birds were among the principal winners at the Indiana Fanciers' Show, Indianapolis, 1912.

#### A New Catalog Is Now Ready

One of the finest ever issued by any breeder. It tells just how "Baby Chicks of Quality" are produced and describes every grade of stock that we have to sell with prices. A copy is ready for you.

#### The Caldwell Selling Plan

Not only arranges for the man who orders in advance, but for the one in a hurry. Thousands of eggs are setting which will make possible

Delivery of any number on short notice.

R. C. Caldwell : Box 1021 : Lyndon, Ross County, Ohio

## SOME GOOD SALES.

The Monmouth Farms, of Freneau, N. J., the well-known breeders and exhibitors of S. C. Buff and White Leghorns, announce the sale of their first S. C. Buff Leghorn pen Madison Square Garden New York 1911 to J. R. Beard, of Greenwich, Conn. This pen is headed by Golden Boy 6th, one of the greatest living males of the day. Outside of that first pen 1912-13 New York. They believe this pen to be the finest pen ever shown and their opinion is shared by many exhibitors.

During the past month the Monmouth Farms have shipped three export orders, namely, 100 S. C. White Leghorn hens and 10 cocks to Brazil, 2 trios of White Leghorns to Venezuela and 5 exhibition White Leghorn cocks to Uruguay. This farm is in a position to fill all orders for Buff and White Leghorns, no matter how large or how small. Write for their catalogue and mention American Poultry Journal.

## LICENE KILLS THE LICE.

When other lice-killers fail, try Licene; it does the work every time. Send to the Licene Co., Pontiac Bldg. Chicago, Ill., 50c and they will send you enough Licene for 200 birds. Read this testimonial:

3854 Byron St., Chicago, Feb. 28, 1913.  
Gentlemen: After unsuccessfully using almost every known "lice killer," both in the powdered and liquid form, I bought a box of Licene at the Chicago Show last December. It has killed every louse and "nits" on my birds, and have saved at least 25 per cent in feed bills. Not a louse on my chickens now. Shall recommend Licene as the best and most scientific lice exterminator on the market.

Dr. R. H. McKenzie.

## FREE OFFER.

Radiatone is the name of a new and scientific remedy for poultry. It keeps chickens and hens well, and well hens lay. The manufacturers are so sure of this that they want to send a package FREE on trial, no results, no pay. See advertisement on another page. Address THE QUALITY DRUG STORES CO., KALAMAZOO, MICHIGAN.

## A FREE SAMPLE COPY.

A 4-months' trial subscription will cost you only ten cents. Stamps are acceptable. Address

Reliable Poultry Journal Pub. Co., Box E-13, Quincy, Ill.

Every raiser of fine poultry has been much interested in the constant endeavor of the poultry supply experts to invent a satisfactory leg band—one that can be simply and easily adjusted—and one that when once on they can be absolutely assured of its being there when needed. Mr. A. B. Moe, of Otis & Moe, Otis Bldg., Chicago, who is a practical poultry raiser himself and the inventor of the Moe's Top-Fill Fountains, has secured the patent rights on a simple self-locking metal band that he thinks solves the problem, as it can be adjusted readily with the fingers by simply pushing it together to lock, and when it is once on it is there to stay and can only be removed by destroying the band. These are now being manufactured in many sizes by Otis & Moe, Otis Bldg., Chicago. See their display advertisement elsewhere.

# CLASSIFIED ADS

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and five cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

## WANTED.

**WANTED:** 250 S. C. WHITE Leghorn pullets, range raised, April hatched. Delivery September 1. R. R. Tracy, Morrison, Ill. 7

**WANTED IMMEDIATELY.** I am looking for a man who has had practical experience in raising White Leghorns for egg and exhibition purposes, to take the management of a poultry farm that is up-to-date in every respect. At present it has between 1500 and 2000 birds. The farm is located 1 mile from a city of 60,000 people. A splendid egg trade is already established. The birds are all bred from New York and Chicago prize-winners and there is no better strain in the country. The owner desires to enter exhibits in the principal mid-Western Fairs and Poultry Shows this fall and winter. In writing, state age, experience, whether married, wages expected, and so on. Address, A. M. Cass, Box 398, South Bend, Ind. 6-8

## PRINTING.

Win the most remarkable record beyond all precedent in Barred Rock history at the imperial and most classic show of all America—Madison Square Garden, New York—this winter of 1913. Winning as follows:

First, second, sixth and eighth on cockerels. First and sixth on pullets. First, second and fifth on exhibition pens. First on cockerel mated pen. Second, third, fourth and fifth on cocks. The Imperial Prize of the show, Sweepstakes special for champion male. Sweepstakes special for champion female. Diploma presented by the American Poultry Association for best cockerel. Sweepstakes cup for best Plymouth Rock hatched in 1912, male or female, any variety. Challenge silver cup for best exhibition pen. Special best shaped male. Special best colored male. Special best colored female. Best cock, cockerel, hen and pullet, four best cockerels, four best pullets, \$25 special prize, presented by the New York Show for finest display. All silver cups and cash specials four times as many first prizes as any competitor. More first prizes than all competitors combined. More first, regular and special prizes than won by any exhibition of any breed.

## My Exhibition of 56 Birds Was the Best the World Has Ever Seen

No other Barred Rock breeder has ever produced or is producing such matchless quality. Every feather in my exhibit was bred on my farm. My First Prize Champion Cockerel and First Prize Champion Pullet are years ahead of their time. They are the produce of the highest skill. No other Barred Rock breeder has ever accomplished the unprecedented achievement of winning the two greatest prizes in the world, Champion Male and Champion Female, at one show in Madison Square Garden. For 25 years at New York my "Ringlet" victories have been complete: my clean sweep of 1ST, 2ND, 3RD, 4TH AND 5TH PRIZES on pullets has never been approached at Madison Square Garden and stands alone and unequalled. The Imperial "Ringlets" are the standard by which all other Barred Rocks are judged. To meet success in winning prizes you must have my birds and eggs. I will sell you grand exhibition birds for any show, and breeders of this Richest First Prize, New York, blood. Richly illustrated 70-page catalogue upon request. It is full of original pictures of New York winners from life.

**Eggs** From the finest exhibition matings in all the world, \$10.00 per setting; four settings, \$35.00 one hundred eggs, \$60.00. One-half these prices after June 10th.

## "Not a Dead Chick Not a Single Cripple"

**Hall Operator Tells of Success with Custom Hatching**

**SUNSWICK POULTRY FARM**  
**South Plainfield, N. J.**

Hall Mammoth Incubator Co., Little Falls, N. Y.  
Gentlemen:

Just a few lines to let you know how your machine is working. I am hatching out 80% of fertile eggs and that certainly is more than I ever expected to do when I installed it, but today's hatch I consider a wonder. Three weeks ago a lady brought me 300 eggs to incubate. Today she came for the chicks and took away 254. There was not a dead chick in the shells, nor a single cripple among the lot. They were the strongest bunch I ever saw.

With a proper cellar and a careful man to run it, give me a Hall every time.

April 15, 1913

Yours very truly,  
Rufus Delafield.

### Prepare Now for Next Season

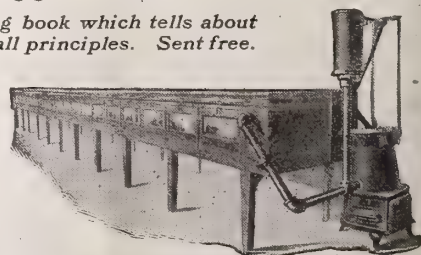

Your profits in custom hatching next season depend on an early start. Dispose of as much labor as possible in advance. Plan to complete additional cellar space before frost. Place your order for your Hall Mammoth as soon as possible—and we will make up and deliver your equipment before the rush—plans and specifications free.

The Hall is endorsed by more practical poultrymen than any other make of Mammoth type—because it is producing greater results.

Write today for our big book which tells about custom hatching and Hall principles. Sent free.

## THE 1912 REVISED EDITION OF THE AMERICAN STANDARD OF PERFECTION

The only American authority on the required characteristics of all breeds and varieties of chickens, ducks, turkeys and geese. You cannot raise, mate, exhibit or sell fowls intelligently without it.

This Great Book was revised this year (1912) and gives the correct Standard shape, color and weight of every recognized variety of chickens, ducks, turkeys and geese, as well as the disqualifications of each variety. The book contains 332 pages of descriptive matter and ideal illustrations of the different varieties of fowls, photographed from living models. Also

### Five Full-Page Illustrations of Feathers in Natural Colors

to guide the breeder in getting the correct color of plumage on his birds. No one can breed birds of any variety for exhibition without a copy of the American Standard of Perfection as a guide, and it is the only book of its kind published in this country. It is authorized, copyrighted and published by the American Poultry Association. Price postpaid, cloth, \$2; leather, \$2.50

### OUR SPECIAL MONEY-SAVING OFFER

**The Standard (cloth) and American Poultry Journal one year.....\$2.50**

If you want leather binding add 50c to this price. Canadian subscribers add 25 cents per year for postage; foreign 50 cents

**American Poultry Journal Pub. Co., 542 So. Dearborn St., Chicago, Ill.**

# TYPEWRITER SENSATION

TWO DOLLARS  
A MONTH

**Buy a genuine standard No. 2 SMITH-PREMIER Typewriter and at \$71.70 less than the manufacturers price.**

Never before has anything like this been attempted. Dealers get \$3.00 a month rent for this make of machine not nearly as perfect as the one we will send you, and you pay only two dollars a month and own it.

**Send the Coupon and We Will Ship You This Smith-Premier Typewriter**

When the typewriter arrives, deposit with the express agent \$8.30 and take the typewriter three days and try it. If you find it to be the best typewriter you ever saw, satisfactory in every respect, keep it and send us \$2 each month, until our special price of \$28.30 is paid. If you don't want to keep it, return it to the express agent, and he will give you back your \$8.30 and return the typewriter to us. We will pay the return express charges.

You won't want to send this machine back after you have seen it and tried it. You can't imagine the perfection of these machines till you see one, and the price is \$71.70 less than the catalogue price, and it is guaranteed just as if you paid \$100.00.

Perfect machines only, complete outfit, nothing extra to buy, no strings of any kind to this offer. Just think of buying such a typewriter for \$8.30 down and \$2 a month. Thousands of people have paid \$100.00 cash for Smith Premiers. It's standard, by many considered the best typewriter ever built. A key for each character, so each character is always the same; a type brush for cleaning the type built into the machine; the tilting carriage; comes to you with tools, rubber cover, everything ready. It runs beautifully. It's wonderfully simple and strong. It will last a lifetime. I sold a similar supply of these beautiful machines about a year ago to everybody's satisfaction.

**Only 200 Orders Will be Filled on This Offer—Act Today to be Sure**

The coupon states the terms. Fill it out, send it now, today. You can't lose, and it's the greatest economical typewriter opportunity you will ever have.

## COUPON

**HARRY E. SMITH,**  
No. 180 N. Dearborn St., Chicago.

Ship me a No. 2 Smith-Premier f. o. b. Chicago, as described in this advertisement. I will pay you the \$20.00 balance of the special \$28.30 purchase price, at the rate of \$2.00 per month. The title to remain in your name until fully paid for. It is understood that I have three days in which to examine and try the typewriter. If I choose not to keep it I will carefully repack it and return it to the express agent. It is understood that you give the standard guarantee for 1 year.

Automatic Sanitary Trap-Nest Company

DULUTH, : : : : MINNESOTA

**Tompkins' Rhode Island Reds**

**BOTH COMBS**

Better now than ever before. Hundreds of high-class breeding birds at reasonable prices. Write us before ordering elsewhere. Eggs from high class pens.

Concord Poultry Yards, Harold Tompkins, Prop., Concord, Mass.

**ONLYA FARM  
WHITE WYANDOTTES**

We now have for sale about one hundred hens and twenty-five cockerels and cock birds. We have priced these birds at from \$2.50 to \$5.00 apiece, at which prices they are big bargains, all of them we have used in our matings the past season, and anyone contemplating buying high class breeding stock at bargain prices will miss a great chance if they overlook this sale. All birds sent on approval.

Chas. Staaff, Mgr. : Florham Park, N. J.

**Bargains in Chicks**  
for July, August and September

There is big money in raising chicks for the fall and winter market. We make a specialty of summer broiler chicks, hatched from large breeds only. We guarantee safe delivery of live, strong chicks to your Express Office. We have also cut the prices of all our pure bred fancy stock. Our prices on chicks are lower than most breeders ask for eggs of the same quality. If you have never tried our "better hatched" chicks you have never know what strong chicks are, the kind that live, mature rapidly and grow into money. Order direct from this

list. A shipment each week. No delay. We are the only large plant doing business all summer. S. C. White and Brown Leghorns, 25 for \$2; 50 for \$4; 100 for \$8; 500 for \$40. Barred Rocks, White Rocks, S. C. Black Minorcas, S. C. and R. C. R. I. Reds., 25 for \$2.50; 50 for \$5; 100 for \$10; 500 for \$50. White Orpingtons, White Wyandottes, 25 for \$3; 50 for \$6; 100 for \$12; 500 for \$60. Assorted, left after regular orders are filled, no choice, 25 for \$2; \$50 for \$4; 100 for \$8; 500 for \$40. Mixed broiler chicks from large breeds only, 100 for \$8; 500 for \$37.50. Send money order for full amount with order to

## Barred Plymouth Rocks

We are now selling eggs from our prize winners of the Chicago, Indianapolis, Memphis, Louisville and Shelbyville shows at less than half price. They are the same eggs we sold this spring at our regular prices and they are from the same birds we are raising all of our own exhibition stock.

Eggs \$1.00 per 15 \$5.00 per 100

We also offer exceptionally low prices on our surplus breeding stock and as long as they last will sell our best breeders at the closest possible figures. Write us postal and let us tell you what we have to offer. Write today for 40-page catalogue No. 3.

POPE & POPE, Box A, Louisville, Ky.

## Write for Your Copy of the CYPHERS Book—Free

It is *more* than a catalogue—is *educational, helpful, valuable*. Contains 244 pages—many of them filled with *sound advice* based upon the knowledge and experience of some of the foremost poultry authorities. "Profitable Poultry and Egg Production" deserves to be called a poultry text-book. Its chapters on right methods, newest developments and proved results at the Cyphers \$75,000 Poultry and Demonstration Farm make the book well worth paying for—yet it is *free*. Also lists more than a hundred articles needed and used by progressive poultry keepers.

# BUILDING MATERIAL

CHICAGO HOUSE WRECKING COMPANY  
THE GREAT PRICE WRECKERS

## B-I-G SUMMER OFFER Special

Right now is the time to buy your lumber and building material, even though you do not need it at once. Prices will never be lower. We have determined that the summer of 1913 is going to be the biggest "SALES" time in the history of this Company, and the way we will do it is by taking our previously low prices, (the lowest ever known and lower than any ever offered by any other concern on earth), and cutting them once again, so that they will be CUT TO THE FINISH. Therefore, if you are awake to the opportunity, here is your chance to buy at a saving of from one-fourth to one-half. We have mammoth stocks right here at our Chicago Plant, and at mills both on the east and west side of the Mississippi river and can make prompt shipment to all points in the United States. We are telling you facts. There are no half-way statements made by us. If you are ready to order, tell us what you want; send us a list of the material you require and we will put a proposition before you that will mean money in your pocket.

**No Money Down** While our established terms are CASH and our guarantee, as published in this advertisement, is so broad and binding that no one need hesitate, yet, if you do not want to pay cash, it will not be necessary. All we want to know is that you are responsible, and that the goods will be paid for when they reach destination, and prove as represented by us. This certainly is a liberal offer. We have unbounded faith in your honesty and integrity, as well as in the quality of our material and our ability to fill your order correctly, otherwise we would not take all the risk.

Grade for grade, our material is the best that money can buy. Every dollar's worth of merchandise offered you in the building material line is brand new, first-class stock; all grade specified and guaranteed. Our lumber and mill work is all brand new, of standard manufacture and is better than can be bought in any first-class lumber yard in the United States. Our prices are rock bottom. Think of buying a beautiful, modern, up-to-date, two-panel first quality, interior door for as low as \$1.84. You must get our prices.

**ONE-FOURTH to ONE-HALF  
IF YOU BUY AT ONCE SAVED!**

## \$738.00 Buys the Material to Build This House

This beautiful, up-to-date, full two story, 7 rooms and bath, home, Has been sold nearly 1000 times; copied and imitated all over the United States. Our price and quality cannot be equaled—the price is easily 25 to 50 per cent below local dealer's prices. Immediate shipment right from our Chicago stocks, where you can come and see it loaded. No money down.

\$850 to \$900 is the price asked for similar houses by other concerns. Here, then, is one of our special summer offers, and one which we have been considering for a long time, and have finally decided to make, to all those who during the summer of 1913 see fit to take advantage of this offer.

This home is thoroughly practical. Solid, substantial construction throughout. Material all that can be asked. No. 1 joists, rafters and studding; Clear Siding, Clear Flooring, Clear Yellow Pine interior trim, and above all, the biggest bargain that we have ever attempted. This home has been built nearly one thousand times; we have hundreds of letters (unsolicited) from customers who purchased from us, some of whom saved as high as \$1,000 on the complete home. If others have done it, you can do it by dealing with us.

Now, if you will consider seriously purchasing this home between now and September 1, 1913, we will furnish you the material at the above prices and name you a FREIGHT PREPAID price to your railroad shipping point, that will be far lower than you can obtain elsewhere. We have determined to sell at least one thousand houses before the 1st of September, and you must write today for our beautiful 96-page Book of modern houses, Bungalows, Barns, Portable Houses and Portable Garages. It is the most perfect book of House Plans ever published. It contains illustrations, clear floor plans, correct low prices—all at once. Use the coupon below, or merely drop us a line saying where you saw this advertisement and tell us in a general way what you want. We will reply immediately. There will be no obligation of any kind on your part.

**\$2.00 Buys Complete** perfect Blue Print Plans and Architectural Specifications, including full descriptive Material List, giving the size, style, quality and catalog number of the various items entering into the construction of this house. The same price will buy a set of Plans for any of the houses shown in our famous BOOK OF PLANS. If you haven't a copy of it, be sure and write for it at once.

## Send Your Complete Lumber Bill for Freight Paid Estimate

We will make you an estimate and name you our lowest freight prepaid price that will surely mean a big saving to you. Do not put it off—write today.

Come to Chicago. Make an inspection of our mammoth plant, located in the heart of the greatest manufacturing district in the world. You will be agreeably surprised at the magnitude of our establishment, our stocks and our service. We are the only concern that has all its material right here at one plant, where you may come and personally inspect same and supervise the loading of your own car. Immediate action and attention guaranteed.

## GUARANTEE

**Our Broad and Binding Guarantee:**—This Company has a capital stock of ten million dollars. Its honesty and upright methods have been known for 20 years; we have thousands upon thousands of customers who have yearly taken advantage of our special sales. We say to you, that no matter what you buy from us, if you fail to find the material absolutely satisfactory, and according to your requirements and expectations, then we will take back such unsatisfactory material at our freight expense and pay the freight charges both ways. No fairer offer could be made by any one. We are confident that the goods are right—that's why we have no hesitation in making you this broad, general guarantee under the terms of which you can buy with absolute safety. You will get what you buy, because otherwise we will be under an obligation to take back material at an expense which would not permit us to do anything but what is fair and square. We refer you to any bank anywhere; to any commercial agency; to any express company, to the publisher of this or any other paper and to the world in general.

## Roofing at Half Price

Galvanized Steel Roofing is Fire, Water and Lightning Proof

We bought 20,000 squares of this Corrugated Iron Roofing, which we offer at this remarkably low price. It is new, perfect and first-class, but light weight. The sheets are 22x24 ins. x 1/4 in. corrugated. Our price of \$1.25 per square is f. o. b. cars Chicago. When ordering this item specify Lot No. BD-100. This is not galvanized, but black steel roofing. Write us today for our special FREIGHT PREPAID PRICES on new, galvanized roofing. We are offering prices lower than ever before offered in the roofing business. Galvanized roofing at \$2.50 per square and up. Ask for free samples.

We can furnish anything needed in Roofing, Siding or Ceiling.

**62c per 108 Sq. Ft. buys best Rubber Surface "Ajax" Roofing**

Here again we show the lowest price ever known for roofing of quality. This smooth surfaced roofing we are offering is our one-ply "Ajax" brand—f. o. b. Chicago; at 75c per square, we pay the freight in full to any point East of Kansas and Nebraska and North of the Ohio River, provided the order is for at least 3 squares. Prices to other points on application. "Ajax" roofing is guaranteed to wear as long and give as good service as any Ready Rubber Surfaced Roofing on the market. It is put up in rolls of 108 square feet, and contains three to four pieces to the roll.

We have other grades of Ready Roofing, which we offer at prices easily 30 per cent below regular quotations. Write today for free samples and Roofing Catalog. Fill in the coupon.

## Wire at Half Price

**BARB WIRE Less Than 2c Per Rod**

New galvanized, heavy weight barb wire, put up on reels about 100 lbs. to the reel. Lot 2-BD-26, per 100 lbs. \$2.05. Galvanized barb wire, light weight, first grade, best made, put up exactly 80 rods to reel, 2-point barbs. Lot 2-BD-28, per reel \$1.40.

**WIRE NAILS, Per Keg, \$1.38**

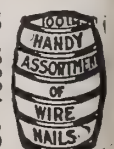

10,000 kegs, put up 100 lbs. to the keg mixed, all kinds together, regular nails, such as made by nail factories. Lot 2-BD-33, price per keg \$1.50. 1,000 kegs of ten pennyweight regular new wire nails, 100 lbs. to the keg, while they last, per keg \$1.85. Write for our free Wire and Fence Catalog. Gives valuable information to any land owner. Send coupon.

**Smooth Galvanized Wire, Per 100 Lbs. \$1.25**

It is suitable for fences, stay wires, grape vines or for any ordinary purpose where wire is used. This galvanized wire is irregular in length—it ranges anywhere from 50 to 250 feet. \$1.25 is our price for No. 6 gauge. Other sizes in proportion.

**15c Per Rod Buys Best Hog Fencing**

Here is another one of our remarkable bargains. A high grade, strictly perfect fence made of No. 9, 11 and 12 wires, perfectly adapted for hogs and general farm purposes, 26 ins. high, square mesh, put up in suitable size rolls. Lot 3-BD-31 per rod 15c. Other heights in proportion. Staples, 100 lbs. \$1.75.

# CANDEE

## Throw Away Your Oil Lamps

**Save on Your Fuel Bill, Hatch More and Stronger Chicks and Make More Money.**

*By installing a Candee you retain the good features of the small machines, stationary egg trays and automatic regulation and get rid of oil lamps.*

*The Candee burns coal,*

*Read the answers given below by Candee operators, based upon this season's work. They have run all the standard makes and have written the facts over their signatures.*

### What are You Buying in Incubators? Claims or Facts Backed by Figures!

Size of Candee Operated	Time Spent Installing	Total Time Daily Running Machine*	Number of Different Makes Used	Candee Fuel Cost Compared with Machines Used Before	Candee Hatching Compared with Machines Used Before
1200	Half day	45 Minutes	1	30% cheaper with coal at \$14 a ton	About 10% better
1200	One day	½ to ¾ Hour	14	Much cheaper	Larger percentage
1200	6 Hours	80 Minutes	3	Less than one-fifth	Better
1200	10 Hours	½ Hour	2	Same for 1200 as one 150-oil machine	10% better
1200	8 Hours	1 Hour	1	Same for 1200 as one 240-oil machine	Double percentage
1200	2 Days	1 Hour	2	Much cheaper	Better
1800	6 Hours	1½ Hours	1	Same for 1800 as 220-oil machine	25% better
1800	1 Day	1 to 2 Hours	1	Save at least one-third	Better than any small machine
1800	1 Day	2 Hours	1	Cheaper	Larger percentage
2400	Not given	2½ Hours	1	Candee only one-fourth	About 5% better
2400	3 Days	3 Hours	5	Less fuel and less labor	Better every way
2400	1 Day	1 Hour	3	Candee 10c a day, 6c for 390-oil machine	50% better
2400	20 Hours	2 Hours	5	Less for 2400 than 400-egg oil machine	Far ahead of any small machine
3000	2 Days	1 Hour	4	¼ as much as same oil capacity	Beats them all
3000	2 Days	1½ Hours	3	Much cheaper	10% better
3000	2 Days	1 Hour	5	Less	About the same
3000	2 Days	½ to 2 Hours	2	Oil costs twice as much	Larger number
3000	2 Days	35 Minutes	1	¼ as much fuel, one-tenth the time	Beats 'em all hollow
3600	15 Hours	2½ Hours	1	Don't want any more lamp machines	About 10% more
4200	Not given	1 Hour		Half the cost of oil	25% better
4200	2 Days	½ Hour	1	Same as one 400-egg oil machine	5 to 8% better
4800	2 Days	3 Hours	3	Very much less	10% better of all eggs set
6000	Not given	4 Hours	1	Much cheaper	Has them beat a mile
6000	Not given	3 Hours	3	Much cheaper	Better results
9000	3 Days	1 Hour	1	About ½	20% better
10200	4 Days	3 Hours	1	About half less	20% better

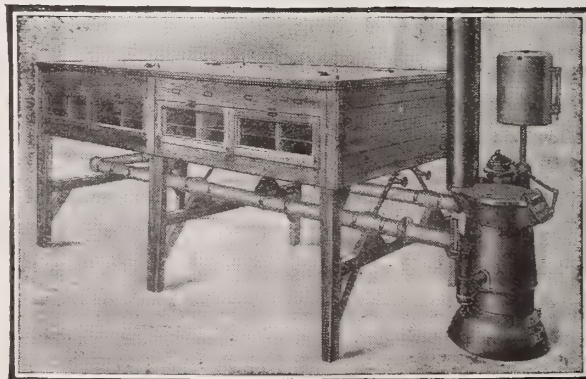

\* Includes turning and cooling the eggs.

### Write Today for Catalogue.

With our free catalogue you will receive the actual results of Candee Incubators and Brooding systems in all parts of this country and Canada.

This 1913 Candee has revolutionized the incubator industry and it will pay you to write to-day for a catalogue so that you will be posted on the situation.

We furnish complete service, building plans, etc.

A 1200-egg Candee Automatic Sectional Incubator

**Candee Incubator & Brooder Co., Dept. 2, Eastwood, N. Y.**

The Only Incubator Company Who Manufacture Their Own Heaters

# S·C·WHITE LEGHORNS

## THAT LAY, WEIGH AND WIN

There is more real proof in a teaspoonful of experience than in a demijohn of talk.

If you have ever bred the GROVE strain of SINGLE COMB WHITE LEGHORNS, you know from experience that they represent just what we claim for them.

Upon receipt of 50 cents in stamps or coin, we will send you postpaid our new sixty-four page book on poultry, which explains in detail the method of raising, feeding and conditioning line bred poultry for successful results.

**E. W. Grove, Jr.**  
Route 1, Clayton, Missouri

# ALDRICH WHITE ORPINGTONS

## THE STRAIN OF QUALITY

**I**F you are **counting on winning** at your show, we can supply you with the **prize-winning quality**, for we have this year the best birds that have ever been bred in America or England. We now have over 1,000 young birds of **supreme quality**—a marvelous perfection; nearly every bird has rich red eyes, a five point comb, short shanks, and wonderfully heavy bone, full round broad breast, broad back, with width carried well back, the true Orpington type, every bird being absolutely snow white.

These birds were all bred from our finest males and females, that have won prizes at all America's greatest shows: Chicago, Cleveland, **Madison Square Garden**, Baltimore, Allentown, St. Louis, Atlanta and Augusta, where **during the past two seasons** that we have exhibited, we have won a total of **110 out of the 300 prizes offered**, competing with over 2,000 of the best birds shown by exhibitors from 36

States, as well as from Canada and England.

Our win at the great **Chicago** show **last December**, has **never been equaled**; we won the **display** with 68 points against 66 to all the other 44 competitors combined, also the **gold special** for champion male, and the **President's \$100 cup**, and over **19 other special prizes**. Following this unrivaled triumph, we carried off **5 firsts** and 10 other prizes at **New York and Baltimore** during the same week, thus firmly establishing our claim to having the **quality White Orpingtons of America**.

**During the past season our customers have won** at shows in all parts of America: at Boston, Atlanta, Wheeling, Columbus, Minneapolis, Louisville, Hagerstown, Little Rock, Shreveport, Nashville, Bismarck, Springfield, Buffalo, and at many others; in many cases defeating imported or "Guaranteed to Win" birds, for which big prices were paid.

Our young birds this year are **much superior** to those of last season, and many of our January hatched cockerels and pullets are now up to standard weight, and many of them were bred from our first prize cocks at Chicago 1912 and first prize cockerel New York 1911. Every bird is conditioned, free of charge, by our superintendent, Mr. Rawnsley, and he cannot be beaten in conditioning birds, is the verdict of all who saw our display at the great shows last winter.

**Every Bird** on our farm is personally **looked after, reared, selected and conditioned by The Owners**, no outside help being depended on; we only breed the **highest quality White Orpingtons**, and in devoting **our entire time** to it lies the secret of our extraordinary success, and thus can we supply our quality at reasonable prices. We ship birds on approval, and **guarantee satisfaction**.

Let us quote you prices either on **show birds** or **large, vigorous breeders**, to build up your flock. We will reserve you a winner, and condition same, on receipt of a **small deposit**, and would advise early inquiries.

Send for our 56 page catalogue, and you will become one of our many satisfied customers. Mention American Poultry Journal when writing.

## Egg Production in Fall and Winter

Increased Production From August to February, the Months of  
Greatest Scarcity.

By J. B. Morman, Kensington, Md.

THE OUTPUT of eggs is steadily growing. According to the report of the Secretary of Agriculture for 1912, the production of eggs on farms amounted to 1,700,000,000 dozen that year. But all farmers do not keep fowls, in fact, only about 89 per cent of them do so. There is great opportunity, therefore, for a large increase of eggs by the extension of poultry keeping to more of the farms in the United States alone.

But egg production may be increased by improving the laying qualities of the fowls. The census shows that the average yield of eggs per fowl on farms is only about six dozen a year. With good laying strains of fowls, however, an average yield of twelve dozen eggs per fowl is easily attainable, so that there is great room for improvement in this direction. In addition to egg production on farms, commercial poultry plants and large numbers of smaller poultry keepers are annually producing enormous quantities of eggs concerning which no data are available, since the Bureau of the Census reported the farm production of eggs only. Under all these possibilities of increasing the egg supply, it is evident that egg production is becoming a very valuable industry in the United States, and, according to the Secretary of Agriculture, has been steadily increasing in importance.

Notwithstanding the increase in egg production, the demand for eggs is growing even faster than the supply. This is probably due in part to the increasing price of meat. The decline in meat production is bound to give an added impulse and value to the poultry industry. Of this fact we can rest absolutely assured. There is a great prospect ahead for the progressive poultry keeper. The number of eggs used month by month in our large cities is almost beyond belief. Here are a few figures bearing on this subject which I quote from the current number of the Crop Reporter, issued in June by the U. S. Department of Agriculture. The number of cases of eggs, containing thirty dozen of eggs each, received in five leading cities in May, 1913, was as follows:

Cincinnati .....	123,000 cases
St. Louis .....	203,000 cases
Boston .....	389,000 cases
New York .....	710,000 cases
Chicago .....	863,000 cases

While the demand for eggs has steadily increased, there has been a gradual rise in the price of eggs during the past eight years, so that, under favorable conditions of production, there is every reason for believing that egg production on farms particularly, as well as on the commercial poultry plant, whether large or small, can be made a profitable business. The average prices of best fresh eggs per dozen in large wholesale lots at New York and St. Louis markets during the month of June for past three years were as follows:

	New York	St. Louis
June, 1911.....	18-25c	11-13c
June, 1912.....	21-27c	16-17c
June, 1913.....	23-25c	17-17c

### Seasonal Centers of Production.

As is well known, the supply of eggs varies with the season of the year, and the price of eggs varies with the supply. Though eggs are produced in every state of the Union, only Ohio, Indiana, Illinois, Iowa, Minnesota, Nebraska, Kansas, Missouri, Texas, Tennessee and Kentucky produce more eggs than are consumed within their own borders. Nor does this production of eggs cover the entire year, but only those months when climatic conditions are favorable to abundant laying. Fortunately, in addition to the general production of eggs throughout the country, there are seasonal centers of production which give a continuous supply of eggs practically the year around. Thus, in Tennessee and Kentucky, the chief laying season is from December to April; supplies from southern Ohio, Missouri, Texas and southern Kansas add their surplus eggs to the market in March and April; in the later spring northern Kansas, Iowa, Indiana, Illinois and the central states generally have their heavy season of egg production; and Minnesota and Michigan, with a still later season, help out the other chief producing states somewhat. The chief egg producing season, therefore, seems to range from December to June, when eggs are at their best and are most plentiful; and this is the season of the year when the surplus eggs are rushed to cold storage in order to meet the demand for fall and winter eggs. Investigations by the Department of Agriculture show that the output of fresh eggs at all times of the year is far from adequate to supply the country's demands.

It is plain, therefore, that the general period of scarcity of fresh eggs is in fall and winter, and the progressive farmer or poultry keeper will do a wise thing if he takes advantage of this growing opportunity and strives to meet the demand of the market during these months of the year when prices are at their best and the prospects of profit-making the greatest. The production of fresh eggs to supply the fall and winter trade of our cities has become a real problem well worthy of brief consideration at the present time. For it seems strange that, with the progress made in scientific poultry culture and the development of the art of artificial incubation, so much dependence has to be placed on cold storage eggs during so many months of the year. With the wide range of climate of our great country, and the great adaptability of the South for the fall and winter production of eggs, there should be no reason why a constant supply of strictly fresh eggs could not be furnished to the great egg market centers all the year around. The outlook of this side of poultry keeping is certainly as bright as any line of industry in which the American people are at present engaged.

### The Economics of Cold Storage.

The economic aim of those engaged in the production of poultry and their products is to supply the demand for consumption without recourse to artificial means of preservation. No matter how skillful are the means of preservation, more or less of deterioration in the product is bound to occur, and the longer the time the object is kept under these artificial conditions the greater is the deterioration. Investigations by our government have been made on the effects of the cold storage of eggs on the economics of the industry. These investigations have revealed the fact that the effect

on the quality of the eggs is bad, and that existing conditions are bad for farmer, poultryman, packer, merchant and consumer. The result of these investigations, together with a stricter demand for the enforcement of our pure food laws, makes it plain that the increase of the supply of fresh eggs in fall and winter will be almost imperative. The high price which fresh eggs bring at those seasons of the year is leading many up-to-date poultry keepers to specialize in this direction, and they are reaping rewards in increased profits. Many of the agricultural experiment stations are emphasizing this feature of the poultry industry and are particularly eager to have the farmers of our country take more kindly to poultry raising for egg production as a source of ready money income at a time of the year when farm work is not pressing and time hangs more or less heavy on their hands.

no matter how much effort is put forth to increase egg production from August to February, the months of greatest scarcity.

The results of the above outlined investigations into the egg supply problem make it plain that practical suggestions from poultrymen along this line ought to be of some value. There is no question, I think, that the question of providing a sufficiency of fresh eggs during the fall and winter months to meet the demand is not only a live problem but one of great importance to both producer and consumer.

#### Relation of Climate to Egg Production.

The production of eggs is widespread throughout the United States and Canada. The range of climate covered by these countries covers practically every phase between the frigid and torrid zones. A recent Department of Agriculture bulletin says regarding the relation of climate to egg production as follows:

"If one considers the number of months each year when climatic conditions preclude egg production almost entirely over nearly the whole of our great egg producing territory, it is plain that some provision for these months of scarcity must be made from the season of plenty, if eggs are to appear the year round on the tables of any except wealthy people."

While climate certainly does affect egg production to a certain extent, the science of poultry culture has a tendency to counteract the effects of climate by making egg production possible all the year round. There are certain things to be considered, such as the production of chicks so that they will mature early in the fall, systematic and scientific feeding to meet the conditions of climate, and a proper system of housing. With these conditions fulfilled, there is no reason why climate should preclude the possibility of profitable egg production during the fall and winter months: There is no

The principal months when eggs are put in cold storage are April, May and June, and about 80 per cent of the total of cold storage eggs are placed in warehouses during these months. Now, when are these eggs taken out for consumption? In the year 1909-10 the Department of Agriculture investigated the removal of eggs from storage at different times, and the results were as follows:

Eggs removed within 3 months after storage,	14.3%
Eggs removed within 4 months after storage,	22.6%
Eggs removed within 7 months after storage,	75.8%
Eggs removed within 10 months after storage,	99.9%

It is plain, therefore, that more than three-fourths of the eggs consumed during the fall and winter months which are taken out of cold storage are anywhere from 6 to 8 months old. There has been little or no improvement in the economics of the cold storage of eggs since these investigations were made, so that the figures may be regarded as applying to the present time. Under these circumstances it is no wonder that strictly fresh eggs are in such great demand during the fall and winter and that so many persons refuse to eat eggs during these months of the year. There is absolutely no danger that the increase in egg production in fall and winter will reduce the price below the level of profit-making, since the consumption of eggs would be greatly increased if their freshness is guaranteed. For this reason the demand for fresh eggs will probably more than keep pace with the supply,

biological reason why fowls should not lay in any climate if they have reached the egg-laying period; and this may be true in a climate as severe as western Canada, which has not been able to supply its egg demand for years, having to import eggs from the United States and even from China. If fowls are mature, are well fed, and are properly housed they ought to lay almost anywhere.

The agricultural experiment stations in Canada are working on this theory, that western Canada can supply its own egg demands all the year round. A recently Daily Consular and Trade Report says that attempts are being made to awaken the farmers to the prospects of successful egg pro-

duction even under their trying conditions of climate, and it adds this significant statement:

"The agricultural colleges in the West are now devoting much time to poultry raising, and lectures are included in the curriculum applying exclusively to the care and raising of poultry. At present there is quite a demand for high-class stock suitable for this climate, and a great many birds are annually imported from the United States, as the American line, which includes all the Plymouth Rock breeds, as well as the Rhode Island Reds, are pronounced the best suited for western Canada. It has been urged, because of the severe winters of western Canada, that poultry would not do well; and this may be, in large measure, the reason for the high prices which obtain for fresh eggs. There are farmers, however, who maintain large poultry farms and by careful feeding and handling are able to make a large profit upon the investment."

The severe climate of western Canada, therefore, does not preclude the possibility of profitable poultry keeping, for certain hardy breeds are not only in great demand but do well there. In our own country, the Maine Experiment Sta-

laying period. Different breeds of fowls do not all begin laying at the same time. Leghorns and related breeds lay anywhere from six to eight weeks sooner than do the heavier breeds, such as the Plymouth Rocks, Wyandottes and Rhode Island Reds.

Fowls are variable both as to the time of beginning to lay and in egg-laying capacity. Pullets which begin to lay a little earlier than the run of pullets for that particular breed, especially if they show a tendency to become prolific layers, are undoubtedly the fowls which should be selected for laying the basis of better hens. Experiments by the Maine Experiment Station for ten years with their highest layers did not, however, result in an increase in egg production in fall and winter. There were two reasons for this. First, the best laying pullets were descendants of fowls all of which had already laid 200 or more eggs each in their pullet year; and, secondly, winter laying is not an inheritable character but depends more upon the age of the pullet and the care it receives than anything else. As a rule, when a pullet reaches the age of maturity for egg production she will lay, no matter what climatic conditions prevail. The crucial test for the fall and winter production of eggs is to have pullets the proper age to come into laying, the poultryman doing the rest by seeing that his fowls are well housed, fed and managed.

Another practical question relating to the fall and winter production of eggs is whether to keep hens or pullets. This is a subject recently being given attention by our experiment stations and farmers' institute workers. In this connection I will briefly give a chapter from my own experience.

During the past two winters I have kept the data carefully from my own flock as to the superiority of pullets over hens for the winter production of eggs, with the following results, taking the months of December, January and February as the winter months:

#### Winter 1911-12.

32 pullets laid in three months.....1,130 eggs  
20 hens laid in three months..... 298 eggs

#### Winter 1912-13.

27 pullets laid in three months.....1,190 eggs  
26 hens laid in three months..... 549 eggs

In both years the hens were practically all the preceding year's pullets which had made a good record in egg production. Notwithstanding the fact that during the first winter all the pullets were not laying in December, they laid nearly three times as many eggs as the hens when the number of hens and pullets are reduced to the same ratio; and in the second winter, with practically the same number of hens and pullets, the latter laid almost double the number of eggs during the winter. Taking the results for the two winters, it is evident that pullets are capable of producing from two to three times as many eggs as hens.

But now let us consider what we may well call the seasonal production of eggs, dividing the years off into three months' periods, and the results in egg production were as follows:

	Eggs laid
1910-11—March, April, May.....	2,148
June, July, August.....	1,262
September, October, November.....	773
December, and January, February, 1911.	1,345
1911-12—March, April, May.....	2,277
June, July, August.....	1,434
September, October, November.....	686
December, and January, February, 1912.	1,428
1912-13—March, April, May.....	2,711
June, July, August.....	1,983
September, October, November.....	967
December, and January, February, 1913.	1,739

These figures show plainly enough that, so far as my experience has gone during these three years, the problem of the seasonal production of eggs has been shifted from the winter to the fall. In fact, the egg yields in winter compare very favorably with the other seasons, and even surpass or nearly equal the yields for the months of June, July and August. The great problem with me, as it undoubtedly is with many other poultry keepers, is to produce a sufficient number of eggs during the fall season, embracing the months of September, October and November. The figures show, however, quite a gain during last fall, due, in my judgment, to the effect of breeding from early and prolific layers, which gave me a greatly increased egg yield in 1912. I still believe that the problem of the fall production of eggs can be solved by extra early hatching of chicks, giving them good care and providing for their comfort during the hot months of summer. Since I use only hens for incubation, the advantage of artificial incubation of chicks for the fall production of eggs becomes apparent. Proper climatic conditions, such

tion has done excellent work in breeding a line of fowls to stand severe climate and produce eggs during the fall and winter months. While the conditions of climate, then, can be met by scientific poultry keeping, so egg production is possible during the severest months of the year.

#### The Practice of Scientific Principles.

The outcome of recent investigations along various lines relating to egg production in fall and winter seems to rest mainly on the carrying out of certain practical and scientific principles. If properly carried out, these principles will undoubtedly result in increasing egg production in fall and winter under almost any climatic conditions. Among other things, they include a knowledge of the laying periods of different breeds, the keeping of pullets rather than hens for eggs, and the proper feeding and housing of fowls to meet the conditions of climate. In regions where climate is not severe, with our present methods of artificial incubation whereby we can regulate the production of chicks so that they will mature at the time of year desired for egg production, a steady supply of strictly fresh eggs is possible all the year round. Any live farmer or poultry keeper can readily put these principles to the test.

One of the first things is to know the biology of a breed's

as prevail in a large part of the South, together with early artificial incubation of chicks, there should be no longer any egg problem for any month or season of the year. By hatching sufficiently early and breeding from vigorous stock, fowls should be produced which as layers should offset any climatic conditions either in the United States or in Canada.

There are a few other points regarding the care of fowls which must be considered with reference to egg production. Houses should be built to keep out rain, snow and wind; a

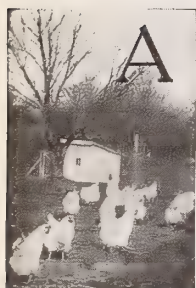

dry dust bath, good scratching pens, thorough and systematic feeding, and plenty of fresh water are also essential for maintaining the health of the fowls and affording a bountiful production of eggs.

These are the practical and scientific principles controlling the egg supply, and it is clear that they may readily be applied by many farmers and poultry keepers. If carried out, they insure profits at all seasons of the year, which I affirm from many years of practical experience.

# Laws of Heredity and Other Matters

Outcrossing is Necessary to Preserve Valuable Features of New Race---  
Inbreeding is Always Detrimental

By H. H. Stoddard, Riviera, Texas

RECENT WRITER who enlarges on what he considers beneficial results of close breeding in certain cases, says:

"The fact that self-division is the first form of reproduction and that self-fertilization is the law in both the vegetable and the animal kingdom until a high stage of development through variation is reached and sex becomes necessary as a check on variation shows that inbreeding is not in itself detrimental."

Sex necessary as a "check on variation"! One would think that variation is an evil from which riddance was of an importance warranting a complete physiological transformation of a race. And, lo and behold! After achieving sex through stupendous efforts, variation remains after all, and is stronger than ever. Which tends the most toward variation, a series that runs back for thousands of generations, inheriting only its own line, as in case of self-fertilization, or a series that in a single outcross annexes another line of equal antiquity comprising an additional ancestry of thousands of generations?

Writers on heredity have shown how, going back through one hundred generations or less, a particular person becomes related to all the individuals in an entire nation. Today we may say that every Englishman has the blood of William the Conqueror, Alfred the Great, Mary Queen of Scots, and the whole crowd of their compeers, in his veins, as also the blood of every white slave of Britain with an iron collar riveted around his neck inscribed with his owner's name. This is mathematically certain.

Individuals vary as to the proportions of the gentry blood they possess, owing to the practice of generally marrying within their class, but the occasional exceptions to this practice make the certainty that every modern Englishman has both the noble and ignoble tides of blood commingled in his veins.

The same is, of course, true with the modern Frenchman or German or member of any other nationality in regard to their respective ancestries. It follows that just one marriage, supposing, for instance, the parties to be English and German respectively, may join the influence of the remote ancestry of two great nations and give every individual of the entire multitude of each heredity power in determining character of children of the union, and thus cause variation.

Yet according to the author cited the change from self-fertilization to crossing checked variation instead of promoting it!

Our writer in another matter seems to betray a lack of appreciation of the whole meaning and spirit of evolution where he says: "Inbreeding is not in itself detrimental." For fifty years I have contended that, absolutely, it always is. Going from pure air into fumes of poison in laboratory or shop is "in itself" always "detrimental," whether bad effects are immediately visible or not, for the good effects of pure air are cut off; and inbreeding is in itself always detrimental, because the intrinsic beneficent effects of outcrossings are cut off.

Let us follow up our author's argument. Behold a series of steps and stages in the gradual building of an animal species through long ages, each stage an improvement on its antecedent. What a curious remark when it is said that one of the imperfect stages is "not detrimental." True that as a stepping stone every stage once had its uses and was in its day necessary, however rough, uncouth and misshapen the stone. But to say that resorting to rough blocks in constructing the later parts of a polished structure would not be detrimental because such were once used exclusively is

rank nonsense. The tail of the tadpole was once used exclusively for locomotion, but in time legs were better.

In finding out whether self-fertilization or any form of close breeding is as high in rank as outcrossing is, the fact that although once useful because circumstances admitted nothing else, the incest feature was repudiated and dropped like a hot potato at the earliest period possible, this very fact of itself proclaims its inferiority, and there are other ways of proving its low rank. For instance, nature retained self-fertilization in a certain plant because the construction of the reproductive parts had been so long entangled with the make-up of the whole structure that self-fertilization had to continue; still, in order to prevent running down and running out of species, nature curiously, ingeniously and perseveringly provided for occasional outcrosses to open up the stores of vitality of new multitudes of ancestors to be drawn on. Well, now, in such a case the botanical biologist and experimenter who artificially stops the outcrossing and allows none but self-fertilization, finds a marked deterioration as a result, in a few generations.

The advocate of close breeding must be hard up for ammunition to resort to something that nature has been trying, through geological ages and aeons to get rid of, in favor of something better, and to claim that because the practice was once followed it is now "not detrimental." There are some animals now confined exclusively to dry land which have rudimentary gills, showing that their remote ancestors lived under water. The land dwellers are vastly superior to their distant ancestry, and how absurd it would be to claim that the water dweller's way of breathing would not be detrimental to their descendants.

This author believes that close breeding is "not detrimental" because practiced for ages. His utterances sometimes seem to imply that everything nature has done is good, instead of her works displaying a stupendous mass of imperfections, as is really the case. By this I mean imperfections as compared with later stages of evolution.

The monsters of past geological ages were often uncouth, clumsy, not perfectly adapted to their environment, and physiologically not of an economical structure. The uncouth camel, a survivor of remote ages and only slightly modified since, is an example of the clumsy build of the animals of geologic periods. There was not apparently one ancient animal shaped with the graceful lines and economical build of frame, muscle and nerve of the modern deer, antelope, leopard, or the whole of the modern animal types.

Now, how meaningless would the assertion be that the ungainly geologic forms were "not detrimental" as compared to the more lithe, powerful and economically built modern forms. You might as well say that in the stone age tools and weapons of flint were "not detrimental" when compared with those made of steel. Man used flint for a period of millions of years longer than he has used steel and iron, and for a still longer period his ancestry had no tools but nails or claws, and for a period longer yet had not even these. True it is that in their day, to these numberless billions of beings, flints and clubs and claws were "not detrimental." They just had to have them. Same as the ungainly monsters mentioned had to have their uncouth shape. The principle of fatality necessitated it, for everything that occurs is the fruit of previous occurrences. But the very fact that humanity evolved from the stone age to the steel age in itself proves the latter. And if today an advocate of tools of flint should say that steel users should once in a while take a day off and work with flint tools only, because the fact that they were once used proved that they were "not detrimental," he would be no less reasonable than the writer who proclaims that close breeding once in a while is "not detrimental" because nature permitted it.

ages ago, in the form of self-fertilization, when she had nothing better and by absolute necessity could not have had anything better.

There are some instances where a few doses of the poison of incest have apparently been tolerated by nature when a new and valuable race of domestic animals is made up. But such races are fewer than is popularly thought, and in every instance where they occur, examination proves more in favor of outcrossing than in favor of inbreeding, since in just such cases are revealed some of the grandest results of out-crossing, for in order that an individual could be found strong enough (and sufficiently well balanced, and stored with vitality capable of being transmitted) to be used in the perilous experiment of inbreeding, there had to be in the production of this eminent individual a series of fortunate outcrosses.

Outcrossing and selection (natural or artificial) produced such prodigies as were used at the start, in the few successful instances of inbreeding, to found a new domestic race of animals. Nothing else ever did or ever will. Furthermore, outcrossing and selection soon have to be resorted to in order to preserve the valuable features of the new race.

There is a widespread delusion that inbreeding in itself promotes improvement, that good traits are made still better by it. But inbreeding per se has no power to create any improvement. It can only hold for a while benefits produced by outcrossing and selection. On the other hand, outcrossing per se has power to make improvement, for it at once annexes an additional ancestry as numerous as the drops of the ocean, giving heredity an additional stock of material to draw on.

#### Diversified Farming.

The very able State Commissioner of Agriculture of Texas, who is doing a vast amount of good for farmers, delivered an address in Neufeces county on the advantage of diversified farming. He said, in substance:

"Think of everything used in your families for which you pay money, and then go to work and if possible raise as much of that particular thing as your family can use. Then select one thing to be raised as a money crop." My seat-mate whispered, "Bad doctrine, right up against modern progress." "Yes," I replied; "it is good in a limited way, but easily overdone."

Somebody was talking of the advisability of several sources of income as to not carry all the eggs in one basket, whereupon Carnegie said: "Put 'em all in one basket and then watch the basket." A writer held that the breeder of utility fowls should select for exhibition qualities too, but Mr. Ellis, of Aurora fame, retorted to the effect: "Every minute of my time and every bit of my thinking power are needed on the utility proposition. The exhibition department is a world by itself and needs all a man's abilities to attend to it properly. Every mite of attention I should be giving it would rob utility just that much."

I observed some years ago the doings at the celery gardens in Nebraska, on islands in the Platte river. The growers made celery their sole business. One was telling how fond his folks were of strawberries and how big his bills were for that luxury, when a hearer pointed out how the speaker could grow them on the higher lands of the island not wet enough for celery. "Oh, no," was the reply; "I can get my strawberries faster and cheaper in the celery field."

Over and over again I see people here with the diversification bee in their bonnets working at a great disadvantage putting at a dozen things that should be let severely alone. Raise a few pigs so as not to buy bacon? Oh, yes, you can do it. The pen must be at quite a distance from the house, for obvious reasons, and in tending a few festive swine you take just about ten-fold the time the regular hog raiser takes, and he does the job better, having studied a lot of things about hogs you never will know. You putter at raising a calf to be killed and partly eaten at home and the remainder peddled out among the neighbors. Everything is done at a disadvantage compared with the regular butcher work. And so with other matters. Whatever the farmer's regular crop or particular branch of stock raising is, he needs every particle of time and study on that to do it well, and side lines spell hindrance and loss. This is not the age of diversification of labor. That was a hundred years ago. Much water has run under the bridge since.

A great fever for diversified farming is this year raging over portions of the truck regions of the Southwest. Again the suggestion, "Mistaken souls who dream of heaven." They are to take up strawberries, Jersey cows, hogs and poultry. There are some other things, too, but the four mentioned are the sheet anchors contemplated.

Well, strawberries can be grown, especially if raised under cotton cloth like shade-grown tobacco, but Matagorda county

and some other counties are the natural home of strawberries, and at such localities they should be grown.

As for Jersey cows, the farms being mostly twenty acres, but few cows can be kept, and these mostly by soiling and the silo.

The outfit of team, wagon, mower and rake and shed for some, must be the same as in the case of a regular dairy. The silo implies a special machine for harvesting the crop and another for cutting it, or if the itinerant plant of one man going the rounds with a traction cutter is followed, there are obvious drawbacks. The separator and the hauling of cream to the railroad cost about the same as for a larger dairy.

A great advantage, if the party has five hundred or more laying fowls, is that the "buzzed milk" can be given them, and one of the disadvantages is that only a few people can manage even a small dairy well.

When it comes to the utility poultry proposition it will most certainly be worked out at a disadvantage in ever so many ways. The eggs will in very few instances bring high prices. The farmers often have a good range for their fowls, a very important advantage, and this is the only good thing to be said about farm poultry keeping, for, considering its relation to an extremely important article of food, it is the most deplorable and outrageous department of industry in the United States. What would be said of producing meat, butter, wool, fruit, grain, garden truck or anything under the sun with the disqualification that, broadly speaking, a great army of producers should be irrevocably sentenced to produce only a third-rate article and receive a third-rate price? Yet this is the fix exactly that the great bulk of farm eggs are in, and there they will be next year, and one hundred years from now.

It makes me tired to hear the everlasting glorification of "farm poultry." True enough it is that a grasshopper forage for nothing is sometimes a set-off against a poor grade of eggs at a beggarly price, but who under heaven can get up much enthusiasm in advocating production of a miserable grade of food?

Of course, associative or communistic candling and shipping may palliate the despicable branch of the business somewhat, but even then no goods under associative auspices will ever reach the highest quality. The longer I study the clubbing business for farmers, the more I am impressed with the difficulties of carrying it out effectively. The travel involved in reaching headquarters over wide territory is a squandering of labor, and the exposure to heat and jar is inevitable. A strictly poultry community, the egg farms adjoining continuously, is much better than scattered farms for associative methods, but even such auspices cannot compare with the large independent egg farm, the producer and the consumer face to face and the personal element governing. Class 1, as described elsewhere in this issue, is the highest type of egg production and will remain so while grass grows and water runs.

#### "Mongrels."

The following paragraph is now going the rounds of the agricultural papers, and many a reader stiffens his spine and becomes stuck on himself as knowing something now:

In 1906 the West Virginia Experiment Station made a series of experiments that tell a tale worth remembering. Fifty White Leghorns were compared with 50 mongrels for one year as to cost of food and egg production, ordinary care and attention being given them, such as they would receive on the average farm. In addition to skim milk used to moisten the mash, the Leghorns consumed 61 pounds of food, costing 85.3 cents, and the mongrels consumed 66.8 pounds of the same material, costing 92.1 cents. During the year the Leghorns average 116.5 eggs, worth \$2.24 per hen, and the mongrels 96.1 eggs, worth \$1.78 per hen. The Leghorns gave a profit over the cost of food of \$1.39 per head, and the mongrels a profit of 86 cents. The Leghorns gained in weight one pound per head more than the mongrels. The highest prices for fresh eggs usually prevail during the months of November, December, January and February. During these four months the mongrels laid only 364 eggs and the Leghorns 1,029, or practically three times as many."

The above is a good sample of the wise things that unsophisticated readers tie to because they are found in their farm papers.

One trial of the sort proves nothing. But on the hint conveyed people will rush to buy stock and pay big prices for anything and everything, so long as it is "pure bred."

By trying another lot of Leghorns, 150 or more eggs per head might have been secured, and a different flock of mongrels would possibly have yielded only 80 eggs apiece, or less.

There are, say, 997 sorts of Leghorns in the country as

regards laying qualities, and, say, 978 kinds of mongrels. More depends on strain than on breed.

We know of no well-guarded, scientific, thorough experiments ever yet made that determined the average laying powers of mongrel fowls compared with pure breeds, or of various pure breeds compared with each other.

"Mongrel" means "not pure." Mongrel fowls generally nowadays have blood of one or more pure breeds in their make-up. The matings may have been so diverse as to lead to a very scraggly, long-legged mixture. On the other hand, the outcrossing sometimes produces some of the best utility birds that ever stood on two legs; vigorous, symmetrical, and yielding eggs high up in hatch ability and immunity from such diseases as may be passing around the neighborhood.

The trouble with mongrel stock is that nine times out of ten no selection of breeding birds is practiced, and good and

bad having been bred from indiscriminately, there are generally many weedy looking specimens.

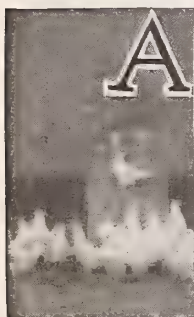

The remark applies to pure bred stock also. You can go to many and many a farm where the old mongrel fowls have been cleaned out, yet the absolutely "pure" birds found there are good for nothing, either for exhibition or utility.

Also, you can find farms (provided you search long enough) where there are mongrels that excel average pure breeds, because bred for years by selection of the best.

The word mongrel should not necessarily convey reproach; for quite a number of the so-called pure breeds such as the Rhode Island Reds, Plymouth Rocks, Wyandottes and so on are really mongrels. Neither should the term pure bred be held to necessarily mean superlatively fine, for again and again there are found pure strains completely "run to seed" and utterly incapable of earning their keep.

## National Egg-Laying Contest for June

Pens Nearly All Filled for Next Contest, to Begin Dec. 1st—American Hens Hold the Highest Individual Record to Date—An English Pen Still Leads by 259 Eggs

AT LEAST three American hens and three British hens are in a close race to be the first to reach the 200-egg mark in the first eight months of the National Egg-Laying Contest at Mountain Grove, Mo. An American hen only has ten eggs to lay in fifteen days to make a record of 200 eggs in eight months. All these hens have made a better record so far than Lady Showyou had made at this time last year. The leading pen record thus far this year is about 200 eggs ahead of the leading pen record at this time last year. The English pen of S. C. White Leghorns is 259 eggs in the lead of its nearest competitor. Two of the

hens in this pen did not lay an egg in June, and if this continues some of the other pens may yet easily overtake them.

June is a scorcher in Missouri. Several deaths were reported in different sections of the state as a result of the heat. It was, of course, also hard on the hens. We had 133 broody contest hens in broody coops at one time this month. Thirty-eight were put up one day and twenty-five another, and such a large per cent being broody at once cut down our egg yield for June. Other contests which had nearly 50 per cent of their pens composed of Leghorns had less broody hens, of course, and made a little higher average for June than we did. Our total yield for June was over 10,411 eggs, and the grand total to date is 70,386 eggs. The Leghorns in the North American contest at Storrs, Conn., had made about the same average up to June 1 as had the Leghorns in the Missouri contest. The larger breeds in Missouri had made little higher averages than the same breeds in Connecticut, as a rule. At the present time the records are very nearly the same, on the average.

The twelve highest pen records to July 1, being the record of ten hens or pullets for the previous seven months and a half, are as follows:

Pen No. 2—S. C. White Leghorns (England).....	1,529 eggs
Pen No. 19—Silver Wyandotte (Iowa).....	1,270 eggs
Pen No. 57—Black Langshan (Missouri).....	1,248 eggs
Pen No. 20—White Wyandotte (Arkansas).....	1,222 eggs
Pen No. 30—Buff Wyandotte (Vermont).....	1,212 eggs
Pen No. 33—Barred Rocks (Illinois).....	1,192 eggs
Pen No. 11—Black Minorcas (Iowa).....	1,190 eggs
Pen No. 26—Buff Wyandotte (Missouri).....	1,192 eggs
Pen No. 8—S. C. White Leghorns (California)....	1,185 eggs
Pen No. 23—Silver Wyandotte (Illinois).....	1,182 eggs
Pen No. 59—Black Minorcas (Missouri).....	1,177 eggs
Pen No. 9—S. C. Brown Leghorns (Missouri)....	1,180 eggs

A thing which is worthy of our consideration is the fact that pen No. 11, Black Minorcas from Iowa, is a pen which was entered in the last year's contest and made a very poor record. The owner was not discouraged and entered the same hens again this year. More than half of them are two-year-old hens and they were among the leading pens last month, and tied a pen of Anconas from Missouri for the silver cup for June, each pen laying 212 eggs. A pen of White Leghorns from California also went into the ranks of the first twelve pens and others moved up the list, as will be seen by comparing last month's report and this. The hens and pens which continue to lay a reasonable number of eggs during the hot weather are going to be the hens and pens which win.

The twelve highest pen records for June are as follows:	
Pen No. 1—Anconas (Missouri).....	212 eggs
Pen No. 11—Black Minorcas (Iowa).....	212 eggs
Pen No. 10—R. C. White Leghorns (Missouri).....	210 eggs
Pen No. 17—Black Minorcas (New York).....	199 eggs
Pen No. 8—S. C. White Leghorns (California)....	196 eggs
Pen No. 18—S. C. Buff Leghorns (Missouri).....	194 eggs
Pen No. 2—S. C. White Leghorns (England).....	191 eggs
Pen No. 26—Buff Wyandottes (Missouri).....	184 eggs
Pen No. 5—Black Minorcas (Missouri).....	181 eggs
Pen No. 20—White Wyandottes (Arkansas).....	178 eggs
Pen No. 7—Anconas (Oregon).....	178 eggs
Pen No. 14—S. C. White Leghorns (Pennsylvania)...	176 eggs

The twelve highest individual records made thus far are as follows:

Hen No. 860—Buff Wyandotte (Vermont).....	190 eggs
Hen No. 66—S. C. White Leghorn (England).....	187 eggs
Hen No. 100—Buff Wyandotte (Missouri).....	184 eggs
Hen No. 62—S. C. White Leghorn (England).....	179 eggs
Hen No. 61—S. C. White Leghorn (England).....	178 eggs
Hen No. 65—S. C. White Leghorn (England).....	175 eggs
Hen No. 735—Black Langshan (Missouri).....	171 eggs
Hen No. 67—S. C. White Leghorn (England).....	167 eggs
Hen No. 516—Buff Wyandotte (Missouri).....	165 eggs
Hen No. 55—R. C. White Leghorn (Missouri).....	165 eggs
Hen No. 77—Ancona (Missouri).....	164 eggs
Hen No. 72—Ancona (Missouri).....	162 eggs

### Entries Coming In for Third Contest.

About two-thirds of the pens for the third annual contest, which begins December 1, have already been entered. This promises to be the greatest laying contest ever held in this or any other country. We have promises of pens from the United States, Canada, England and Australia. Our rules are liberal, the premiums large, the entry fee small, and the contest will be held under the auspices of a state institution—the Missouri State Poultry Experiment Station. No breeder's name need appear on the pen or in the reports unless he wants it to appear. The best breeders in Missouri and America should have a pen trap-vested and have their stock pedigreed. You will have to hurry, as we can only accommodate sixty pens. We will also try out ducks again in the next contest.

The pen which has feed of all kinds before it where the hens can help themselves dropped from first place last month to sixth place this month. They made a good record all during the winter and spring, and surpassed all other pens. This would indicate that hens may do well where fed this way in winter, but it is not a good method of feeding hens in hot weather. The pen which gets nothing but corn, wheat and ground oats and nothing to drink but buttermilk has now passed to first place.

### Pen No. 67 Fed by Automatic Feeders.

This pen gets exactly the same feed and treatment that our regular contest pens receive. The only difference is that the grain is fed night and morning by hand to the pens in the contest, and this pen in the feeding test supply themselves with grain by working it out of an automatic feeder and exerciser. This pen is in second place, and this would indicate that this is not a bad method. The Connecticut contest uses these same feeders exclusively in their contest and no grain is hand-fed. This method may prove to be a great labor-saver.

# Womans Success With Poultry

Helen T. Woods, Editor

A Department for the Exchange of Helpful Poultry Experiences

## OPEN FRONT HOUSES FOR CALIFORNIA

By John Y. Beaty, Santa Rosa, Cal.

IT SEEMS STRANGE that in this land of sunshine so few open-front houses are used. The average poultry raiser uses a small house with little ventilation.

There are a few, however, who are progressive in their housing ideas and who have attained splendid success with the open-front type. Notable among these is Mrs. A. I. Cruzon, of Sonoma county—a woman of sixty, who attends to the work herself on a ranch carrying nearly a thousand layers.

Mrs. Cruzon's success is probably not due entirely to the use of the open-front house, but the open-front house has done for her what it has done for so many other raisers that have used it—it has kept her flock vigorous and in perfect health. And when a flock is vigorous and in perfect health it is almost sure to be a profitable flock.

The front of the Cruzon house is entirely open except for three feet up from the ground. This boarding is used to avoid drafts on the fowls while they are scratching in the litter. The house is 100 feet long and is divided into three compartments—two for the birds, and one for the feed.

The roosts are arranged along the side opposite from the open front, and the dropping boards are so arranged that they may be cleaned by use of a litter carrier. The track is attached to the front of the dropping board, and on this the car is run. In cleaning, a big hoe is used, and all that is done is to scrape the droppings over the edge. When the car is filled, it is run out of one end of the house and its contents dumped onto a stone boat, which is used for hauling the manure onto the fields.

The picture shows the arrangement for watering used in

California Open-front House patterned after the style used in the East

Mrs. Cruzon's house. The water trough is a section of eave-spouting like that used on houses. This is attached just outside of the wall, and slats are put in front of it. The chickens reach from the inside through these slats to get their drink. The water drips into these troughs from a small cock continually. Water is supplied from an elevated tank that is filled by a gasoline engine.

The houses on the ranch of Grant Helman, of the Petaluma poultry district, are patterned after the open-front houses in the East. The building is one big scratching shed, and at the back the roosting chamber is arranged so that it may be inclosed entirely on cold nights. But we don't have cold

nights in California, at least not cold enough to require closing the front of the roosting compartment.

The self-feeders are on the ends of the houses and the nest boxes are under the dropping boards. These houses face the south—contrary to the common custom in California. All of our severe storms come from the south, and so the average man has faced his house to the north to avoid these. Mr. Helman has observed, however, that for every week of storm there are ten weeks of sunshine, and he wants the sunshine together with the fresh air for his fowls. He has protected against the storms by a hood on the front of the roof. This has been effective.

So enthusiastic is Mr. Helman over the open-front houses

Open-front House showing arrangement for watering, used by Mrs. A. J. Cruzon, a California woman poultry raiser

that he has stated that he could raise better chickens and produce more eggs with his eyes shut if he had an open-front house than he could with the best of care in a closed house.

California needs more open-front houses. Closed houses are certainly unnecessary in our climate, and when you shut your chickens up in a small building, with little or no ventilation, you are reducing their vigor and lessening the possibility of a good egg yield.

## THE MIGHTY AND DEADLY MITE

*Dermanyssus Galinæ*, the scientists call him, but to us he is just the "pesky red mite." He is red, by the way, only when he is full of blood. The rest of the time he is gray with black spots.

### Facts and Rules Which You Should Observe.

1. Red mites multiply most readily during warm weather and in dark, damp, filthy houses.
2. Avoid all the hiding places possible. Change nest material often. Don't allow any decayed or broken eggs to remain in the nests.
3. When a house is once infested, very thorough treatment is required in order to get rid of them.
4. Any one of three methods may be used: (a) white-washing and painting with kerosene and crude carbolic acid; (b) fumigating with sulphur and painting with cresol emulsion; (c) spraying with lime-sulphur solution.
5. To prevent mites, keep the house clean and paint the roosts and interior of nests every two weeks with kerosene and crude carbolic acid. Remember that there is no reasonable excuse for a house being infested with mites. If the house is kept clean, sanitary and properly sprayed they will never appear. A "mitey" hen house is always a sign of a careless poultryman. Resolve today never to let that sign be found on your premises.—T. E. Quisenberry.

# EDITORIAL

## WE LEAD OTHERS FOLLOW

60,000 A. P. J.'s FOR AUGUST, 1913.

State of Illinois, County of Cook, ss.:  
G. M. Atwell, president of the Atwell  
Printing House, Chicago, being duly  
sworn, certifies that the American Poultry  
Journal has contracted for printing  
and binding sixty thousand copies of  
the August, 1913, issue.

G. M. ATWELL,  
Subscribed and sworn to before me this  
17th day of July, 1913.

(Seal) HENRY G. EISERT,  
Notary Public.

### OUR GUARANTEE.

We guarantee our subscribers against  
loss due to fraudulent misrepresentation  
in any display advertisement appearing in  
the American Poultry Journal, providing  
the subscriber when ordering the fowls  
or merchandise states that the advertise-  
ment was seen in the American Poultry  
Journal, and places the order during the  
month or months in which the ad is in-  
serted in our columns and notifies us  
of the fraudulent misrepresentation of the  
advertiser, giving full particulars, as soon  
as it occurs.

### Our New "Year Book for 1913"

We take pleasure in announcing to our  
readers that the "American Poultry Jour-  
nal Year Book for 1913" is having a  
large sale and we are receiving by almost  
every mail complimentary letters prasing the  
book that are very pleasing to us.

This is the first attempt to publish a book  
of this character in this country devoted  
exclusively to poultry culture and we spared  
no expense in trying to make it a worthy  
representative of our great billion dollar  
poultry industry.

On the back inside cover of this month's  
Journal will be found an interesting adver-  
tisement regarding the "Year Book," which  
tells how this great big book may be ob-  
tained absolutely free with express charges  
prepaid. We would like to request every  
reader of A. P. J. to read this ad carefully  
and profit by its liberal offer.

### Atlantic City Meeting.

Secretary Campbell writes that he be-  
lieves the thirty-eighth annual meeting  
of the American Poultry Association at  
Atlantic City, N. J., August 11 to 16,  
will be the most largely attended as  
well as the most important meeting  
ever held by any live stock organiza-  
tion. Preparations are being made to  
entertain not less than five hundred,  
and it is hoped that the members and  
their families who attend will exceed  
that number. All who attend will be  
made welcome.

Those who intend to be at Atlantic  
City convention week and who have not  
already made hotel reservations would  
do well to write at once for accommo-  
dations to be reserved for them, as the  
second week in August is a very popu-

3 years, \$2.00.  
10 cents a copy of all newsdealers.  
Canada, 1 year, \$1.25; 3 years, \$2.75.  
Foreign, 1 year, \$1.50; 3 years, \$3.50.

Look at the address on your wrapper.  
See that it is absolutely correct and no-  
tify us of any mistake, no matter how  
slight. Note the expiration date which  
appears thereon, as American Poultry  
Journal stops with the issue marked on  
your wrapper.

If you change your address give both  
your old and new address as well as your  
subscription number when notifying us of  
the change.

AMERICAN POULTRY JOURNAL is  
the oldest poultry paper in America. It  
has a national and world-wide reputation.  
The best writers on poultry matters con-  
tribute to its columns. It receives the  
patronage and endorsement of the fore-  
most representative breeders of standard  
poultry and manufacturers of poultry ap-  
pliances in the country.

### "So Wags the World."

Lives of men sometimes remind us  
Change of mind is often wide  
And the wily politician  
Shapes his courses with the tide.

Recent editorial controversies and the  
A. P. A. election have a certain humor-  
ous side to help dispel the monotony of  
the constantly recurring "You're  
another!" We are reminded that the  
wily politician is prompt to clamber  
into the band wagon with the winner  
after the returns are all in. Still, after  
"lo, these many years" of loving ex-  
change of compliments it is amusing to  
find Grant M. Curtis editorially en-  
dorsing John H. Robinson. Extended  
comment is unnecessary, though the fol-  
lowing quotations may furnish mid-  
summer amusement:

"A St. Louis daily paper reported  
that in this brief but 'warmish' discus-  
sion we pulled John H. Robinson's  
whiskers. That is not true. We did  
take hold of his necktie and shirt in  
what may have been regarded as an un-  
friendly manner, and we did tell him  
to keep his whiskers out of harm's  
way or we would pull them as an in-  
dication of our personal contempt for  
him as an editor who month after  
month writes and publishes alleged  
rumor, idle hearsay and vicious insin-  
uations that are well calculated to injure  
the reputations of other men—of men  
who for years have worked faithfully  
in the interests of the American Poultry  
Association. We are frank to state  
further that we used somewhat stronger  
terms than these, so that there might  
be no mistake on Mr. Robinson's part  
in understanding what we meant. We  
had no intention of striking the fellow.  
Our feeling was one of contempt, not  
anger." (Editor Curtis in September,  
1910, R. P. J.)

"Evidently we do not hold the same  
high opinion of Mr. Robinson's charac-  
ter and mentality that Mr. Rigg does.

This can readily be the case. As for his character, based on an analysis of his writing during the last four or five years, as directed against the editor of R. P. J., we should not want to express an opinion—not for publication. As for 'the brains on the shelf,' we are frank to say that we would not pay \$15 a week for any work Editor Robinson has ever done, so far as it has come under our notice." (Editor Curtis in August, 1911, R. P. J.)

Mr. Robinson's only reply to the above was to reprint the paragraph under the heading, "Sour Grapes." Now gaze on this and note how values sometimes go up:

"There is another way in which Editor Robinson can be of service to A. P. A. and the general poultry industry in the near future. At Nashville last August a resolution was adopted which provides for the preparation and publication of an A. P. A. text-book to be used for teaching elementary poultry culture in the public schools. The poultry instructor who introduced this resolution did not express a wish to prepare the text and to decide on the illustrations for the book, and we have been told since that he does not care to do the actual work.

"Mr. Robinson has written a number of books similar in kind and purpose, although of a more elaborate character, and we are sincere in saying that we do not know of a man in the association who is better qualified to handle this important and none too easy task. In our best judgment it is time that the foremost critics of the association were put to work and given all the chance in the world to show what they can do in behalf of the organization. We do not know of a better way to keep them profitably employed and to stop their 'knocking.'" (Editor Curtis in June, 1913, A. P. W.)

"And there ye are," as John Barty would say. Wonder if the next "news from the front" will inform us that Editor Robinson has resigned from Farm-Poultry to accept a job in Buffalo at "\$15 a week" plus a few good things on the side? "So wags the world."

### Egg Records.

That famous and most subtle statesman, Disraeli, once remarked that there are three sorts of lies—"lies, damned lies, and statistics."

When we read some of the wonderful records of egg production of large flocks that are reported from time to time we are forcibly reminded of Disraeli's saying. Statistics or compilation of reports and records, especially of partial or incomplete egg records, are very liable to result in the drawing of false deductions.

We know that there are 200-egg hens and that even 250-egg hens are not such very rare birds. But the biggest producers are freaks, phenomenal specimens that stand out from the rank and file. Some poultry keepers keep very careful records of the complete year's work of some special members of their flocks, but seldom are these records kept so that there is not ample opportunity for errors to creep in. More people keep only partial records, memoranda of the performance of their birds individually, for one, two or three months, and generally not the months of low production. One good friend of ours, who has been breeding poultry for at

least fifty years, is very fond of telling about some of his 250-egggers, and we are quite positive that he never kept the record of even one hen for an entire year, and know he hasn't a trap-nest on the place. When we asked for data concerning one of his favorite producers he admitted that he had kept her up for a month with birds that laid different colored eggs and that she had produced 26 eggs that month and he was sure from that that she would produce better than 250 eggs in a year.

We don't pretend to know what the average production of good flocks really is the country over. We do know that there are many flocks where the hens will not average ten dozen eggs each in a year, and that, where large numbers are kept, flocks that will average twelve dozen eggs per hen a year are mighty good flocks and a paying proposition. When a man claims a flock of 1,000 hens or more, every one of which has a record of not less than 175 eggs a year, and many are 200-egggers, you can figure that he is drawing a pretty long bow and doing some tall guesswork. Could proof of such performance be had we would travel many miles to see such a flock and to have the privilege of examining the records.

There are 250-egg hens, and some even better, and 200-egg hens, and there are also 80-egg hens and hens that don't produce even a dozen eggs in 365 days. The 144-egg hen is a mighty comfortable bit of property to have on the place, and we would like to have 2,000 of her and none worse layers.

Notwithstanding the above comment, we are always glad to have big records of busy biddy when the same appear to be authentic, as we have no doubt a good many reports are.

There is good reason to assume that the records of the National Egg-Laying Contest at Mountain Grove, Mo., were carefully and conscientiously kept. There were 655 selected layers in this contest and the average yield for the year was 134 eggs per hen. Forty-nine hens out of the entire lot laid 200 eggs each, or better. The best record was made by a White Plymouth Rock yielding the remarkable total of 281 eggs. The next best yield was made by a R. C. Rhode Island Red—255 eggs. A Barred Rock came next with 245 eggs, an Ancona fourth with 241 eggs, and a S. C. Red fifth with 236 eggs.

The best record of which we have any authentic report for America is reported by Prof. Graham, of Guelph, Canada, and gives a yield of 282 eggs in twelve months for a Barred Plymouth Rock hen. In the International contest at Storrs, Conn., the highest record was made by a Rhode Island Red which laid 254 eggs. In this contest the average yield per hen for the year was 152 eggs.

Oregon Agricultural College is generally conservative in its reports and gives the following remarkable performance of a mongrel hen in its bulletin for June:

"Evidently being a cross-bred hen does not interfere with the laying proclivities of a member of the flock at the Oregon Agricultural College. She made a record of 99 eggs in 100 days, laid off one day for the commencement exercises, and then began again and kept right on to date. She has been laying steadily and persistently all winter, too, and shows what may be accomplished in increasing egg yield by

proper selective breeding, as she has several generations of good layers in her pedigree."

### Dogday Doggerel.

Through all this sultry, humid heat  
I've read page on page of editor's bleat  
In many a magazine.

Through controversies wild I've read,  
Cussed brainstorm in the editor's  
head,  
And his mangy bombazine.

Why spoil the quill, waste berry juice  
On columns full of wild abuse  
On days so hot?

Much might be said of July's score,  
Taunts might be writ, and jabs galore,  
But I will not!

Of course we know that it is wise  
To use much ink and advertise—  
Get talked about!

But maybe readers want an innin'  
And tired get of dirty linen.  
Just hear me shout!

Let the peace dove a-homing come—  
What if the fellow's going some  
With bluff and excuse?

'Tis time to play to beat the band;  
Your old opponent don't lack sand.  
So what's the use? —P. T. W.

### Back to the Farm.

There is no end to the city dwellers who want to get back to the farm and wrest a living from the unwilling soil. It's a laudable ambition. The army of back-to-the-farm wishers is only partly met by the army of country boys and girls who want to make fortunes in the big city.

The country is a good place to live; it is usually a healthful place, but it sometimes is a bit short on congenial neighbors who have a common bond in thought and interest. In many localities supplies are difficult to obtain, and many country schools are a disgrace to the nation. Even in states which pride themselves on their public schools there are many country schoolhouses that in management and in sanitary arrangements, and in conditions of morality, would be a disgrace to the worst farm pigsty. That is a pitiable fact, but it is none the less true. Our government spends millions to promote crop-growing and stock-growing along scientific and sanitary lines, but it doesn't pay much attention to the proper growing of the crop of children that are to people this great country in the days to come.

Yet we prefer the country, even the "wayback" country, to live in, even though we have to send our youngsters miles to a private school, or else keep a governess, because the local nearby schools are too rotten. It is a fine thing to get out in the country and live next to nature, to breathe good air and have plenty of room.

It is, however, easy for any ambitious man living in the country to get tangled up with more work than he can do. He is prone to "bite off more than he can chew." There are thousands of ways where time can be puttered away. Too great diversification in farm pursuits will soon lead to a great expenditure of time with mighty slim returns and an increase in the "high cost of living." When we landed back on the farm we wanted to do many things and attempted a good many. It took us the greater part of two years to find out

that the editorial work of this magazine comes pretty near being a full-sized man's job, and that while we might and could enjoy living on a farm, we had mighty little time for farm pursuits and that it cost a lot less to buy some things than it does to grow them when you haven't the time to spare from other more important things. While a man on a back country farm must of necessity be able to do many things and to do them fairly well, it doesn't pay to be a "Jack of all trades," nor does "all work and no play" pay in the long run. Hereafter we intend to bite off less and devote more time to chewing.

Mr. Stoddard gets right down to brass tacks in his talk on diversified farming. We believe that he is right and that it is very easy to get too many things started and too few well finished. Most men can do one thing well, very few men can do many things well. What we need on our farms is not a little trucking, a little live stock business, a bit of poultry keeping, and a little more of this and that—what we need is more specialization. Let each man specialize in the branch, or at most few allied branches, at which he can do the best work, and let the other fellow do what he also is best fitted for. We need specialization, not diversification.

We get letters very often from young men who want to go on a farm and learn poultry keeping. They want to be taught the business and they expect to be paid a salary while being taught. Even when a young man goes on a plant to observe and learn and gets his board (generally more than he is worth) he feels he ought to get better paid. As soon as he begins to master a few details and gives promise of being worth promotion to more pay than his keep, he gets a swelled head, thinks he knows more than his instructor, or any one else, does about the business, and quits the farm to go into business for himself. The instructor is left in the lurch, with no alternative but to begin breaking in another man. We tried it

and we do not enthuse over repeating the experience. Other labor is not plentiful. Good, trustworthy men, at salaries they can earn and show a profit on, are a very scarce article. Most of the best men we have tried are drifters and never stay long in one place. We haven't solved our labor problem and we intend to give the subject considerable time before we experiment further. Just for the present summer we are going to try to be content to live on our home farm and let the farm take care of itself while we devote our time to our own special work.

One of the best things we have read lately on the "back-to-the-farm movement" is the following editorial from the July 12th Saturday Evening Post. It applies equally well to would-be poultry farmers. The advice is good. Read it and think it over.

#### "That Farm You Want."

"A great many city men who had little or no practical experience in farming before they tried it are succeeding at it. A great many others are failing. Others, more numerous than both these classes combined, are honing to make the venture. For them here is a simple recipe:

"Take the price of a farm in the rural district you have selected and carefully deposit it in a sound bank at the best interest you can get for six months. If possible find an up-to-date, progressive farmer and hire yourself to him for the summer. Probably he will entertain so low an idea of your value as a farmhand that he will not even give you board for your labor; but, if you have no practical experience in farming and propose to make that your business, you can afford to pay him board and work a few months for nothing.

"In the course of the summer you will discover many valuable things—as that following a furrow in loose dirt all day affects the feet in a way quite different from walking on a pavement,

that the eighty you were on the point of buying because the view from the front porch is so lovely runs back into a sour, cold clay which resists all known methods of cultivation in a wet season.

"You will also discover that poor farmers work like galley slaves if they keep their heads above water at all, though good farmers work no more than a healthy man should; in fact, the best farmer we happen to know frankly confesses that he has not done a lick of hard work in ten years. But he knows how every bit of work on his farm ought to be done and personally sees that it is done that way—which would be out of the question if he had not had practical experience.

"At the end of a summer on the farm you will know what to buy and what to do with it afterward. If your progressive farmer will not let you work for him on any terms, at least sit on the fences a while, get acquainted with real farmers, and learn the locality before you buy."

#### Chicken Thieves.

The skunk or polecat is a natural-born chicken thief. So is the hawk, and so are some other furred and feathered animals. They don't know any better and nature taught them to get their food in that way. We shoot such thieves when we can.

Of the few things in this world meaner than the skunk is that meanest of all polecats—the chicken thief of the genus homo. This human polecat is not deserving of any consideration as a rule, yet our courts deal lightly with him and make chicken-thieving, for the most part, a petty offense. Some few may steal chickens for food, some steal them to sell as a source of easy money, but most of such thieves steal chickens as an easy means of securing enough money to buy booze. It is high time that such thieves were severely dealt with.

When we first came to live in Plymouth county, Massachusetts, we had our first experience with chicken thieves. During the first few months we lost several hundred dollars' worth of chickens, fowls and other property. We could get no protection from either town or state. We did not get any relief from this trouble until we bought a dog with a reputation for being savage, and also began to make a practice of shooting at night whenever we heard a disturbance about the poultry houses. The town made us chain the dog and the police warned us that we might get into serious trouble if we continued shooting, even if we only fired in the air. Nevertheless, since we could get no protection from the law

## MARTIN'S REGAL SUMMER SALE

In order to make room for my large flock of rapidly growing chicks, I am offering for sale, 400 selected breeders at very low prices. Send for free sale list, giving description and prices, also 20-page catalogue. Eggs from prize matings, \$2.50 per 15, \$12 per 100. As usual Regal White Wyandotte Chicks will be winners at the early shows. Will have matured cockerels and pullets by September 1st. Book orders early.

JOHN S. MARTIN BOX 51 PORT DOVER, CANADA

## SPECIAL SALE OF

# SILVER CAMPINES

We offer at extraordinary prices over one hundred hens and cocks—Silver Campines imported by Capt. DeBathe of England, especially for this special Fall sale. These birds were selected by the Captain with a view of giving his U. S. friends the improved English type Campines, believing that the advertisement thus obtained will be of great value in the future; hence the very low price of \$4 for the hens and \$5 for the males. Order Quick—Send money with order and we will make best possible selection. First come, first served. A few Indian Runner Ducks from prize winning pens. One thousand laying S. C. White Leghorns, Rockland Strain, including many daughters from that wonderful cock, Rockland I. Must have room for young stock. Mention American Poultry Journal when writing.

THE DICTOGRAPH FARM  
AFTER THIS SEASON

; RIDGE EGG FARM, R. 2, WEST NYACK, N. Y.

and could not stand the frequent raids on our property, we had to continue to exercise our judgment in protecting our home and property to the best of our ability. We set traps in our poultry houses and it became noised about that there was danger of being shot if prowling about our place at night. That was the only thing that saved our poultry.

Neighbors lost poultry frequently, and one poor man, who depended almost wholly on his income from poultry, lost his entire flock of some 500 marketable roasters in one night. We have yet to learn of any action of the authorities that has benefited such poultry keepers.

Yet shooting is dangerous practice and liable to lead to serious results, particularly if a man shoots while under excitement and when just aroused from his bed. The case of David D. Farnsworth, of Bridgewater, Mass., brings this forcibly to mind. Mr. Farnsworth has been a resident of Massachusetts only about two years. He had a small poultry farm and was a contributor to the poultry press. He had lost one leg at the hip joint and therefore was not well equipped to cope with thieves in the night. His plant had been visited several times and many valuable fowls stolen. One night he and his good wife were awakened by a commotion in the poultry house. They turned out in their night clothes and Mr. Farnsworth fired a gun several times in the air, as he believed, to frighten the thieves. Next morning an alleged chicken thief was found dead near his home and there was every indication that the man's friends had aided him to get through the fence and off the farm. He was reputed a "bad lot." Nevertheless, the majesty of the law was visited upon the Farnsworth home and Mr. Farnsworth was finally sentenced to six months imprisonment for manslaughter. The state did not protect him or his property, or his family, neither did the town, and the law found it necessary to punish him for endeavoring to protect himself, although it appeared to observers that it was quite clear that he fired to frighten thieves, or worse, from his home, and the killing was accidental.

It isn't safe in these days for a man to attempt to protect himself and his home; the law doesn't protect him, and even when he protects himself in what he believes to be self-defense, he is in danger of suffering severely for it unless he is prepared for the occasion with an abundance of witnesses. The law will punish him promptly if he shoots the invader in his home, but it won't, or don't, help him to keep out thieves and burglars. We are expected to permit ourselves to be robbed and to smilingly ask to have it done again. Isn't it about time that the penalty for chicken stealing was made more severe and that something was done to put a stop to it?

We are glad to be able to state that, through the efforts of his wife and his friends, Mr. Farnsworth only served a small part of his sentence. We do not

believe he should have ever been sentenced; but that can't be helped now. On July 9th a petition was presented to the governor of Massachusetts and council, and the vote for pardon was unanimous, neither the judge who imposed sentence nor the district attorney offering any opposition to the pardon. Mrs. Farnsworth hurried to Plymouth with the pardon, and that afternoon the happy pair returned together to their little farm. We understand that the farm is to be sold and that Mr. Farnsworth is to return to Chicago to continue in the employ of the railroad with which he was associated before he came to Massachusetts on an extended leave of absence.

Our sincere congratulations are extended to Mr. and Mrs. Farnsworth on the successful and happy outcome of what at first appeared to be another dark blot on the legal records of the old Bay State. We shall be sorry to have them leave New England, but we wish them long life, happiness and prosperity wherever they make their home.

O. L. McCord, Danville, Ill., the present election commissioner of the American Poultry Association, informs us that he will be a candidate for reelection to this very important office. In our opinion, the members of the American Poultry Association who attend the annual convention at Atlantic City this month should by unanimous vote re-elect Mr. McCord to this office, and should also extend to him a vote of thanks for the careful, prompt and efficient manner in which he has done his work in the past.

#### DR. WOODS' NOTES AND COMMENT.

Atlantic City Aug. 11th to 16th.

What are the wild waves saying  
Down on Jersey's sandy shore?  
Better sure attend that meeting,  
Old friends and fanciers greeting,  
Though you've never gone before.

Atlantic City by the old ocean,  
August, the second week,  
Time and place you should remember,  
Even though you're not a member,  
Come along, 'tis YOU we seek.

There's no "midway" like the Boardwalk,  
For amusements and strange sights,  
Promenade so long and wide,  
"Twixt the busy shore and tide,  
Something doing days and nights.

Shake off business for the present,  
Take some playtime, you need more,  
Pack your grip for a vacation,  
Hustle off now to the station,  
Meet us down on Jersey shore.

could. There's more fun with him in.

Now that for one issue of the publication they write for Messrs. Rigg and Orr have cut out the "my dear Gaston" and "my dear Alphonse" up-stage advertising business, it is to be hoped that they will continue to mend their ways and after a while give us some really useful poultry talk from their abundant practical experience. Here's hopin'.

The following from experience of Thomas F. Rigg in R. P. J. is interesting to rural poultry keepers: "We are still having trouble with the blue jays. Last week they killed eighteen young chicks. As previously stated,

they pick the chick on the head until it is dead. They do not eat the chicks. They kill them for the delight of slaughter. Under the Iowa law, the blue jay is an outlaw and can be legally killed. We have been busy during the past few days."

We have found blue jays a few times in enclosed chicken runs, but they do not seem particularly troublesome in Massachusetts. On our home place there are a good many kingbirds (bee martins) and these prove a great help in keeping hawks and jays away from the open fields and orchard. The kingbird is a great warrior and a protector of the farmer's poultry and pigeons and should be encouraged to nest in the orchard trees. This spring a pair of kingbirds made a nest in the old apple tree near one of our poultry houses and raised four sturdy youngsters. There is one crafty big hawk that we have never been able to get and he has more than once carried off a full grown Rock hen. One morning we heard a great commotion in the air and saw the two parent kingbirds attacking the big hawk high above our poultry yard. It was a great fight for the kingbirds, but the hawk was so at a disadvantage that his only thought seemed to be flight and the two tiny warriors chased him out of sight over the woods. We haven't seen him since and he used to be a regular visitor, but too crafty to be caught.

In July R. P. J. Editor Curtis replies at considerable length to Editor Standish of the Poultry Index. We were somewhat amused to find the following reference to us in the editorial: "Referring briefly to our long-time friend and co-worker, Mr. Woods, it is still a pleasure to us to have him meet us fully half way with a cordial handshake at the Boston and New York poultry shows, which he has never yet failed to do. The Doctor, on a basis of eight years of association, knows that we are no worse than we are—and we trust that the day may never come

when he will feel ashamed to be seen speaking to us in public."

We believe that we can conscientiously say "Amen" to that.

We commented last month on the unfortunate statement Editor Standish made concerning a "Massachusetts advertiser." We think that should be retracted or else a positive statement of the charges set forth. If there is a big advertiser in Massachusetts who is a "notorious fakir and cheat" we don't know who he is and if Editor Standish does and can prove his statement he should do so at once and take the onus off the other advertisers in the Bay State. We have only met Mr. Standish a few times and then only for a few moments and we were favorably impressed with his work and his publication as we had observed it, but as we said in July issue we think he slopped the ink a wee bit in the heat of his indignation and said things he is now probably sorry for. The balance of the controversy isn't worth wasting

# WHITE ORPINGTONS

## Superb Type and

## Superior Quality

### January and February Hatched Youngsters For Sale

Never have I found young chicks to prove more completely the claim made for them regarding TYPE and QUALITY than does my present young stock. It is indeed a remarkable line of cockerels and pullets hatched in January, February and March. As it is possible to detect any minor faults in birds after they are eight weeks old, and to form a pretty fair idea as to how they are likely to develop, I have placed on sale about 600 of the most promising White Orpingtons ever produced—large, vigorous, massive birds raised on acres of blue grass sod.

OLDER STOCK AT BARGAIN PRICES

Due to the fact that I must make room for younger stock, it will be necessary to dispose of a number of HENS and COCKS on the breaking up of my breeding pens. These, of course, must go at attractive prices, and here is an opportunity to get some foundation stock the stamina and vigor of which could only be arrived at through the wonderful blue grass range commanded by Russell Cave Poultry Yards as a branch of the renowned 8,000-acre Elmendorf Farm. High-Class Exhibition Specimens—I am now prepared to condition birds for the early shows. An extra line of Duroc-Jersey young pigs for sale. Russell Cave Poultry Farm Elmendorf Stock Farm Louis Lee Haggin, Prop. R. 3, Box 1025, Lexington, Kentucky

any more ink over, but that stigma should be removed from Massachusetts advertisers and if a guilty party does exist outside the heated imagination of a moment in editorial writing, then he should be shown up for the protection of all poultrymen.

\* \* \*

D. Lincoln Orr, in his July grist, calls attention to hulled oats and states that they "are obtainable most any place and they are not very high in price in comparison with some other grains. They can be bought here in the East at not over \$2.75 per 100. Hulled oats are a good grain to give growing chicks. Less corn and more oats ought to be fed."

\* \* \*

Hulled oats are excellent food, there is no doubt about that. However, unless carefully and sparingly fed they are liable to be wasted and so prove expensive. No more should be given than are cleaned up promptly. It is easy to stall chicks on hulled oats. Personally we prefer good heavy clipped white oats to hulled oats for both chick and fowl feeding. All of the hull is not digested, but part of it is and we believe from experience that oats with the hulls on are better for poultry feeding than oats with the hulls off. Good clipped oats cost us now by the ten bushel lot, \$1.15 for 64 pounds. We would rather have 128 pounds of good oats with hulls on for \$2.30, to feed to growing chicks, than 100 pounds of hulled oats at \$2.75 and we believe we would get much better return for our money in sound chicken flesh, bone and feather. The hulled oat lacks the germ and its valuable food properties. Oat hulls are comparatively rich in mineral matter that is of value as an aid in feather forming as well as for other purposes. The ash or mineral content of the oat hull is about 6.7 per cent. There is also about 3.3 per cent protein, 52.1 per cent carbohydrates, 1 per cent fats and about 29.7 per cent fibre. From post mortems of many chicks we believe that, within reasonable limits, the oat hull fibre helps in the digestion of the oats.

\* \* \*

We have received from Cassell & Company, Ltd., New York City, a copy of their new book, "Poultry Foods and Feeding," a manual for all breeders, by Duncan Forbes Laurie, poultry expert and lecturer to the South Australian Government. The price is \$1, and it should prove well worth it to any poultryman as a library reference book. American poultrymen will find a good many statements in this book to which they will take exception or with which their own personal experience leads them to differ with the author. This is inevitable in a book of this sort and is all the more apparent in this work because the author lacks experience with American poultry feeding methods and has written from the "other side of the herring pond" point of view. Nevertheless it is an interesting book and one that will prove helpful to every thinking poultryman, whether he agrees with Mr. Laurie or not.

\* \* \*

Maine Agricultural Experiment Station has recently issued a revised to February, 1913, bulletin, Circular 471, entitled "Poultry Management at the Maine Station." It contains 78 pages and outlines the results of several years' experience in poultry work of the station. The circular was prepared

by Dr. Raymond Pearl. It devotes chapters to: "Poultry Hygiene and Sanitation," "Selection of Breeding Stock," "Raising Chickens," "Feeds and Feeding," "Housing," "Yards," "Lice," and "Trap Nests." The circular is free to residents of Maine. Poultrymen living outside the state may obtain a copy by sending 20 cents, coin or other currency, with their request, to Director Charles D. Woods, Orono, Me. Postage stamps are not accepted.

A. P. A. Acrositic.

Every hen and chick should be  
Busy all day long.

That's the way that you and we  
Have them healthy—strong.  
Only breed from good ones too,  
Manage with good sense.  
Poultry pays, if well it lays,  
Some are all expense.  
Oh, be wise I say to you,  
Never kill the hen that lays.

Poultrymen will now convene,  
Ratify their choice last May.  
Every member should be seen  
Standing up for A. P. A.  
In this great Convention  
Don't delay, be on your way.  
Even though you voted wrong  
Never admit contention,  
Thompson's president and strong.

# Poultryman's Calendar

Conducted by  
Prince F. Woods, M. D.

## Vacation time.

Atlantic City. American Poultry Association thirty-eighth annual meeting, August 11 to 16. Headquarters Hotel Dennis. Be sure to be there.

When making ready the houses for fall and winter layers, do not neglect the runs. Dress the land with air-

slaked lime or with wood ashes, and plow or spade deeply, stirring the soil well. Then sow rye, so that there will be abundant fresh, green growth when the birds are housed for the fall.

Cull your flocks as the chickens grow. When you note a particularly promising specimen that is full of life and vigor and growing all the time, leg-band it

and note how it develops. You ought to know your best breeders from chick hood to maturity. It pays.

More greens and more animal food for the growing chicks to balance their grain ration.

Don't use close coops or closed growing houses. Keep the front open and protect against marauders with fine-mesh wire netting. Don't crowd the sleeping quarters and be sure to keep them clean.

Provide shade and if possible shady, green runs. Keep the drinking water in a cool place. Supply good grit and plenty of it. It is a good plan to feed a little grit to growing chicks mixed in with their scratch grain.

Keep a sharp lookout for lice and mites and use good insecticides freely. Where small runs must be used, scrape out the droppings for use on garden land and spade up the runs often. After spading rake in a few oats.

Plan to get winter quarters in order early this season. Renovate them thoroughly and have them clean and sweet for the use of the flocks at housing time next month. It pays to get the early pullets into their winter quarters in September.

Incubators, brooders and brood coops should be cleaned, disinfected, thoroughly sunned and dried and stored for next season's use.

If you feed a moist mash, do not give more at one feeding than will be promptly cleaned up. Moist food spoils quickly at this season, and spoiled or sour grains and grain mixtures are certain to cause trouble. Be sure that the cracked grains fed are sweet and sound. There is always a good deal of spoiled cracked grain sold during the summer season.

Lean-to board shelters and "pup tents" of old canvas are useful at this season to provide shade and shelter in the open fields. They make a cool retreat from the hot sun and a good place to seek protection from sudden showers and thunder gusts.

Sell off the cull cockerels as they plump up to marketable size, or else caponize them to keep them soft-meated until the large roaster size is reached.

Market the fowls you do not intend to winter while the price still holds good. Those you do not intend to keep are best marketed before they molt.

Freshly made whitewash is a great sweetener for poultry houses. Put it on with a sprayer. Strain the wash

THE KODAK GIRL AT HOME

Every step in film development becomes simple, easy, understandable with a

## KODAK FILM TANK

No dark-room, no tediously acquired skill—and better results than were possible by the old methods. It's an important link in the Kodak System of "Photography with the bother left out."

*The Experience is in the Tank.*

Our little booklet, "Tank Development," free at your dealers or by mail.

EASTMAN KODAK CO., 379 State Street, ROCHESTER, N. Y.

through burlap sacking before use and do not have it too thick.

\* \* \*

When chickens start feather-pulling, toe-picking and other cannibalism, get them out on a good big green range and keep them busy. Crowding and close confinement combined with heavy grain- ing are apt to lead to the development of bad habits.

\* \* \*

The chick on good range will eat great quantities of fresh greens and large numbers of bugs and worms, but comparatively small amounts of grain. Does this suggest anything to you concerning the ration you are now feeding?

\* \* \*

Turkeys and guineas when grown on range feed almost wholly on bugs, worms, grass seeds and greens, and eat very little grain even when they have free access to it, and then only a very little at a time. So fed they make

splendid growth. Hand-fed in limited quarters they do not do well if heavily grained, but make good growth on abundant fresh greens, curd cheese, hard-boiled eggs and a little grain.

\* \* \*

If you are planning to enter a pen in one of the laying contests this fall it is a good time now to make preparations for it and to select promising specimens from which the contest flock will be chosen.

\* \* \*

Don't forget that the great Panama-Pacific International Exposition is to be held in San Francisco, Cal., February 20 to December 4, 1915, and that preparations are being made to make poultry one of the big features of the live stock department. It is none too early for you to make plans for the string of exhibits you hope to make there. Every section of this great and

glorious country ought to make an effort for a big display in the interests of our poultry. We are all fond of bragging about the "billion dollar poultry industry" and the magnitude of poultry interests in America. The Panama-Pacific Exposition will afford an opportunity to make a showing of what the "billion dollar" business really amounts to. Be patriotic and get into line. Not only "root" for poultry, but see what you can do to help your home section to make a creditable showing at the exposition.

# E. B. Thompson's Imperial "Ringlet" Barred Plymouth Rocks BARGAIN SALE FOR 1913

First Prize Cockerel and Champion Male and First Prize Pullet and Champion Female at Madison Square Garden, New York, 1913

Is the event in the Barred Plymouth Rocks; this sale stands out with a prominence that is clearly defined.

My special sale list is now ready for mailing and I offer the largest and finest assortment of Barred Rocks in all America at the most decisive price reductions and most emphatic bargains ever recorded.

## This Is America's Foremost Bargain Sale

And goes beyond anything ever before attempted in thoroughbred poultry. It is unprecedented. The resources of my "Ringlet" farm are unlimited and you can now secure Madison Square Garden, New York, winners and sons, brothers, sisters and daughters of New York winners, and birds of this richest New York prize winning blood at the decided bargain prices. Birds bought now at the prices in my special sale list will pay you splendid dividends.

## In This Special Sale List

Are listed the finest show birds, the finest breeders in single birds, pairs, trios and pens that I have ever offered in all my thirty-three years' career as a Barred Rock breeder, and at the rarest bargain prices. There are lots to meet the needs of all—the beginner who must begin right, the old breeder who will improve his stock, and the show man who wants to win in the strongest competition in the world. You will have the solid satisfaction of selection from the largest and richest New York prize winning stock and blood lines in America today—the selections are unbounded.

## The Imperial "Ringlets"

Are the proud product of more than a quarter of a century of Barred Rock breeding—they have the most fashionable barring and even blue color of the present day, they sell when no others will by reason of their matchless quality—no other strain holds so imperial a place in popular favor—their name leads all the rest. To meet success in winning prizes you must have my birds.

(See my ad on back cover page for the wonderful record of my "Ringlets" at last Winter's Madison Square Garden 1913 Show. This achievement takes rank in history as the most wonderful ever recorded since the New York show was founded.)

It will be to your interest to have this special sale list and take advantage of this opportunity to secure "Ringlets" at the cut down bargain prices. It is sound business judgment to buy what you want when offered for dollars less than it is worth, it is justice to yourself and economy. Whatever may be your wants in Barred Plymouth Rocks you will find it in my special sale list at bargain figures. The list will be mailed promptly upon request.

**EGGS** from the world's finest exhibition matings, \$10 per setting; four settings, \$35; 100 eggs, \$60. One-half these prices after June 10th. Elegant 70-page catalogue upon application. Address

# Notes from the Southwest

Conducted by H. H. Stoddard, Riviera, Texas

## FRESH AND NOT FRESH.

**A** NEWLY LAID egg cooked just to the queen's taste, has a peculiar faint delicate flavor, once for all, like the perfection stage of a flower which, when passed, never returns. From absolute freshness to intolerable rottenness there are endless degrees of goodness and badness, and in the curious steps and stages of getting all the eggs in the United States from producers to consumers, there is, as things now go, a loss measurable only by mines of gold.

The difficulties that rise up when it is attempted to stop this loss are many and formidable. Legislation is being invoked to head off the sale of bad eggs, but most of the laws designed to that end are even harder to enforce than prohibitory liquor laws are.

To inspect all the farmer's small sales constantly going on would require an army of government officials as the sands of the sea for multitude, although I am informed that in some places, though the official came seldom, a fine of \$100 when he did put in an appearance suppressed the farm rotten-egg basket to a considerable certain extent.

Beginning at or near the sources of supply, we may enumerate eight principal classes of eggs as follows:

- (1) Independent egg farm, candled.
- (2) Independent egg farm, not candled.
- (3) Farmers' special delivery, not candled.
- (4) Curbstone market, not candled.
- (5) Poultrymen's Association, candled.
- (6) Farmers' Association, candled.
- (7) Creamery collection, candled.

## (8) Grocery collection, not candled.

### Class I.

When a large independent egg farm, bound to no association or organization, sells yesterlaid eggs regularly to a high class hospital, restaurant or hotel, or perchance to one of the best railroad lunch counters' serving eggs in the shell, and those containing specks or blood spots are candled out at the farm, then the very acme of quality is reached. There can be none better. The blood spots are no harm except as they offend the eye, but still they are not just right. The eggs described are even slightly ahead of those taken new laid from nest to kitchen on the table of the farmer, fancier or suburban resident, since blood spots are then commonly ignored. The professional egg farmer must have the most rigid precaution taken from year's end to year's end in gathering eggs. By all means have the eggging done by one person only, and the "egger" should be the most painstaking and responsible party on the place. The plant having its guarantee to maintain, and enjoying the patronage of the very highest class of customers and the highest price, is governed by the strongest incentives conceivable so that here the very zenith of excellence is reached. Eggs always roosterless, no wrinkled, thin shelled or misshapened ones, none stained by rains, and none washed, for the bloom on an egg is a fancy feature, just like the bloom on plums and some other fruits. Class I comprises the very top-notch eggs, and none can be better by any possibility.

### Class II.

The independent egg farm before attaining large scale operations is apt to

dispense with "candling," or rather electro-inspecting, for a few years, because its output is small and its relations to customers quite direct. The eggs being used before they are more than two days or three days old, and always unimpeachable as regards form, size, cleanliness and freshness, the matter of blood spots is ignored by stipulation. Since customer's patrons do not pay the very highest rates, therefore customer cannot afford to pay quite as much as buyers in Class I. This is the stage that most of the egg ranches of the Southwest are in at the present time.

### Class III.

This consists of farmer's private customer, eggs inferior to those of Class I, only as the blood spots and dark specks are not removed, and that generally some of the eggs are not yesterlaid. But they are reasonably fresh and speedily used, in important distinction from the instances where they pass through the hands of middlemen, and as for the spots, they are explained by the seller as harmless and not diseased, when customer mentions them, and finally disregarded. Thus there is a manifest advantage of good faith and confidential relations when producer and consumer are only one step apart.

There is another grade a little lower, to be put in

### Class IV.

The curbstone market, that excellent institution of many southern cities, and lately wisely adopted at some northern places previously without it. The farmer backing up his wagon to the curb, sells to some customer who remembers his face and perhaps his

# FISHEL & SON

Having hatched and reared more young chicks this season than ever before, are offering

## The World's Best White Wyandottes

At a sacrifice to make room for their thousands of growing chicks. In considering the purchasing of stock at bargain prices you must consider the breeding quality, and the line breeding of the stock you intend to purchase. Some stock would be expensive at any price. Not so with the World's Best Strain, bred in line for years, bred so they reproduce themselves year after year. When you can purchase such stock at reduced prices you are sure to get

## A BARGAIN

Send for our special offer for the one month, also our sale list with forty-two lots of birds listed at prices never before quoted on such high class stock. Our new catalogue which covers every phase of the poultry business is pronounced the greatest book of art and the most instructive book published; we would be pleased to mail it to you for 25c in stamps and if it is not worth dollars to you, send it back.

**J. C. Fishel & Son : Box J : Hope, Indiana**

wagon and grey mare, and if quality proves good, calls again. There will always be some wagons where a skin game is carried out on the principle of one lick at a customer and never expect to sell to that customer again. Therefore, this case on the average is of lower rank than those previously mentioned.

Now we come to

#### Class V.

comprising the eggs shipped by an association of poultrymen like that at Petaluma. The producers make egg farming their sole business substantially for butter, fruit and such like are strictly minor interests, and in numerous instances not a penny's worth of anything save poultry products is raised at all. The eggs from associated proprietors, after being tested by electric light, go to market under one brand as if from one farm and one proprietor. This is the style of the great export egg trade of Denmark, the eggs being high grade because anything decidedly bad brought to the packing room is readily traced to the individual who brought it, and he is subject to a severe fine or expelled from the association if the offence is repeated. The eggs with blood spots are not counted as a fault of the fowlkeeper, but by their removal as inferior, to be shipped to Alaska, or for special uses nearer home, the high degree of the brand is maintained. As the poultrymen make their living by poultry they are professionals, thoroughly imbued with a sense of the importance of care in gathering. This care, however, will never be as great as in the classes higher up, for if eggs several days old are smuggled in, as they will be inevitably in some cases owing to the occasional discovery of hidden nests and for some other reasons, the consumer never can know which poultryman sent them. His mug is never visible. There is no direct personal relation. A face to face meeting is what counts wonderfully in commercial transactions. The man at the electric light can vouch for some things absolutely, but can never tell which eggs were yesterday and which are moderately stale and minus the "milky aroma," neither those which are slightly more stale. The association's eggs are for the broad trade, and though always commanding a good price can never hit the choice select places and prices.

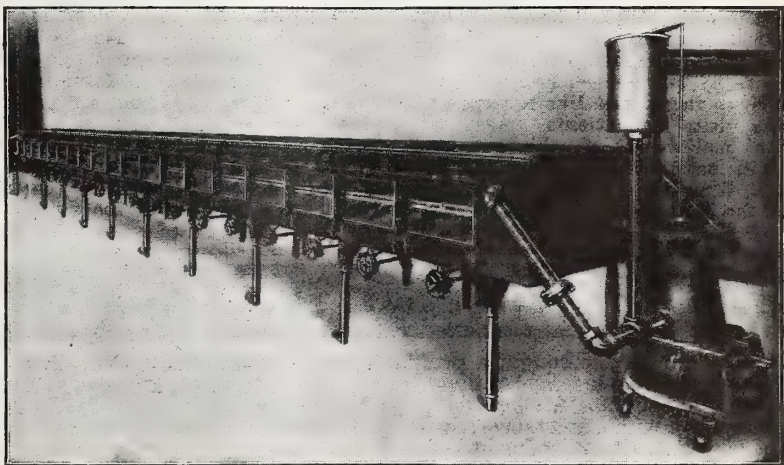

#### Class VI.

This class I must characterize particularly because in my own country a monster poultry plant is to be tried. Its backer and ruling spirit has just been interviewed by the reporter of a San Antonio daily while passing through that city. The reporter is not a poultryman, for he speaks of "registered stock," when he evidently should speak of poultry bred by the Standard. He has, I think, such a registry in mind as if Jersey cows were in question, not knowing that there is no association register of poultry pedigrees. Possibly, however, this new plant may claim heavy laying strains with an egg record of several generations, and the term "registered" may refer to this claim. As for the proprietor himself, he frankly disclaims the title of poultryman, and therefore the reader should not attach to the interview meanings too precise, but should read between the lines a little, in places and in a generous spirit. The newspaper report is in part as follows:

"To own the finest chicken farm in the Southwest and to teach the farmers of Nueces county to sell enough poultry, eggs and butter to provide for all their upkeep in order that their farm products may mean ready cash, is the present ambition of the founder of the town that bears his name, and one of the men who is building a new industrial empire in this section of the state. Mr. —, who is at the St. Anthony en route to New York with his family, told a representative of the Express of his poultry farm plans and something of the methods he is employing to make that farm known from sea

went to Connecticut to employ a chicken expert to manage his farm. Mr. —, the Nutmeg State poultry specialist, is not only familiar with every detail of the business end of the chicken trade, but is a regular chicken physician. Mr. — says he operates on sick chickens with as much finesse and skill as a celebrated surgeon carves for appendicitis and with far more success.

"The chicken farm has just been started, but it is going good. It is equipped with all the latest approved appliances in the way of brooders and incubators. It is located in the center

## "100 to 120 Large, Strong Chicks from 150 Eggs, All Season"

That's the excellent work done by a 3,000-egg Newtown "Giant" Incubator for Chas. A. Loughman, Proprietor of the Glenlea Poultry Farm, Coraopolis, Pa. His "Giant" gave him big hatches of real, profitable chicks all during the past season—not only once or twice. It wasn't chance, but real "Newtown" efficiency that did it. Read an extract from his letter:

"Gentlemen—From 150 eggs in each compartment of my Newtown Giant, testing only on the 10th day for any infertiles, at the finish I always take out from 100 to 117 chicks, and just two days ago 120 chicks. The average was 109 chicks for all season.

"Now, this was not once in a while, but all the time through the season. And, best of all, the chicks are large, strong and fluffy—the kind that live and will be a profit to me.

June 18th, 1913.

(Signed) CHAS. A. LOUGHMAN."

## Newtown "Giant" Incubator and Brooding System See them at Atlantic City

"Giant" Incubators have everywhere given as good results as those of Mr. Loughman, and one "Newtown" enthusiast asserts that he experienced but a one per cent. loss of chicks with his Newtown Brooding System.

See the "Newtown" display on the Million Dollar Pier at Atlantic City during August. A thorough inspection of it and the Newtown Brooding System will prove to you that the "Newtown" has very valuable and exclusive features not equalled by any other equipment.

Let us tell you more about "Newtown" Incubators and Brooding Systems. Write today for our Incubator Catalog I and Brooder Catalog A. Compare the "Newtown" with any other equipment and we know you'll choose the "Giant" for greater profit and sure success in your poultry raising.

**NEWTOWN PRODUCING COMPANY**  
Newtown, Bucks Co., Pa.

of a 32-acre plot in the outskirts of the hustling town, and is already become the center of interest for both visitors and townspeople.

"At present the hatching capacity of the plant is 1,200 chicks every three weeks. Mr. — plans to increase the feathered output to more than 3,000 a week. All the fowls are of registered stock and none but the best will have anything to do with the production of eggs.

"The plan which Mr. — has evolved is one he expects will interest every farmer in the county. He proposes to keep the newly hatched chicks in the brooders until they are a week or ten days old. Then they will be 'farmed out' on shares. Every farmer who cares to join in the wholesale chicken propaganda will be given from 50 to 300 chickens. Then the farmer will agree to raise them under the rules laid down by Mr. —, who will visit the various farms just like a physician to folks visits his patients.

"The marketing of chickens and eggs will be done under the management of Mr. —, who knows that end of the business as well as the running of incubators. Mr. — will

charge the farmers 15 per cent for the incubating and brooding work and the rest of the profits will be divided equally.

"It is my desire to see every farmer in Nueces county availing himself of this opportunity," said Mr. —. "That chicken farm cannot grow too fast to suit me. As fast as extra room may be needed it will be forthcoming. I'd rather see it covering 300 acres than the 32 we have started with. Many farmers have already joined our chicken club, and every one of them is pleased with the opportunity this arrangement affords.

"We cannot only grow better fowls and better eggs under this system, but we can command better prices. Within a comparatively short while I expect to see eggs and chickens and butter leaving by the car load. That will be a proud day for me when it takes place. I'd like to see such a farm in every county of Texas. If such an establishment was located in many communities, Texas would soon become world-famous for its chickens and eggs. Train loads of these delicacies would go out from here to the markets of the world.

"Diversification of crops is the great-

est idea that ever entered a farmer's head. Raising chickens, selling butter and marketing eggs form the cornerstone of diversification. The idea is catching hold," says Mr. —, "and with an enthusiasm that repays me for the trouble and expense of starting the plan. I want to see it spread and already feel assured it has taken a root in Nueces county that will never stop growing.

"I confess that I don't know much about the intricacies of chicken growing and egg producing. That's why I went to Connecticut to get a man who does know. I am paying him a good salary for his knowledge and skill and he is making good."

The reason why this experiment and all similar should be placed one peg lower than Class V is simply that in the latter class the producers are poultrymen and in Class VI they are farmers. They are not by tradition and bringing up farmers (or their wives on whom the burden of responsibility will naturally fall), who have been accustomed to strict poultry notions and likely to be impressed with the necessity of scrupulous care. They are largely cotton farmers from the older black land districts of Texas, and lately settled in a new black land district. What the typical cotton farmer's wife doesn't know about guaranteed eggs and modern commercial poultry requirements generally would fill a big book. There are farmers of endless types in our land, but at the very foot of the series as respects poultry lore are those who are distinctively cotton raisers. Whoever undertakes to teach them how to bring up incubator chicks in brooders, or later to gather eggs with care, will find that it is not as easy as to teach ducks to swim.

The system proposed seems to be essentially like that of Mr. Ellis, of Aurora fame, and may have been copied from it, but the Aurora poultry keepers were mostly either essentially poultrymen before adopting Mr. Ellis' scheme or were at least accustomed to an atmosphere of poultry affairs. This makes a mighty difference.

There will be in the first place a very uneconomical use of time when the manager expert has to ride from farm to farm to show the numerous partners

## More About Germozone

I know a man who bought a profitable poultry farm with 2000 healthy, laying hens and lost 1600 of them within three months. I know another man who bought a 2500-hen farm, producing regularly 100 dozen eggs a day, and within sixty days his egg production had dropped to 8 dozen per day and over 200 hens had died.

It's easy to keep a healthy hen healthy and it's easy to keep a laying hen laying, but it's ruinous to wait until they become sick or until they quit laying before taking prompt action.

On both the above-mentioned farms the chickens had been getting Germozone regularly twice a week in the drinking water and Lee's Egg Maker daily in the food. The new owners "did not believe in feeding medicine to healthy chickens," and had their own notions about feeding, not realizing that cooped-up chickens, in large numbers together, require very different care from the dozen kept in a back yard or the hundred running openly on the farm.

One cannot well disinfect the floors, yards and scratching litter every day, but one can, by use of Germozone in the drinking water, produce an antiseptic condition of both food and drink and also of mouth, throat, crop and bowels.

On our own farm we would as soon think of omitting food as to omit the Germozone water on Wednesdays and Sundays.

Large 12 oz. bottles 50c. New size, one-gal. cans for large consumers at \$3.00 each, equal to eleven bottles. (Express paid for \$3.50.) Sold by more than 10,000 dealers in the United States. Sample bottle, postpaid, 10 cents.

### Silver Campine Cockerels

### Silver Campine Cockerels

I have 50 cockerels for sale, grand birds, beautifully marked, and now between three and four months old. I guarantee each has been sired by

1912 — Silver King, First Chicago Cock — 1912

Among these are the winners at the 1913 fairs and poultry shows. If interested, write me today.

FRANK E. HERING, South Bend, Ind.

Reference: THE AMERICAN TRUST CO., South Bend, Ind.

how to run brooders, like a doctor going the rounds to his patients.

In the second place, in some cases the chicks given to the care of inexperienced persons will at the age of from fourteen to seventeen days die off like poisoned flies, in spite of the manager's instructions, although as a matter of fact there is no better climate for using brooders than this. The soil, however, being sticky at the locality is not anywhere near as favorable as the climate.

In the third place there is no power on earth that can educate and keep up to the notch in egg gathering, people as they run, without occasional results like those found in the grocery Class VIII, which is the opprobrium of the poultry world. Strict rules and fines may keep abuses within bounds, at the expense of much friction and bad temper, but eggs which are though eatable are not strictly fresh, will be smuggled to headquarters again and again, mak-

ing decidedly high average merit of the whole volume impossible.

The fundamental consideration showing the mistake of the whole scheme is that mixed farming is wrong. Specialization as at Petaluma, and in Class I and II, and that only, will win out. Principal progress in civilization has been made and will continue to be made through division of labor. The farmer who follows orcharding, small fruit raising, dairying, trucking and poultry raising, on top of his regular staple field crops is Jack of all trades. He will do nothing well and will scratch a poor man's back all his life.

The intention of the promoter is worthy of the highest praise. He wants to increase the income of farmers. To do this he advocates a little dairying and a little of this and that, poultry included, so as not to depend exclusively on cotton. Proper equipment and necessary skill will be lacking, much time will be wasted and the

whole scheme simply spells puttering.

#### Class VII

differs from the one just described. The managing of fowls is not under supervision, rules being only made regarding gathering and shipping eggs. These are sent from farms in a wide area in connection with shipping cream to a large creamery. The identity of the producer of each crate of eggs is secured, for he is booked as number so and so, and his number is on the crate. The quality of the eggs is graded for each farm, just as the cream from each farm has credit for its percentage of butter fat. The eggs will average a lower value than in all the classes mentioned because of the distances they generally have to be moved and the periods during which they have to wait for transportation, this last affair being specially serious in warm weather. In a subtropical country the less jolting around the better the yolks

## GREAT COLISEUM POULTRY SHOW

AT CHICAGO, ILLINOIS

Fifth Annual Exhibition--December 12, 13, 14, 15, 16, 1913

**Our Past Record**—Four of the most successful shows ever held in America. **Our Aim**—The world's greatest poultry exhibition. We have paid more premiums and put on more real down-to-the-minute features than any other show in America or abroad. We lead, others follow. If a feature is good, you will always find us first to introduce it. Nearly every act of the Coliseum show has been followed by other successful exhibitions. Look for our 1913 list; it surpasses all the rest. **No Risk, No Chances, Everything Guaranteed**—We, the undersigned stockholders, pledge ourselves, individually and collectively, to pay every premium offered by us that is won by the exhibitors: Ernest Kellerstrass, Reese V. Hicks, E. E. Richards, Frank Hare, Geo. H. Rudy, Jas. W. Bell, A. and E. Tarbox, D. M. Palmer, J. C. Dinsmore, H. C. Dippel, C. S. Byers, Chas. G. Pape, A. E. Martz, Wm. A. Stoltz, C. C. Coulter, Wm. A. Sibley, Theo. Hewes. Premium list Nov. 1st. Entries close Nov. 25. Your name on a card addressed to the secretary will guarantee that list will be mailed on time.

will stand up, and in Class I (with which no creamery or other collection system can be mentioned in the same week) eggs are taken from the nests often, put in a cooler at once, and kept iced every minute until they reach the consumer near or remote. Whether by rail or by steamer the cost of shipping two thousand miles will not be over eight or nine cents a dozen in Class I when everything is systematized and working perfectly from the start. When there is a weak spot anywhere as when in Class VII a crate of eggs stands by a can of cream on a platform

waiting for train or trolley car, the eggs will never be high grade afterwards. The strength of a chain is its weakest link.

Regarding the poultry gatherer's wagon going the rounds to a large number of farms, a subvariety of methods not worthy of a class, it only needs to be said that its proprietor runs against a heterogeneous lot of eggs. If he sits down and tests those brought to him before paying for them, the quality of those will be much ahead of those in Class VIII, but although he may reject those beginning to hatch or to decay he cannot reject those slightly stale, and when it must be kept in mind that his cargo is transported on all sorts of roads in all sorts of weather it goes without saying that he can never bring in a load of an average quality better than "just middlin'."

We now come to

#### Class VIII.

There were revelations lately of car loads and train loads of bad eggs outlawed and buried. These were all of them substantially from farmers, not from poultrymen. There are some raisers who are halfway poultrymen; that is, they tend poultry on the side and make it a considerable important branch. As a rule, the halfway sends better eggs to market than the average farmer, and the three-quarter poultry professional sends better yet. The fact that the great mass of eggs comes from the farm not from poultrymen, is mentioned at farmer's institutes and agricultural conventions of various sorts and speakers gloat over it ad nauseam instead of deploring it. Ordinarily, unless collectors' wagons (only a slight improvement) visit the farms, the immense volume of eggs is traded for groceries, the most diabolical feature in the whole of the food supply of the country, bad milk for city babies excepted. The most of the eggs of the land are first bartered for groceries, that's the long and short of it. Glorify the fact in speeches, books and papers, will you? Better mourn over it in sackcloth and ashes. Great movements are on foot in several places, notably in Texas, to abolish the grocery egg trade and have co-operative inspection and shipments of farmers' eggs. The difficulties and expenses of this plan are staggering, but it should be tried thoroughly. At its best it can never lift farm eggs more than from Class VIII to Class VI. They can never get into Class V. Farmers and poultrymen do not behave alike and they never will. The eggs of the former as a class can never enter the charmed circle comprised in Class I to IV, where the consumer of the goods knows the name and face of the producer thereof.

The efforts to better the farmer's methods are praiseworthy. Heaven knows they need bettering. But the trail of the serpent will be there when all is said and done. When an article is of such a nature that a lot comparatively bad, in Jones' basket, brings the same price as the lot comparatively good in Smith's basket, and nobody under heaven can ever know which is which, then Jones will never worry about it, no never.

The attempts to stop by law the enormous loss occasioned by bad eggs are to be commended, but have accomplished comparatively little as yet. In some states which prescribe heavy penalties for the farmer who sells bad ones to

the grocer, and to the latter who re-sells to the wholesaler or packer, the law is as harmless as water on a duck's back. The farmer or his wife bringing eggs to the grocery and taking pay in goods knows well enough that the grocer will not offend a customer and lose trade by sampling and then appealing to the fresh egg law. Far be it from him to commit financial suicide. He puts the eggs from Tom, Dick and Harry into the same box. He will never know who brought him the bad ones and he does not want to know.

Good and bad are sold by him at retail, or perhaps shipped to a wholesaler. The grocer pays the farmer a low price and in trade at that, on the doctrine of probabilities, that is, it is understood that there are probably bad ones, but also good ones, and all that is necessary is to keep the price low enough so that the good will offset the bad.

Now the very poorest grade of eggs are not those of the grocery. There is yet a lower grade of infamy comprising carefully selected bad ones warranted to pop by force of imprisoned gases and used to pelt unpopular orators with. But, ordinarily, unsorted, uncandled grocers' eggs can be considered the acme of badness.

PRATT FOOD CO., Phila., Chicago

## Insecticide Warning

The Insecticide Law requires the plain printing, on each package, of the amount of inert material used, or the material which the Government considers of no value for insecticidal use. Every purchaser of an insecticide should consider this point and should see that the Insecticide guaranty is given by the manufacturer on every package.

**Lee's Lice Killer** contains only 3 per cent inert matter (water). Others contain from 10% to 80% inert matter. Used for poultry and hogs. \$1.00 per gallon.

**Lee's Dip** contains less than 10 per cent inert matter (water). Others, from 10% to 30%. Used for killing lice, etc., on horses, cattle, hogs, sheep, dogs, etc.; also as a disinfectant.

**Lee's Insect Destroyer** (powder) contains less than 10 per cent inert matter (Fuller's Earth, used to prevent caking). Others, from 25% to 90%. Used for chickens, pet stock, vegetables, etc. 1½-lb. package for 25c, 3-lb. package 50c.

**Lee's Flyo-Curo** contains no inert matter. Others, 10% to 75%. Best to keep flies and mosquitoes from horses and cows. \$1.00 per gallon.

This is one reason why the Lee Line is outselling all others and especially accounts for the great increase in sales since the Insecticide Act went into effect. We give greater value to the consumer, better formulae, always strictly maintained; less inert matter; in most cases a bigger package for the money.

The Lee line of Foods, Insecticides and Remedies is sold by more than 10,000 dealers in the United States and in many foreign countries. If not at your town, send for latest poultry book and name of nearest agent.

# QUESTIONS AND ANSWERS

Questions will be answered in this department only when full name and address is signed by the writer.

Conducted by

Prince T. Woods, M. D.

## Skin and Legs Bleach in Adults.

Q. Why do my White Plymouth Rocks, while in the best of health and laying, have the yellow color of beaks, shanks and toes fade or bleach out to a dingy white?

As little chicks they were yellow enough in skin, legs and beak, but they faded as they grew up.

This year chicks descended from my old birds, above referred to, with only a few exceptions have the desired yellow, and these exceptions are pinkish or flesh colored.

My birds are fed dry rations, including bran, yellow corn meal, oat meal, middlings, bone meal, calf meal, beef scraps, wheat, oats, kafir corn, buckwheat, cracked yellow corn, alfalfa meal, and in addition to this they have green clover, lawn clippings and sprouted oats. These things are varied according to their desires and according to season.

Birds are all strong and vigorous and grow faster from the start than any chickens I ever had. They are line bred stock, but I do not think too closely bred. Would like to hold the yellow color in legs and beaks if possible.

C. T.

A. It is a common fault of all yellow legged white varieties that some specimens will bleach or fade in color of skin, legs and beak after reaching full maturity, and some few are off-colored from hatching time on. Comparatively few hold the rich yellow color until two-year-olds. You can blame it on atavism.

By careful selection and breeding only from those which hold the permanent yellow and the constant introduction of new blood of the right sort (with the yellow), usually bringing in the cross from the female side, you may be able to get a flock that will hold a large percentage of permanent yellow, but the chances are that you will sacrifice dead white in the plumage and get a creamy tint.

Bare, dry, sandy runs help to bleach legs. Running in the grass when wet with dew and rain helps to hold the yellow, as also does feeding an abundance of fresh greens, but you can't hold it long without selective breeding.

## Concrete Blocks for Poultry House.

Q. Am putting in a foundation for a Woods' open-air house 20 feet deep by 64 feet long, to be divided into three pens. The man who is doing the work manufactures hollow concrete blocks 8x8x16 inches and wants me to build the house of these blocks, putting on same a roof of dressed and matched lumber covered with 3-ply roofing. Am fearful that this would make a damp house. Can you give any information?

Colorado Springs, Colo. W. A. S.

A. Have not used concrete blocks. Do not believe house would be damp, but believe house of wood would cost less and be more comfortable.

## Wants Large, Quick Growing Chicken.

Q. I have just started in the business of growing roasters and broilers for

market and would like very much to know of a breed of large chickens that grow fast. I have selected the Barred Plymouth Rocks and White Rocks and want another profitable breed. H. L.

Montgomery, Ala.

A. For broilers you will find Plymouth Rocks and Wyandottes very satisfactory. We think the 'Dotte makes a quicker and plumper broiler. They stand forcing very well. The Rocks make fine large roasters. For extra heavy and quick growing roasters a cross is usually preferred. One of the best is the Light Brahma male on very large White Rock hens. Cockerels intended for large roasters should be caponized. They make better growth and stay soft for a longer time.

## Infectious Disease.

Q. I have some fowls that are sick. One cock was sick only a day and a half and died. One hen was sick and we cured her with pepper tea and copperas. We have another that has been sick for a week and does not seem to get any better or worse. She has the same symptoms as the others, except that she is also swollen about the eyes. They act droopy and stand around and sleep most of the time. The discharge from bowels is green and whitish and a little watery. They will not eat but

very little. I expect it would be better to kill them, but they are very valuable and would like to save them if possible. Please give some remedy. E. E. M.

Leader, Colo.

A. In cases of infectious disease such as this appears to be it is usually the wisest course to kill the sick birds and burn the bodies before the infection spreads to all of the flock. If you must attempt treatment keep them apart from any well birds. Give each specimen one-fourth of a teaspoonful of epsom salts dissolved in a tablespoonful or more of water. Afterward mix ten grains of calomel with two quarts of their drinking water and allow them no other drink. Feed on easily digested soft food only for a few days until they improve. Clean up and thoroughly disinfect the poultry houses and runs.

## Going Into Poultry Business.

Q. (1) I am contemplating going into the poultry business and would be glad of any information and suggestions that you can give me on the subject. Please give an estimate of the cost of feed, etc., for a flock of 2,000 hens, where all feed is bought. Also a fair average of the number of eggs per annum such a flock should produce.

A. (1) Cost of feeding will vary from \$1.25 to \$1.75 per bird per year, according to management of buying, feeding, etc., and the variety kept. If you get an average of 12 dozen eggs per hen per year you will be doing very well; 10 dozen per bird will come nearer the average for flocks of that size.

Q. (2) What plan of buildings would you suggest and what number would it be advisable to house together? Would you suggest erection of a number of

# French's Poultry Mustard

The Original Poultry Mustard—Absolutely Pure—Patent Applied For

## For the Moulting Season

Its superior qualities and benefits are most noticeable, "Use it freely during the moult." Rapid moulting like rapid growth are both essential for best results. Use it now.

## Old and Young Thrive on It

Experiments here and in England have proven its value. It is used and recommended by thousands of poultrymen. It is not the amount of food a hen eats, but the nutrient, she extracts from food by the digestive process that supplies all nature's demands and produces eggs.

## BEWARE OF IMITATIONS

### Insist on Having French's Poultry Mustard

Sold in Sealed Packages Only

French's Poultry Mustard is a scientifically manufactured article containing the flours of different mustard seeds so blended to produce the greatest strength in the volatile principle that is desired, and is required to produce the fortunate results arrived at by the users. We regret there are imitations and inferior brands offered so see to it and accept only "FRENCH'S."

A teaspoonful to six to twelve fowls fed daily in dry or wet mash. Booklet for the asking.

## Used Exclusively by the President of the A. P. A.

Amenia, N. Y., July 10, 1913.

The R. T. French Company, Rochester, N. Y.

Gentlemen:—French's Poultry Mustard has given me most satisfactory results, have used it two years through the moulting season and am pleased with its value as a stimulant during this period and an aid in rapid moulting, restorer of energy and an assurance of greater egg production. I fully believe there is nothing just as good as "French's Poultry Mustard" for fine birds and greatest possible results. The "Ringlets" are better than ever.

Yours very truly, E. B. Thompson.

French's Poultry Mustard is sold by dealers everywhere. If your dealer does not handle it, send us his name and we will fill your order direct. French's Poultry Mustard is sold at 20 cents per pound in six and ten-pound boxes and 25-pound kegs. Sample package, 1½ pounds, 35 cents.

The R. T. French Company, Dept. A, Rochester, New York

pens or one large building with several pens screened off? Should a heating plant be installed in house for winter and at what temperature should the house be kept?

A. (2) Would prefer open-front colony houses arranged at convenient distances so that complete circuit of buildings will bring attendant back to point near starting point. Houses 20x20 feet, economically built at first cost not to exceed \$1.25 per bird housed. Such house would comfortably house 100 layers and in fall might be made to accommodate from 125 to 150 birds until final culling. Houses single walled. No heat in laying houses.

Q. (3) What particular breed or breeds do you recommend as the best layers?

A. (3) It is largely a matter of your personal preference. All of the American varieties will give a satisfactory account of themselves and the popular Mediterranean and English varieties lay well.

Q. (4) Do you consider the proposition a profitable one? I have been advised that where feed has to be bought there is very little profit in it.

A. (4) A properly managed commercial plant should yield a comfortable return on capital and labor invested. Best returns are to be had on a plant which is operated and managed by the owner, with the assistance of low-cost laborers. A 2,000-hen egg farm should yield the owner, who gives all of his time to it,

## THE AVERAGE HEN

lays 80 eggs per year. Treated with "OCULUM", she will lay 120. Dollar bottle sent on trial this month. Pay if it pleases you. "Oculum", Box 3, Salem, Va.

## DIRK'S RED MITE KILLER

One application kills all mites and prevents their reappearance during the season. Keeps fowls free from body lice. Makes scaly legs bright and clean. Keeps lard, pastry and sweets free from ants. Write today for special trial price.

North Baltimore, Ohio**  
Marshall & Marshall, Niagara Falls, Ont., Distributors for Canada.

an income of not less than \$2,000 a year to pay for his own services. With no larger plant he should be able to do with very little hired help. Success depends almost wholly upon the man. It is not a get-rich-quick business.

Q. (5) Would 110 miles from a city of 500,000, with several smaller cities closer at hand, be a suitable location for such an enterprise?  
H. G. H.

Detroit, Mich.

A. (5) If the land selected is suitable and favorably located otherwise and if the cities afford a fairly good poultry and egg market, with good transportation facilities, yes. As a rule the nearer you are to a big city, the better the opportunity to market produce at a good price. Some locations less than 50 miles from a big city are not favorable because of difficulties in marketing the product.

### International Egg-Laying Contest.

Q. When and where will the next international egg-laying contest be held? To whom shall I write for particulars?  
Burkeville, Va. M. F. R.

A. Connecticut Agricultural College, Storrs, Conn., has announced an "International Egg-Laying Contest," the "third annual competition," to begin November 1, 1913. Particulars may be had of Prof. W. F. Kirkpatrick, Storrs, Conn.

We understand that the Philadelphia North American will start a contest at the same time, particulars of which can be had by addressing the North American, Philadelphia, Pa. Missouri Experiment Station, Mountain Grove, Mo., is also expected to continue its laying contests.

### Long Wing Feathers, Droopy Chicks.

Q. Please give cause of trouble with chicks about one month old; they stop gaining, wing feathers grow long and the chicks droop. No lice can be found on them. Their quarters are clean. They have plenty of good grain and

drinking water.

Subscriber.

A. You do not feed enough animal food. The chicks need beef scraps, milk curd, more bugs and worms, etc. Also should have an abundance of green food and be given a good-sized grass run.

### Blood Spots in Infertile Eggs.

Q. Would like to know the cause of blood spots in infertile eggs. Am under the impression that this trouble is very uncommon. My cock has been out of the pen for four weeks and I have had an egg nearly every day with blood spot in it.  
M. H. A. B.

Dichland Centre, Pa.

A. Blood spots in eggs are of very common occurrence. The fertility or non-fertility of the egg does not necessarily have anything to do with the case. The spot of blood is due to a tiny drop of blood from some ruptured vessel, usually occurring at time when yolk is released from the cluster. If you will investigate anatomy and physiology of egg organs you will be surprised that the tiny-clots do not occur more frequently than they do. Such blood spots do no harm, except that eggs containing them should not be included in high quality table eggs for sale, as it may lose custom. The egg is perfectly good and edible. Where a hen regularly lays eggs containing large-sized blood spots, it is a wise plan to seek her out and market her, as she is not liable to recover from the slight abnormality of her egg organs which results in constant recurrence of blood spots. The presence or absence of the male bird will not make any difference, except that sometimes a clumsy, heavy male may injure a layer and the result be shown by blood in the egg.

### Unsatisfactory Laying by Cornish

Q. I recently purchased a pair of Cornish Indian Games, claimed to be pure bred. At seven months old the pullet began laying and laid four eggs, then skipped two days, then laid two

eggs and then skipped two more days and got broody. I broke her up and since then she laid four eggs and then quit. She has good range and plenty of food, but does not lay. What is the matter with her? I feed plenty of milk, table scraps and cabbage, besides grain. Evergreen, Ala. C. B. A.

A. Probably you have been too good to her and fed her too liberally on table waste, which has resulted in her putting on an oversupply of internal fat. She should lay better. Cornish, however, are not classed among the heavy layers, and some of them are apt to be sluggish producers, though we have seen representatives of this variety that were very creditable layers.

#### Wind Puff.

Q. (1) Am very interested in the Questions and Answers Department and would like to have these questions answered. I have chicks running on free range with the hen. Some of these chicks are troubled with wind puff, the skin fills up with air. I prick it open and let the air out, but it comes back in a day or so. Have lost a few chicks.

A. (1) The cause of wind puff is not well known. It has been attributed to disease of lungs and air sacs, with escape of air into the tissues. In cases we have observed we believed the chief cause to be debility and malnutrition. It is not infrequently observed in chickens following operation of caponizing and in cases where there is no apparent injury to lung tissue or to air sacs. Such cases generally recover if a V-shaped puncture is made in skin to allow air to escape. Wind puff chicks seldom make good growth when the "puff" occurs in birds that have not been operated on.

The remedy consists of good care and good food.

Q. (2) Are broody hens fit for food? Cincinnati, O. C. N.

A. (2) Yes, if fat and in good order, as they usually are at the beginning of broodiness. When they have been broody a long time and begin to thin down, we would not care to eat the flesh as it is not in "good order."

#### Remarkable Precocity.

Editor A. P. J.: I have a remarkable pullet bought of Pittsfield Farm, April 22, 1913, and received April 24th. She was eight weeks old on arrival. She began to lay Friday, June 6th. I would not believe it and so lost a week in unbelief. Friday, June 13th, I cleaned out a nest and three of us watched her until she laid an egg. She has laid regularly every day since. She was really only 14 weeks old when she began laying, and it was not until six days later that I had positive proof. She weighs two pounds and twelve ounces and seems like a little broiler, but she shells out eggs like a veteran. If there are younger layers of the Barred Rock variety I would like to know it. She is a great feeder and always goes to bed with a full crop. The joke was on me at first, as when my chicks were received I thought she was a cockerel; she was lighter than the rest in color and looked like a cockerel to me. As she was singing and fooling around the nest several days before I found out she was a pullet, I was going to write the farm and complain that they had sent me a fool cockerel for a pullet. She laid today, June 16th.

Marshall, Mich. J. S. Cox, Sr.  
(If there is really no doubt about the

age of this pullet she is certainly a freak of remarkable precocity. It will be interesting to know how she develops.—Ed.)

#### Scaly Earlobe.

Q. I have a R. I. Red cockerel and lately there has appeared on his earlobe and wattles, on one side of head only, a sort of white scurf. The heavier part of it will scrape ok. It resembles the after-effect of frostbite, somewhat. What is it and what the remedy?

Onaway, Mich. C. D.

A. The trouble may be parasitic, or the scale may be due to blistering with kerosene or lice-killing liquid. In either case, cleanse the parts with warm soapy water and apply unguentine. You can obtain same in tubes from your druggist.

#### Duck Rations Wanted.

Q. Will you kindly publish in A. P. J. good rations for feeding Indian Runner ducks?

R. E. B.

Ivor, Va.

A. The following rations quoted from "The Poultryman's Formulary (by Woods) are excellent:

#### Ducklings Under Four Days Old.

Wheat bran .....1 bushel  
Corn meal .....1 peck  
Low grade flour.....1 peck  
Fine grit .....2 pounds

Mix into crumbly mash with cold water and feed four times a day all they will clean up in twenty minutes.

#### DUCKLINGS FOUR DAYS TO FOUR WEEKS OLD.

Wheat bran .....1 bushel  
Corn meal .....1 peck  
Low grade flour.....1 peck

U. R. FISHEL'S AD in this issue will interest you. Read it.

# 4

## OYSTER SHELL, \$1 A TON

Five pounds of our Prescription No. 4 contains more egg shell material than a ton of oyster shell. Its use makes eggs a certainty. Feed according to directions and it will save all the cost of beef scrap, charcoal and grit. Feed now and it will insure your hens an easy molt. Feed continuously and your eggs will insure such vitality that White Diarrhoea will be unknown in your chicks at hatching time. Guaranteed to prevent and cure egg eating. Five pounds \$1 and your money back if not satisfied. Trial carton 25c. Sample 5c. Remedy circulars and our profit-sharing coupon free.

Nabob Remedy Co. :- Box 1 :- Gambier, Ohio

## Monmouth Farms'

BREEDERS OF THE TWENTIETH CENTURY DUAL PURPOSE FOWL

## Wonderful Leghorn Offering

During August we will hold our annual clearance sale, which will include many of our New York and Atlanta winners.

1,500 S. C. White Leghorn yearling hens.....\$1.75 each  
1,000 S. C. White Leghorn two-year-old hens...\$1.50 each  
500 S. C. Buff Leghorn one and two-year-old hens from.....\$1.75 to \$2.50 each

Deduct 25 cents per bird from the above prices for orders of 100 or more.

Also a fine lot of young exhibition stock in perfect condition for early fairs—prices for show stock on request.

This entire lot is line bred for heavy egg production, and will make ideal breeders for the coming season as they are large vigorous birds of true Leghorn type.

Can you afford to miss this great opportunity? Order at once for they will not last long.

Monmouth Farms

J. C. Punderford, Owner  
Thos. Lockwood, Supt.

Box 23, Freneau, Monmouth Co., N. J.

Fine-ground beef scrap.....3 pounds  
Fine grit .....1½ pounds

Beef scrap should be scalded before mixing with grain. Mix mash with cold water. Feed four times a day all they will clean up. Give cut green clover, fresh cut rye, or cabbage freely.

**DUCKLINGS FOUR TO SIX WEEKS OLD.**  
Wheat bran .....3 pecks  
Corn meal .....1 peck  
Low grade flour.....1 peck  
Fine grit .....1 pound  
Fine-ground oyster shells.....½ pound  
Scalded beef scrap.....3 pounds

Mix in 10 per cent fine cut, fresh green food. Mix mash with cold water; feed four times a day all they will clean up.

**DUCKLINGS SIX TO EIGHT WEEKS OLD.**  
Wheat bran .....1 bushel  
Corn meal .....1 bushel  
Low grade flour.....10 quarts  
Beef scrap .....12 pounds  
Fine-cut fresh green food.....1 peck  
Grit .....3 pounds

Mix into crumbly mash with cold water. Feed all they will clean up three times a day. Keep oyster shell before them.

**DUCKLINGS EIGHT TO ELEVEN WEEKS OLD.**

Corn meal .....1 bushel  
Wheat bran .....2 pecks  
Low grade flour.....2 pecks  
Beef scrap .....10 pounds  
Grit .....2 pounds

Mix into crumbly mash with cold water. Keep oyster shell always before the birds. Feed green food with the mash at first, then less freely until within ten days to two weeks of market time. Then omit green food altogether.

**LAYING RATIONS FOR BREEDING DUCKS.**  
Wheat bran .....1 bushel  
Corn meal .....1 bushel  
Beef scrap .....10 pounds  
Low grade flour.....1½ pecks  
Boiled vegetables, turnips, beets or potatoes .....1 peck  
Scalded cut clover or clover rowen, green rye or cabbage.....1½ pecks  
Grit or sand.....3 pounds  
Above mash should be mixed with

cold water and fed night and morning. At noon give light feeding of cracked corn and whole oats. Keep fine grit, fine ground oyster shell and pure water always before the birds.

#### Disinfectant for Soil.

**Q.** What do you think of blue vitriol solution as a disinfectant for such parts of poultry runs as can be reached only with difficulty? Would it be a good thing to spray on a weak solution and spade it in?  
J. D. N.

Albuquerque, N. M.

**A.** Would not care to use copper sulphate in that way. A 2 per cent solution of sulphuric acid in water would be better and cheaper. This might be followed later by scattering slaked lime over the soil and spading that in. It is well to put the lime on just before the ground freezes in the fall and to spade it in just after the spring thaws. The weak sulphuric acid solution is good for warm weather use.

#### Worms.

**Q.** I have been losing hens from worms. I have Leghorns and Orpingtons. On examination I find a small hair-sized worm in the intestines. One had worms nearly the size of the lead in a lead pencil and about three inches long. I have tried santonine, turpentine, castor oil, and so far have only saved one. Their feathers seem to get loose in a few hours after they get sick and one would think they had been scalded. If one lives a day, which is seldom, it becomes so offensive you can hardly go near it. I saved one with turpentine and ginger tea. Gave the well ones a dose of turpentine in the mash. Some act as if they had limberneck. I found the worms in large numbers.  
Hot Springs, Ark.  
D. P. C.

**A.** You have a big job ahead. It will be necessary to treat all your fowl for worms and to thoroughly disinfect your poultry quarters and keep them disinfected regularly until several weeks after the last worm symptoms are gone. As long as they can scratch

about in droppings and litter that are infected by hens harboring worms they will continue to develop worms from contaminated food and drink. Use a 2 per cent sulphuric acid solution freely to spray poultry house, floors and runs. Burn all droppings daily. Burn up all litter and nesting material. Use no litter while treatment continues, keep floors sanded and use planer shavings in nests.

Starve the flock for 24 hours. Then give each bird a dose of one teaspoonful of turpentine mixed with two tablespoonfuls of sweet oil. Introduce this into the crop directly with a long-nosed syringe, that has a nose easily passed down the gullet. Follow this within about an hour with a moist mash containing one-fourth of a teaspoonful of epsom salts to each bird. The following day let them have sour milk seasoned with ginger and give a daily moist mash containing chopped garlic bulb. If any worms are noted at end of week, repeat the treatment. If any seem weak after purging with turpentine and oil, or following the mash containing salts, give them warmed milk seasoned with ginger. Don't scald the milk.

#### Lay Soft Shelled Egg and Then Die.

**Q.** I had four good laying hens. After laying well they suddenly laid soft shelled eggs and in about twenty-four hours after that died. I feed plenty of good food.  
A. W.

Smithport, Pa.

**A.** It would require a careful post-mortem examination to determine cause of death in these cases. If all died about the same time and with the same symptoms, would suspect poisoning.

#### Molt of Yearlings.

**Q.** I want to keep over about 200 of my yearling hens for another laying season. Is there any particular ration that can be fed from now on, and during the molting season, that will shorten the molt? Some advise linseed meal fed during the molt, and one in particular recommends a mash containing one

Ringlet—First Prize Cockerel and Champion Male at Madison Square Garden, N. Y., 1910-11

## E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

**EARLY WINNING SHOW BIRDS**  
HATCHED IN JANUARY, FEBRUARY AND MARCH OF THIS YEAR

I now offer the finest early hatched exhibition Barred Plymouth Rock cockerels and pullets that I have ever produced. They show elegant size and shape, fine heads and deep narrow sharp clean cut "Ringlet" barring—they are my richest New York first prize blood of 1913.

**These Birds Are Ready to Win at the Fairs  
and Early Shows**

The demand for early show birds will be enormous this year and I strongly urge you to place your order as soon as you can. I will hold birds ordered and ship when wanted—the prices will be very reasonable.

**I Offer Early Hatched Breeders Also. See My Ad of Bargain Sale of Yearling Birds on Page 1125.**

Richly illustrated 70-page catalog mailed upon request, it is full of illustrations of New York winners from life.

Lock Box 510, Amenia, New York

part of linseed meal to four parts of other meals. What would be a good fattening ration for hens intended for market at the end of the laying season?

Denbigh, Va. S. C. S.

A: We don't believe that it pays to attempt to force the molt. Get the hens you intend to keep over out in an orchard or wood lot and let them roost in the trees through the summer and enjoy the shady range. Keep a good hard grain mixture before them and supply good beef scraps, grit, shell and water. If the range does not have an abundance of green food growing on it, then supply all they will eat of fresh greens. You can use a little linseed meal in the mash, but the best results

we ever had with prompt and clean molt were obtained last season from a flock running in the pine woods without shelter and kept supplied with an abundance of greens, a mixture of hard grains and a hopper of scraps, shell and grit. We didn't find linseed necessary. For fattening hens that have stopped laying feed plenty of whole corn and beef scraps. Keep the food before them in hoppers. A mash of equal parts bran, corn meal and ground oats will help, but is not absolutely necessary. We have had very satisfactory results with whole corn and scraps. If in good order at the start, two or three weeks will make them "hog-fat."

short, high and low, to one of rare proportion and dignified from every viewpoint; while the under-barring during the past ten years has been improved at least 75 per cent. These improvements are evident and have been favorably commented upon by all that have eyes to see and are fair enough to give credit where and when due.

#### Why Change Now?

After all these years of breeding along the same general lines as now and with results attained, what good reason have we to make any changes at this time? I would answer that "Positively none," I believe, and with the best of reasons that we are rapidly nearing the goal of perfection in the Barred Plymouth Rocks. I believe that we are on the right breeding track to better things and to the greatest possible success with this variety. They are breeding true to shape; they are breeding true to the color and barring desired; their practical qualities have been improved; they grow and mature faster and lay more eggs today than ever before; they are more popular and are bred to a far larger extent than ever before, and they are now bred to a higher general state of perfection than any breed known. The original breeders and the makers of this variety well knew their possibilities and, thanks to them, they arranged accordingly.

#### The Breeding Question.

The greatest of all questions in all live-stock classes, and the one we really know less about is that of breeding. Nature has its hidden laws that we have failed to properly grasp fully, while it is true that we have succeeded to a large extent in breeding, there is still much for all to learn. The results attained of one, two or a dozen years prove but little; tests carefully made often contradict themselves, but we do know that no two birds are constituted just alike in breeding value, and by the time we do find their strong breeding points they usually die. We have seen two cockerels bred that were full brothers; the one did produce most excellent females, but never a male worth over twenty cents a pound, while the other produced excellent males and ordinary good females. They were bred for two years and with change of mates, but with the same results. We have seen this same condition time and time again and with White Rocks, Leghorns, etc., as well. This same condition is

## The Barred Ply. Rock Question

The Present Standard Has Proven Popular and no Radical Changes Needed Now. *By H. P. Schwab*

WITH the revision of the Standard near, particular interest as usual centers in the Barred Plymouth Rocks. All varieties have their champions and all have their knockers, and in this latter respect the Barred Rocks surely have their share. There are always some who seem to think they were made to change things and that nothing is just right and proper unless it is according to their will and their personal interests, and if we are to believe all we hear, the changes now proposed are most radical and positively foolish, to say the least. It is evidently a habit with some to propose changes, then seem never to be fully satisfied with conditions as they are, probably for the reason that they fail to grasp the real value of the law and to properly understand the breeding questions.

We have every reason to believe that the truly great breeders of this age, without exception, are well satisfied and content with the Barred Plymouth Rock Standard as we now have it. The quality of their stock and the most evident progress made the past years absolutely prove the Standard requirements as now had to meet all the demands for quality breeding and for future progress.

#### The Standard the Law.

The Standard is the common law for us all; it is the guide to follow, and

thousands upon thousands of breeders throughout this land have vital interests in sustaining it. These interests are of value to them, as they represent investment, in many cases livelihood, pride and love for the fancy, and when we consider Standard changes we have the two-fold duty to consider these interests as well as that of the variety and breed. Therefore let us look well into all propositions of changes, and let them be well tested and proven before we adopt them. We can't go back, our aim is forward, but only so when assured that it in fact is forward and of benefit to all the breeders in general and not only one or two.

The Standard as we have it today in general demands is practically the same as it has been for thirty years or more, for all this time, and year by year, substantial progress has been made, and in particular during the past ten to fifteen years. It has taken most of this time to build the foundation of the breed as the originators desired, and when that was had to a proper degree the results have followed more rapidly than we dared hope for. From the wide open-barred birds to the narrow, from the broken center and curve-barring to the straight across barring, from the frosty edge and white tipping to the sound dark end-bar, with evenness of surface color, from all shapes, long and

## YOUNG'S STRAIN S. C. WHITE LEGHORNS

(I HAVE NO OTHER BREEDS)

My strain won every prize and special offered at the world's greatest show, Madison Square Garden, New York, January, 1913. My individual winnings were: Cocks 1-3-4-5-6; hens 2-4-5-6-7; cockerels 1-2-3-6-7; pullets 1-3-5; pens 3-5; Elmhurst trophy, value \$150.00, for best display; New York State Cup, value \$50.00, for best display; New York P. & P. A. Special, value \$25.00, for best display. N. S. C. W. Leghorn Club special for best display; special for best cock; special for best male; special for best shaped male; special for best colored male; special for best headed male; special for best cockerel; special for best pullet; special for best female; diploma presented by A. P. A. for best cockerel. In fact, for the past ten years, my strain has won in every show of any note in the United States and Canada. They are the standard for all the Leghorns of America, and the greatest layers of all varieties of domestic fowl. (Remember you cannot win without my strain.) Mating list free. Address

D. W. YOUNG

MONROE, NEW YORK

also found in the females. There are those when properly mated will produce the rare males, and if not rightly mated will fall way short of reproducing their own quality. This same question confronts the breeders of all classes of live stock alike. In this is found the object of small matings and more of them. We did not intend this for a breeding article and only mention these facts to impress our readers with the objects before us and to plead for the future safety of the breed we all love so well.

Yes, indeed, we have much to learn along these lines. The lessons of the past thirty years are invaluable to us and as time goes by we can hope to do better if we adhere strictly to the principles we have followed with success so long.

#### Under-Barring.

It is now proposed to eliminate "under-barring." The proposer says it is not natural to have under-barring and refers to wild birds, etc. The Barred Plymouth Rock is not a natural variety in that same sense. They are a made-to-order variety, as everyone knows, and mingled in them is the blood of a dozen or more breeds and varieties, if we can believe their history, and we do. They are the result of crosses made, and it has been amply proven that they can be bred with under-barring just as well and easy as without it. We know that in one or two lines it is difficult to get proper and consistent under-barring, but that is only a condition that confronts those breeders alone, and it is up to them to try to find the cause and to breed it in their line, as the Standard demands it, and not to decry it.

Under-barring has its value and pur-

pose, in fact we know of no quality that is as essential or of more importance to the general quality and breeding value of the Barred Rock than is under-barring. We have written of this many times before and have fully given our reasons of knowing its value, and the only reply I have seen made was by an eastern breeder who said it was of no value, but he failed to back his statement with facts or even any reasons whatever.

Under-barring has a thousand reasons for existing in this variety, for it really controls every feather and every bar on every specimen. It casts its strongest effect on the surface color and barring. The brightest and snappiest surface barred birds always excel in under-barring. Go to the great shows where the best specimens bred are seen and you will find that eighteen out of the best twenty birds seen in each class also excel in under-barring; you will very rarely see a bird with good under-barring that does not carry that feature the entire length of the feathers, and with good tips and little or no intermingling of color. Cloudy under means a smutty surface every time.

Ask the men who have made a pronounced success of breeding the Barred Plymouth Rocks and they will tell you that under-barring is the choicest and most valuable heritage of this variety. Mr. Victor W. Bradley, of Bradley Brothers, writes (July 10, 1913): The suggestion to eliminate under-barring seems too absurd to claim serious consideration. Mr. E. B. Thompson writes (July 8, 1913): All the good we have in Barred Rock color and barring is due entirely to under-barring. Mr. C. H. Welles writes (July 11, 1913): Un-

der-barring is the Barred Rock's greatest asset; it is positively necessary for proper surface barring and evenness, and so on down the line we could quote from dozens of others to the same effect. Let us always demand consistent under-barring, and with it be assured of the bright, clean and sound surface barring and evenness of color throughout.

#### The End-Barring.

It is also proposed to change the tip to end bar from dark to light. How inconsistent this is. We have been breeding for years to get the end bar dark, and it is only within the past few years that we have been able to get this to a proper extent. To now change and to have the end bar light would take us back over the road we just came and would bring with it the birds with the light necks and saddles and the washed-out wing-bows. It took many years of breeding to erase those defects, and never again do we want them.

#### Other Changes Proposed.

Other changes suggested are to have two Standards, one for the cockerel line and one for the pullet line.

Second—To entirely eliminate the cockerel line and adopt the pullet line as the Standard, etc.

Really foolish, ain't they?

For exhibition to have the male and female match in color made double mating necessary. Their greatest beauty is found in having them match each other in color, so what possible use would we have from two Standards? Double mating is no hindrance, nor is it solely applied to this variety, and if it was, why should we ask of them that which we ask of no other variety?

there. As long as nature gives to different birds the particular strength of either male or female production, and but very seldom the gift of both to any one specimen, just so long we will have double mating, and no breeder will accept that as a drawback as long as he can produce quality birds. The question is to produce quality, and nature's laws must regulate; man can't.

### The Cockerel Line.

To eliminate the cockerel line and to adopt the pullet line alone is the rank-est suggestion of all. Permit me here in closing to review these lines as we have them today.

The cockerel line and its progress is very pronounced. The results of this mating when properly made and of line bred birds has been most gratifying. The breeders can confidently expect and get a very large per cent of birds true to form and color from this mating in both males and females; the males are of the exhibition shade, while the females are a shade darker as a rule. In these cockerel bred females we also note great advancement, as now being bred. They are clean barred surface and under and the barring is narrow and sharp, but while a shade darker than exhibition color they come better each year and give the greatest possible promise for the future. This cockerel line as now produced matches itself far better than does the pullet line, and we firmly believe that if we ever do have single mating, we can and will get it from the cockerel line.

Females of this line of breeding have been the feature of the great shows for a number of years. At the Chicago Show we are told the judge refused to place some females shown by an eastern breeder who only breeds the cockerel line, saying that they were too bright and good to produce fine cockerels. If this be so, then I say that we have the single mating before us now and can with a few more years of breeding have it in fact from the cockerel line. I have seen these females referred to and also cockerels from the same line. Both have highest merit and as we handled those wonderful females we could not blame the judge for the position he took, as he could not see as we did the value of this line and their possibilities.

### The Pullet Line.

The breeders have every reason to be proud of the progress noted in the pullet line. The beautiful males seen at the shows are attractive, but they are just coming and I dare say that this line is not at this time as far advanced as is the cockerel line. Those beautiful males are rare now, but if the breeders will persist they will get them with regularity and in good numbers. We believe in the proper crossing of the two lines by degrees, and it is this crossing that has made the pullet line what it is today. Some may not care to have me tell this, but it is a fact, and the time has come to speak right out in meeting. A prominent breeder wrote me years ago that if he could improve his birds by crossing a woodchuck he would do so, and I am of the same mind. We want better Barred Rocks and more of them. We want them more popular, but before we sanction radical changes in the Standard we want to be shown. We have bred and loved them for thirty years and have had the pleasure of judging them for twenty-one years, so rest as-

sured that we wish them well and in upholding their present Standard we most assuredly feel that we are working for their best interests, and for their best future.

## NOTES FROM ENGLAND

CONDUCTED BY

MISS CAREY, TOYNTON RECTORY, SPILSBY, ENGLAND

### THE POPULARITY OF THE CAMPINE.

ON all sides today people are asking what is all this talk about the Campine, what is the breed, and what are its special points? Tell us more about it, we are interested, and every mail from across the pond asks for description, how to breed, rear and handle the stock, and whether they are a breed that will bring success to their owner.

I must candidly admit that when first the Campine was brought to my notice I paid little attention to the breed. Beside the massive White Orpington they looked but a toy, and for some time I did not interest myself sufficiently to test them and find out what was attracting attention, until the leading Campine yards in the country induced me to exchange a pen of exhibition White Orpingtons for one of Silver Campines, after which it did not take long, once having them in hand, to know their value.

Now we must remember that it would be quite unfair to compare a Campine with an Orpington, since the birds are bred for different purposes; they have different ends to serve, but probably if one hunted the earth over, it would be hard to find a more perfect "second string to one's bow" to fit into an Orpington farm and thus double the profits, than the Silver Campine.

In the Orpington we have a bird bred to meet the needs of the general public who demand an all-around bird. But in this world of ours, perfection in any single animal or bird, is hard to find and just where the Orpington fails when the weather grows hot in early summer, from broodiness, the little Campine steps in and most ably fills up the gap.

It is now well known that this little

bird is of Belgium origin and was imported into England in 1899. At that time, however the male bird instead of being barred like the hen as our English and American standard of to-day demand, carried a white saddle or shawl, giving the bird a far less distinctive appearance.

From the date, however, of the alteration in the Standard to its present form, the breed at that time, none too popular, went steadily ahead, and now we find the Campine clubs some of the strongest in England and before long no doubt will also lead along the front line in America.

Among the many points it would be difficult to say perhaps exactly what forms the distinctive attraction, but to the lover of beauty a flock of well barred Campine pullets is a picture that few fail to admire. Just as with the Barred Rock, so with the Campine, the beauty, however, lies largely in a clear, clean, barring that shows up even in the distance with the white neck and hackle, and dark prominent bright eyes. The bird is a dainty little article, with slender legs and sprightly carriage, with quaint attractive little ways that appeal to all after the heavy and more cumbersome movements of heavier breeds.

As a profit maker it has much to say. It produces an abundant yield of large white eggs, and I fancy it will not be long before the Leghorns will have to face a dangerous rival in the egg-laying competitions. The eggs are pure white and of good size. They lay throughout the year and seldom go

broody; during the moult there may be a short rest, but it is quickly over, so that by judicious hatching, eggs can be supplied all the year round. The heaviest crop in England falls from February to June, and chicks can be hatched and reared with success right up to the end of June for stock and even exhibition purposes.

The youngsters mature rapidly and the cockerels are easily picked out at quite an early age. A little care is necessary when the wing feathers begin to lengthen, but a careful diet of flesh-forming materials and less of the feather-forming seeds place these difficulties at a minimum. They grow well when young, in confinement; in fact, on the whole, I prefer to rear them in confinement until eight to ten weeks old, if possible, and always avoid long wet grass until they are fully half grown. This season, however, in the east of England has been singularly favorable and a grand lot of well-barred youngsters are roaming over the meadows enjoying the sunshine from dawn to dusk.

But what about the Campine as a table bird asks the man who wants to dampen your enthusiasm. In reply we would ask that man, what about a pheasant or a partridge, is it worth eating? Here we come to the very point where, to my mind, the Campine fills a gap in the poultry world. We all love game, but in England, at any rate, game costs money and we can't afford to have it every day, chicken has a flavor of its own and we grow tired, but in the Campine we seem to get a cross in flavor between the chicken and the pheasant. Cooked and served as game and hung about the same time, it has a wonderful resemblance in flavor.

To summarize the points briefly, then, we have a domestic bird to fill the

## YOU WANT TO WIN

**U. R. FISHEL : BOX A : HOPE, INDIANA**

place of game on our table, a prolific layer of a large white egg; a prolific hatcher, since from seventy to ninety per cent of the eggs hatch easily, and with all, a bird of real artistic beauty and one not easily bred to perfection in relation to barring, so that a good value can be realized for perfect specimens, and a well barred pen in your possession can be made a very profitable asset.

Space will not permit of my going into the details of breeding and general management of these birds, but if any are interested I will be pleased to answer any inquiries concerning them.

Just before closing this month's letter, I cannot refrain speaking a word of praise for American Poultry Journal's Year Book for 1913, which reached me this week. Here, indeed, is just what we all need—a veritable poultry encyclopedia. If you have not a copy, it will pay you to get one right away. It will help you out of many difficulties.

#### EGG AND POULTRY DEMONSTRATION CAR.

To aid the poultry and egg producers and shippers of Missouri to get their products to the distant eastern markets in perfect condition, the Department of Agriculture is sending its Poultry and Egg Refrigeration Car on a demonstration trip to all poultry shipping towns in the state. The car started a tour, beginning at Hannibal, Mo., June 27th, and expects to visit every railroad egg center of importance.

The car, which is in charge of two government specialists in handling poultry and eggs, is a complete refrigerating laboratory on wheels. It contains two chilling rooms—one for preliminary chilling of warm eggs or poultry and a second room in which to hold the chilled stock. The reason for the two rooms is that if warm poultry is introduced into the refrigerating room it will cause

the poultry already chilled to sweat. The car has its own gasoline engine for running the refrigerating blowers and for generating the electric lights used in the cold rooms. The engine drives a fan the shaft of which pulls air through the false walls and dampers of the car and forces this fresh air through a large bunker of ice and salt. In thirty minutes the blower will reduce the temperature of the cold room to 32 degrees. It will chill eggs to 40 degrees inside of 24 hours.

The car will go to the following other points:

Mansfield, Mo., Monday, July 28th.  
Mt. Grove, Mo., Tuesday, July 29th.  
Willow Springs, Mo., Wednesday, July 30th.  
West Plains, Mo., Thursday, July 31st.  
Fruitville, Mo., Friday, August 1st.  
Winona, Mo., Saturday, August 2nd.  
Williamsville, Mo., Monday, August 4th.  
Poplar Bluff, Mo., Tuesday, August 5th.  
Piedmont, Mo., Wednesday, August 6th.

#### CURRENT NEWS OF THE POULTRY WORLD.

By J. F. Shureman.

The Southern Railway Company has established a new dairy and poultry department for the territory covered by its lines. A special car will be operated, carrying lecturers to give instructions on dairying and poultry husbandry. Carlton Ball, a graduate of the poultry department of the Kentucky State University, will be in charge of the poultry division.

A standing reward of \$25 is offered by the Zanesville (Ohio) Poultry Association for the arrest and conviction of anyone caught stealing poultry from a member of the association.

W. D. Holderman, the well-known and successful Barred Rock breeder of Fort Wayne, Ind., recently shipped a pair of Barred Rock hens to Prof. Carl Ruch, director of the Institute Minerva at Heilbronn, Germany. Mr. Ruch paid \$100 for the two birds and will exhibit them at the national poultry show at Hanover next October.

The Forest Poultry Farm, of Novi, Mich., has filed articles of incorporation. The capitalization is \$6,000 and the stockholders are George P. Brown and William P. Vivian, of Detroit, and Forest B. Brown, of Novi. They will engage in the breeding of poultry.

Some of the big men of New York state are becoming interested in poultry culture. Jacob H. Schiff is building an immense up-to-date plant near Red Bank, N. J.; Stuyvesant Fish is building another at Rhinebeck, on the Hudson, and Frank Tilford, with his daughter, has acquired the big Lakewood Farms at Lakewood, N. J.

A shipment of six cars of live poultry and two cars of eggs was recently made from Altus, Okla., to New York, the biggest single shipment of the kind that ever left that state.

Theodosia Roosevelt, so named because of her evident antagonism toward race suicide, and said to have

been the oldest hen in America, died on April 27 at the home of her owner, Mrs. Elizabeth Grinnell, of Pasadena, Cal. She was 25 years old. The aged hen laid approximately 7,500 eggs during her lifetime and mothered many a brood of chicks.

Fire destroyed the poultry plant at the Maryland Agricultural College at College Park, Md., recently, entailing a loss of \$10,000. The most serious loss was the destruction of the poultry records, all of which were burned. All the young chicks were saved. The buildings will be rebuilt as speedily as possible.

A Plymouth Rock hen belonging to L. T. Sessions, of Latta, S. C., on May 2 laid an egg measuring seven and one-fourth inches in circumference and nine and one-half inches around from end to end, and weighing a fraction less than half a pound.

Prof. James E. Rice, of the poultry department at Cornell University, Ithaca, N. Y., claims to have the prize egg-laying hen of the country in "Cornell Supreme." This hen laid 660 eggs in three years, the total weight of which was 86.19 pounds, or 25.82 times the weight of the hen. "Cornell Surprise," another crack layer, produced 562 eggs in three years. The remarkable thing about this hen is that she laid more eggs each year, laying 180, 186 and 196, respectively.

#### Tolman's White Rocks

Baby Chicks. The Soft Roaster Strain. Joseph Tolman, Dept. H. Rockland, Mass.

#### ANDREW'S WHITE WYANDOTTES

can win in hot competition. Book your show birds now. Send for catalogue.

J. W. Andrews, Box A, Dighton, Mass.

August, the poultryman's busy month, "keep them growing."

The American Poultry Association will hold its thirty-eighth annual meeting at Atlantic City, N. J., August 11 to 16, 1913.

The convention will be called to order Wednesday, the 13th, at 9 a. m. A good program for the entire week has been arranged and five hundred members are expected to attend.

Several amendments to the constitution are proposed, and these with the revision of the Standard will keep interest and the members busy.

The amendments proposed by Mr. Charles D. Cleveland are particularly worth adopting and we hope they will pass.

The Pennsylvania Branch carries the mantle of Frank De Lancy and proposes to restrict Poultry Journal men from judging and soliciting advertisements at any show. A very similar bill met its fate a year ago at Nashville, and this deserves the same treatment.

We can't help but note that with intended cleverness the original introducer has jumped from under to cover. No doubt he foresees the doom of any and every measure that places a handicap on any man or set of men. Such rules and laws won't work in this free country.

This branch also has a very good proposition to prohibit exhibitors from placing on their coops ribbons won at other shows. This should pass.

The New York State Branch is holding its first mail election. A large and strong list of candidates were nominated and the result is awaited with interest. For president Mr. Robert H. Essex and for secretary Mr. L. D. Howell have no opposition, as we are at least assured of these two reliable and respected officers for the next year.

#### Taken Out Too Soon.

Mrs. Newlywed—These hen's eggs seem very small this morning.

Farmer—Can't help it, lady.

Mrs. N.—Well, let my next ones stay in the nests a little longer.

We just have word from Mr. Charles D. Cleveland, secretary of the New York Madison Square Garden Show, of change of dates. The show will be held December 26 to January 1.

Oh, yes, our fishing trip was a most enjoyable affair and quite successful after we learned from Professor Bell how to thumb the reel. Then with "Old-Top" Ward as guide and instructor we did very well, but who ever thought that it ever reached 99 degrees in the shade way up in Wisconsin?

That the A. P. J. Year Book has

filled a long-felt want is evident on all sides. For reference it is beyond value and we now wonder how we ever got along without a book of this kind. Send your order for one now. With cloth cover, \$1; or with paper cover at 50 cents.

The moulting season is upon us, and the birds need special care and feed at this time to insure rapid moulting. The quicker they moult the better feather and condition will be had. We have every confidence in "French's Poultry Mustard" and recommend it to all as of particular value at this season of the year; in fact, we use it year round and would not be without it.

There can be no question but that hens need a stimulant during the moulting season to repair waste tissues and to invigorate the entire system, and "French's Poultry Mustard" has given us the best possible results the past two or three years. Now you try it.

The society for the prevention of useless noises might make a start by reducing the number of cheers from three to one.

The New York State Panama Exposition Commissioners (Messrs. Drevenstedt, Orr and Schwab) will hold their first meeting at Atlantic City Tuesday, August 12. The commissioners of other States should also arrange to meet there and for a general meeting of all.

Every poultryman should have a colie. They are the dog you can trust and that will guard your birds from all and any danger.

We are pleased to report that the Connecticut Branch has re-elected Mr. C. H. Welles its president. Mr. Welles is one of the breeders that always makes good in any position and his many friends the country over will be pleased to know of his election.

Mr. Welles is and has been mayor of his home town, Stratford, Conn., for a great number of years, and during his spare time breeds those rare "Fluffy-Ruffles," Barred Plymouth Rocks.

This also calls to mind that another well-known poultryman, Mr. George W. Tracey, of Rhode Island Red fame, is now mayor of Kinderhook, N. Y., his original home. I guess the poultrymen are some fellows after all.

We are pleased to report that Mr. George Urban, Jr., of Buffalo has entirely recovered from the accident he met with some time ago. In future he best do his riding in his machine or back of one of his "Royal Black Langshans" instead of those keyed-up trotters of his.

Tell a man that there are 764,591,483,119 stars and he will believe you, but if a sign says fresh paint he has

to make a personal investigation.

The demand at this time of the year for eggs for hatching is surprising. Still there is a reason. Many have best success with late hatched chicks and in some sections they do much better than the early ones.

While away on the fishing trip mentioned we note our friends got busy and sent out circulars and cards regarding candidates for New York State Branch officers. Of course, we appreciate all they did.

The catalogue of the American Barred Rock Club is out and it is a book of interest to all breeders of this variety. The club shows good progress made and we hope it will get out a catalogue of this kind yearly.

#### Dandylines.

He called her "Lilly," "Violet," "Rose" and every other sweet flower that grows. She said, "I can't be all of those, so you must 'Li'lac' everything."

Barred Rock breeders, attention. The revision of the Standard is near and we would wish that you all gave your ideas and opinions regarding the suggested changes without delay. Kindly write the Club Secretary, Mr. H. D. Riley, Stratford, Pa., any suggestions you have to make.

We believe that no radical changes at this time are required and that the Standard as we now have it is about right. The text could be bettered and the values placed on certain sections changed a mite, but beyond that we hope for no change, as the progress made is most evident.

The New York State Fair dates are September 8 to 13. We are assured that the new \$90,000 poultry building will be completed. This is one of the "Great Early Shows" and with a modern building, proper cooping and a good list of judges it promises to be greater than ever.

Again we call your attention to our "Art Department" plan now for your illustrations and special art work and printing and be assured of having it just what you wish it.

We've known some mighty great-hearted fellows who were called "dictatorial" by people who didn't know them.

Never bear more than one kind of trouble at a time. Some people bear three—all they have now, all they ever had, and all they expect to have.

Mr. James T. Huston and the Williamsport, Pa., Poultry Association will put on a free poultry show there during Old Home Week, September 8 to 13. This is a new feature and one deserving of comment. It is hard to get ahead of those Williamsport boys. They are fanciers from the ground up and ever ready to do for the fancy.

The Rochester, N. Y., Industrial Exposition has this year included a full list of classes for poultry. They have one of the best buildings in the country for a poultry show, and this will be a feature.

### Opportunity.

This I beheld or dreamed it in a dream:  
There spread a cloud of dust along a plain,  
And underneath the cloud, or in it raged  
A furious battle, and men yelled, and swords  
Shocked upon swords and shields. A prince's  
banner  
Wavered, then staggered backward, hemmed  
by foes.  
A craven hung along the battle's edge  
And thought, "Had I a sword of keener  
steel—  
That blue blade that the king's son bears—  
but this  
Blunt thing"—he snapped and flung it from  
his hand,  
And lowering crept away and left the field.  
Then came the king's son—wounded, sore  
bested  
And weaponless—and saw the broken  
sword,  
Hilt buried in the dry and trodden sand,  
And ran and snatched it, and with battle  
shout  
Lifted afresh, he hewed the enemy down,  
And saved a great cause that heroic day.  
—[Anon.]

**T**HE VACATION PERIOD is perhaps, more than at any other time the parent's opportunity to bring about a better condition of things in regard to the child's thoughts and habits. True, to be really effective it must be a year-round occupation, but now that the hurry and bustle of getting the children off to school on a certain car, or at a certain hour, is over and we can give more time and deeper thought to the problem.

We are all so entirely a bundle of habits, that it is plain to be seen by any parent that the formation of good habits in childhood is the key to right living. The problem is how it is to be brought about. In the beginning, we must start at the root of things, the child's mind. Give the brain cells something worth while to work on, and the result will be pleasing. With the little tot, simple little games or stories read aloud will do much to bring this about. Stories of bird life, of plants,

trees and flowers. Even the little nursery rhymes of Mother Goose fame, dear to the heart of every child, may be enlarged upon, and the meanings explained in a manner that will give food for thought for many days. The older children should have nature studies that will encourage them in the protection of birds and in the cultivation and care of trees, gardens and shrubbery. For many years thousands of our most valuable birds have been wantonly destroyed by adults, as well as children, until from every part of the country we hear the cry of destruction of crops by different species of worms and insects. In many sections the entire foliage of trees has been stripped by the caterpillar. The work by town or state in lessening such evils cannot be compared to the destruction of these pests by birds. The Chipping Sparrow, that little dooryard bird that nests in the apple tree by your back fence or in a vine on your veranda, can outclass any work yet accomplished by the so-called moth commission. A single one of these birds has been seen to eat fifty-four cankerworms at one sitting. Not alone does she destroy thousands of caterpillars, brown tail moths, tussock moths, but many other kinds of moths and noxious insects. It behooves us to interest the children in the protection of such birds as these. In Massachusetts alone there are more than fifty kinds of birds that feed largely on hairy caterpillars and as many more on the pupae. It is not then to be wondered at that our foliage is fairly devoured by these pests, when according to facts given out by the Audubon Society, ninety per cent of our normal bird life has already been destroyed, and unless we can interest both children and adults in the protection of birds, the other ten per cent will soon go. Here is something in

which every mother and every child could spend a summer's vacation interest, to the greatest advantage to their community. But this would be but the beginning of the good work since it would give the brain cells something to work on.

Idleness is probably the greatest curse of humanity, since it fosters a condition of the mind which favors putting off, instead of accomplishing. The idle brain is the soil in which evil soon takes root and in which it flourishes like the proverbial green bay tree. But idleness in itself is but a form of sluggish thinking and is rather the result of sluggish thought than the reverse. The mind of man is like a garden. From earliest childhood, sow the seeds of right thinking, give the brain something to work on, cultivate and encourage every indication of growth along this line, banish the weeds by encouraging normal growth of the plant. A harvest of good things will be the result. Let it remain a barren waste, neither planting or encouraging growth and weeds will soon spring up and flourish therein.

In the matter of establishing a right mental attitude in children, we have but to suggest and to encourage. It is not to be hoped or expected that they will think as we do. The idea is to encourage them to think for themselves, and to decide matters for themselves after they have been given enough mental stimulus to understand the fundamental truths of life. Your way of thinking and mine are but a stepping stone to the possibilities which now confront the generation following us. To attempt to narrow them down to our way of thinking when they have reached the stage in their mental development where they can see farther and have the courage to go, is like shutting off sunlight and air from the plant

## Champion Buff Wyandottes

(AMERICA'S GREAT GENERAL PURPOSE FOWL)

**Now Ready To Win at Your State Fair  
and the Early Fall Shows**

We have 1,500 **Big, Vigorous** hen hatched **Chicks**, royally bred from our Madison Square Garden, Grand Central Palace, Boston, Chicago, Cincinnati, Indianapolis and Nashville winners. These birds will again be the prominent Victors at America's Great Shows this season, as have their ancestors during the past 25 years.

**We can furnish you Buff Wyandottes guaranteed  
to win at any show on earth**

**We have five hundred early hatched cockerels and pullets that will be easy winners at the State Fairs during September and October**

## Puritan Partridge Rocks

(THE QUALITY FLOCK OF AMERICA)

**All Ready To Go In and Win At Any  
State Fair or Early Fall Show**

1,000 hen hatched Chicks, bred right from First Prize Winners at Madison Square Garden, Chicago, Kansas City, Cincinnati, Indianapolis and Louisville.

**Puritan Partridge Rocks** are certain to be the Big Winners again this year as they were last season.

**Now is the time to secure Partridge Rocks that  
can win first honors anywhere**

**CINCINNATI, OHIO**

when it shows signs of budding. It is our right and privilege to direct the first thoughts and to establish in their minds the facts and positive truths which science and the history of the ages has proven. Thus far may we go and no farther, except as fellow students. If up to this time we have given the brain the right food for thought by implanting the seeds of industry and intellectual discipline and by encouraging hope and fearlessness, the future is safe in their hands.

In the matter of bad habits now formed, it will be found much easier to accomplish the correction of one thing at a time than a number. Likewise the cultivation of a good habit will mean the destruction of a bad one, so the work is not so much fighting down bad habits as it is that of building up good ones. It will require time and patience and much determination, but the continuance along these lines is its own reward, since the tendency towards good is strengthened by each effort in that direction.

If one stops to notice it, it will be seen that most children of school age when seated at a desk or table are very prone to roll over rather than bend—the shoulders being rounded, the chest hollowed and the spinal column almost in the form of a half circle. This habit is a very bad one and much pains should be exercised in correcting it if need be. Teach the children to sit far back in their chairs in an erect position with the shoulders touching the

chair backs, when, if they do move forward for the purpose of writing, eating, etc., they will keep their shoulders square instead of rounded as when sitting wrongly on the chair seat.

It is also an excellent idea to have the children (your own, and their playmates) form in line occasionally, with their arms folded behind their backs, and march about in this position, which means shoulders back and chest expanded.

In the matter of dressing, practically all children love to "dilly dally" during this process, and this is naturally a trying habit for their elders to put up with. Aim to establish a system of rising, dressing and breakfasting in your household with a certain competition among the younger members in the matter of getting dressed first. Do not allow the dressing process to become slipshod, and establish a high standard of well-keptness in the matter of cleanliness, well-kept nails and neatly brushed hair and teeth. Where there are several children "competition is the life of trade" in the formation of these good habits.

If you can thus guide the thoughts of childhood and establish desirable habits at this period of development, you need have no fears for the future of your children. Try each day during this vacation period to give them an inspiration for right thinking. In no other way can we so successfully guide the footsteps of childhood. "As a man thinketh, so is he."

#### Spiced Tomatoes.

By H. V. W. C.

7 pounds ripe tomatoes,  
3 pounds sugar,  
1 quart vinegar,  
½ ounce whole cloves,  
2 ounces stick cinnamon.

After skinning the tomatoes, cut them in slices and drain all the juice from them, add the sugar and vinegar, and the spices which should be tied up together in a thin piece of muslin. Boil until thick and bottle. Very nice to serve with meats.

#### Margaret's Cake.

By M. C.

Sift together 1 cup sugar, 1 cup of flour and 2 teaspoonfuls of baking-

powder. Melt 1 tablespoonful of butter in a cup, add 2 eggs to the butter, a little salt and fill the remainder of the cup with milk. Fold into the sugar and flour mixture, beating for a few minutes. Flavor with vanilla and bake. Cover with a white frosting.

#### Chicken Salad Sandwiches.

By D. S.

Pass the meat of a chicken through a meat grinder and season to taste with salt and pepper. Add also a little olive oil and lemon juice and some minced lettuce leaves. Spread thinly sliced bread with butter and ground nut meats and corresponding slices with the salad mixture and press together. Cut in triangles or other shapes.

#### Creamed New Potatoes.

By D. S.

2 dozen small sized new potatoes,  
1½ pints of milk,  
1 tablespoonful butter,  
1 tablespoonful cornstarch,  
1 teaspoonful salt,

Pepper and minced parsley to taste.

Have the potatoes scraped perfectly with no speck of thin skin on them, boil until tender and drain. For the cream dressing, moisten the cornstarch with a little of the milk, while scalding the rest of the milk over the fire. Add the cornstarch, stirring until slightly thickened and smooth, and place on the back of the stove, adding the seasoning and butter. The sauce should be the consistency of medium thick cream and well seasoned with salt, pepper and parsley. Place the potatoes in the serving dish and pour the sauce over them. Serve at once.

#### Delicious Little Spice Cakes.

By I. S.

¾ cup butter,  
1 cup sugar,  
5 eggs,  
2 tablespoon strong black coffee,  
1 tablespoonful cocoa,  
1 teaspoonful ground cloves and nutmeg mixed,  
1 teaspoonful vanilla,  
¼ teaspoonful salt,  
2 ounces cornstarch,  
1 cup flour,  
1 teaspoonful baking powder.

Cream the butter, add sugar and well-beaten eggs. Then the spices, cocoa and coffee, and sift in the flour and baking powder. Bake in patty pans in a quick oven and frost with a plain boiled frosting or with chocolate fudge frosting.

#### Fudge Frosting.

By I. S.

Boil together 1½ cups granulated sugar, ½ cup sweet milk, 1 teaspoonful cornstarch and 2 tablespoonfuls cocoa or 2 squares chocolate. Butter the sides of the pan well before putting the mixture into it. Place on the stove and allow to come to a boil, but do not stir it. When it forms a mass of bubbles and drops so from the spoon, remove from the fire and add a lump of butter the size of a walnut, beat until it begins to thicken, add a teaspoonful of vanilla and spread quickly over the cakes.

#### WHITE ORPINGTONS

Eggs at one fourth price from Wm. Moore's famous strain. Constant winners at Madison Square Garden New York, for years. Send for catalog and prices. Wm. Moore, Monroe St., Hamilton, Ont., Can.

#### The Unity Poultry Feeder

Feeds dry mash, grain, grit, shell, beef scraps, charcoal, etc., without waste. Fowls can't scratch or scatter food. Feed can't clog or get dirty, and rats can't reach it. Easily suspended from any part of poultry house, occupies little space, but feeds many fowls, and all sizes at once. Easily changed into a sectional feeder. Sent by prepaid parcel post for \$1. or for \$3.25 we'll send you one of our \$2.75 Banglar Alarm Outfits and this \$1.00 feeder prepaid.

UNITY MFG. CO.,  
711 51st St., Milwaukee

## Special Mid-Summer Prices

Are now in effect on our splendidly bred White Plymouth Rocks. The breeding season has passed and we can offer very representative specimens from our yards at extremely attractive prices. Write early and get the opportunity of having the first pick.

#### Maple Farm of Midlothian

Charles D. Ettinger, Proprietor :: Walter A. Cook, Manager  
Box 105 :: Tinley Park, Illinois

## Take Advantage Of This Opportunity!

An offering yearling and 1913 hatched birds that will win anywhere and trap-nested utility Single Comb Black Minorcas at introductory prices. The superiority of our birds as layers of large white eggs—their type, size and quality and our price will encourage you to adopt them exclusively.

CHARLES G. PAPE : Box B74 : FORT WAYNE, INDIANA

# Associations and Shows

*Secretaries are Requested to Send in News Items of Interest About Their Shows for This Department*

## SECOND INTERNATIONAL POULTRY EXPOSITION.

The Second International Poultry Exposition, July 4 to September 1, on Young's Million Dollar Pier, Atlantic City, is a unique project. Conceived and made a creditable reality last summer by the Poultry Item of Sellersville, Pa., it even now seems certain of fulfilling its avowed destiny—that of sounding the death knell of the "dull months" in the poultry industry. This year the invitation to breeders and manufacturers of supplies and appliances met with so generous and so early a response that the sponsors immediately reserved 15,000 extra square feet of space and a large part of this has been taken exclusively by New Jersey poultrymen who have had the co-operation of their State College at New Brunswick, N. J., in making a splendid display, showing what "The Garden State" is doing with and for its chickens.

The annual convention of the American Poultry Association will also be held on the Million Dollar Pier from August 11 to 16, inclusive, and this will bring added prestige and patronage to the exposition, which is directly in the path of all who attend the convention, which will meet in Greek Temple.

Another feature of the event this year is the large booth that has been set aside for the use of poultry associations. In this each association has been permitted to put on display its literature, show dates, etc., without any charge.

The Poultry Item is completing arrangements with the various transportation companies for running excursions to Atlantic City from poultry centers not too far distant from the shore, where strong, organized poultry associations exist. Information as to rates, etc., can be secured by application to local agents at the various cities, and if no excursion has been arranged from your city, the Item will be glad to co-operate in making arrangements, providing a sufficient number are interested.

When it is considered that each space on the pier contains a minimum of fifty square feet and many exhibitors are occupying from two to eight spaces, some idea of the extent of this great uplift to the poultry industry can be formed. Some of those whose displays are attracting widespread attention and the amount of space they are occupying are named below:

John W. Ward, Jr., Pennington, N. J., 1 space.

Parkway Farm, Trenton, N. J., 2 spaces.

Wm. Cook & Sons, Scotch Plains, N. J., 4 spaces, rare and ornamental birds; 4 spaces, Orpingtons and special display.

Sunswick Poultry Farm, Plainfield, N. J., 1 space.

J. C. Punderford, Freneau, N. J., 4 spaces (special display).

Geo. B. Ferris, Grand Rapids, Mich., 3 spaces.

E. B. Thompson, Amenia, N. Y., 4 spaces.

U. R. Fishel, Hope, Ind., 4 spaces (special display).

Wm. H. Moore, Chadds Ford, Pa., 2 spaces.

A. J. Fell, West Point, Pa., 2 spaces.

H. D. Riley, Strafford, Pa., 2 spaces.

Aldrich Poultry Farm, Columbus, O., 4 spaces.

J. Harry Wolsieffer, Vineland, N. J., 1 space.

Dearborn & Sharpe, Blairstown, N. J., 1 space.

Chas. D. Cleveland, Eatontown, N. J., 2 spaces.

Royal Farms, Little Silver, N. J., 2 spaces.

Dunrobin Farm, Chatham, N. J., 2 spaces (special display).

Geo. A. Van Brunt, Red Bank, N. J., 1 space.

New Jersey Experiment Station, New Brunswick, N. J., 4 spaces (special display).

Seaman & Bogert, Port Washington, N. Y., 1 space.

Connor Automatic Feeder Co., Jersey City, N. J., 1 space.

Frederick Feeder Co., Ogontz, Pa., 2 spaces.

M. R. Jacobus, Ridgefield, N. J., 1 space.

R. W. Denner, Sellersville, Pa., 1 space.

Harmony Park, Scotch Plains, N. J., 1 space.

Spratt's Patent, Newark, N. J., 4 spaces (special, 100 feet).

International Poultry Sales Co., Brown's Mills, N. J. (special, 350 feet).

Department of Animal Industry, Washington, D. C., 1 space (special display).

Midlothian Farms, Tinley Park, Ill., 4 spaces.

Lester Tompkins, Concord, Mass., 2 spaces.

### GREAT COLISEUM SHOW—LIST OF JUDGES.

Final arrangements have been completed for the Fifth Annual Exhibition of the Great Mid West Poultry & Pet Stock Association to be held in the Coliseum Building, Chicago, December 12-17, 1913. A lease has been taken on the Coliseum Building giving ample time to get in and to get out. The judging will all be done on Friday, December 12th, the building to be ready for the reception of specimens not later than Wednesday evening, December 10. The show, as usual, will continue over Sunday. The judges selected are:

W. S. Russell, Ottumwa, Iowa, Barred Rocks.  
 O. L. McCord, Danville, Ill., and G. E. Greenwood, Lake Mills, Wis., Orpingtons.  
 J. T. Rountree, Nora, Ill., Polish, Hamburgs and probably Minorcas. The last to be decided by the Club.  
 D. E. Hale, Quincy, Ill., Buff and White Rocks.

James A. Tucker, Concord, Mich., Rhode Island Reds and Houdans.  
 Franklin L. Sewell, Niles, Mich., Langshans.

H. B. Hark, Glenwood, Ohio, Partridge Wyandottes and Partridge Rocks.  
 W. C. Pierce, Indianapolis, Ind., White, Buff, Silver, Golden, Columbian and Black Wyandottes.

A. O. Shilling, Rochester, N. Y., all Bantams and all Campines.

A. C. Smith, Minneapolis, Minn., all Leghorns.

H. A. Pickett, Greentown, Ind., all Turkeys, Water Fowls, Rhode Island Whites and a number of other varieties.

Other judges to be named will depend somewhat upon meetings of specialty clubs.

The famous Empire Coops will be used in all departments, with Barney Mosher in charge of the cooping.

The finest lot of specials ever offered in America will be offered in Chicago this season. Our special representative had instructions when leaving for Europe to buy whatever in his opinion would make the most acceptable and useful premium—something to be won as the very highest honor and something that would be of service to the winner. For this year at least, the silver cups will be eliminated entirely, except those that may be offered by specialty clubs, as we believe that the breeders of this country are ready for something altogether different and Chicago has always led the procession in introducing new and useful features. As usual, every premium offered by this association is guaranteed. The premium list will be ready November 1. Entries close November 25.

 THEO. HEWES, Sec.,  
 Indianapolis, Ind.

### THE BIG BOSTON SHOW.

It hardly seems possible that the great Mechanics Building with its five acres of floor space would have its capacity tested by a poultry show, yet from the present outlook such a thing is likely to happen Boston Show week, January 13 to 17, 1914. Applications for space and premium lists have been coming in for the past two months and already a number of Specialty Clubs have selected Boston for their annual meet; among them The Partridge Wyandotte Club of America, The Silver Penciled Wyandotte Club, The Crested Fowl Breeders' Association and the display of Crested fowls is expected to eclipse anything of its kind ever seen in the world. The American Light Brahma Club and the New England Light Brahma Club will hold a joint meet and there will be a great array of these old favorites. The White Wyandotte Club and the N. E. Golden Wyandotte Club will also meet at the Hub.

Plans are being made for a great show of Plymouth Rocks and the specials will be an eye opener. The utility exhibit last year

30 Broad St., Boston, Mass.

### INTERNATIONAL POULTRY SHOW, BUFFALO, N. Y.

At the monthly meeting of the International Poultry Association held on June 26, Robert Essex and Henry W. Alt were elected members of the board of directors. The executive committee, which will have charge of the great poultry show to be held Thanksgiving week at the Broadway Auditorium, consists of the following well known and experienced poultrymen:

H. A. Rose, Welland, Ontario; Robert Essex, H. W. Alt, H. W. Pottle and Charles H. Felthousen of Buffalo.

The judges engaged to award the prizes are leading experts of the classes assigned to them. The list as far as completed being as follows:

Charles D. Cleveland, Eatontown, N. J.; W. B. Atherton, Boston, Mass.; W. G. Minich, Carlisle, Pa.; George H. Burgott, Lawtons, N. Y.; Wm. McNeil, London, Ont.; L. G. Jarvis, Hamilton, Ont.; W. C. Pierce, Indianapolis, Ind.; J. W. Andrews, Dighton, Mass.; W. C. Denny, A. C. Schilling, F. L. Maunder, Buffalo, N. Y.; W. C. Card, Manchester, Conn., and A. J. Braun, Syracuse, N. Y.

Additional judges including those engaged to award the prizes in the pigeon, pet stock and utility classes will be announced next month.

No exhibition in recent years had attracted the attention of leading poultry breeders more than the one to be held November 25 to 29 at Buffalo, as the men behind the International Poultry Association are influential business men, as well as noted poultry fanciers. The poultry journals of the United States, Canada and England editorially and otherwise commented on the International Show in such favorable terms that a record breaking attendance of birds and exhibitors may be expected.

The officers of the International Poultry Association are: President, Jas. C. Moore, Buffalo, N. Y.; Vice President, H. A. Rose, Welland, Ontario, Can.; Treasurer, H. W. Pottle, Buffalo, N. Y.; secretary, J. H. Drenstedt, Buffalo, N. Y.

Directors: George Urban, Jr., Jos. Russell, L. H. Rown, John S. Martin, H. A. Forman, R. H. Sidway, Wm. F. Wendt, Chas. H. Felthousen, Wm. Hurley, H. W. Alt, and Robert Essex.

### A NEW POULTRY ASSOCIATION IN ST. LOUIS.

The Mississippi Valley Poultry Association has been organized with a capital of \$5,000.00. It will be the aim of this association to hold the biggest and best show ever held in the West. Spratts Patent will coop the show. The big Coliseum will be the place. The judges the best. Catalogues plain and marked. Date, Thanksgiving week, November 25 to December 1. Officers: E. W. Grove, Jr., president; W. W. Henderson, vice president; Henry Steinmesch, secretary-treasurer; W. O. Chase, Hillsboro, Ill., superintendent. Premium list ready September 15. Address all communications to Henry Steinmesch, secretary, 220 Market street, St. Louis.

### JUDGES FOR GREATER NEW YORK FAIR SHOWS—AUGUST, 1913.

Superintendent John A. Murkin of the Greater New York Fair and Exposition shows, scheduled for August 1913, announces the following judges: J. H. Drenstedt, Chas. D. Cleveland, J. Harry Wolsiger, W. H. Card, H. C. Dipple, G. D. Tilley, H. P. Clarke, Arthur O. Schilling, Geo. L. Young, W. J. Stanton and Geo. Ewald. Several other judges will likely be appointed later. Mr. Chas. Pape of Fort Wayne, Ind., has been appointed assistant superintendent. Applications for premium lists are coming in from all over the country and the Greater New York Fair Shows promise to eclipse anything of the kind ever held in the United States. For information, premium lists, entry blanks, etc., address John A. Murkin, Superintendent Poultry Dept., Heidelberg Bldg., Broadway and 42nd St., New York City.

Essex County Poultry Association will hold its next annual show December 4-6, 1913, at Caldwell, N. J. M. J. Stanton, J. H. Wolseffer and Chas. Nixon, judges. M. Spelden, secretary.

**Don't Be Fooled by Cheap Prices** but send to G. B. Smith & Son and get eggs to hatch from their big birds, that lay them big and a lot of them. 3 pens of each, Black and White Minorcas. G. B. SMITH & SON, Box 454, North Baltimore, Ohio

Citizen's 1st National Bank Building

**OKLAHOMA STATE FAIR.**

The greatest display of fine bred poultry that has ever been collected in the Southwest, will be seen at the Seventh Annual Oklahoma State Fair & Exposition at Oklahoma City, September 23 to October 4, 1913. The country is full of poultry and a large percentage of it is pure-bred. Thousands of show specimens are now being conditioned for the Oklahoma State Fair and Exposition.

For the last three years there has been a remarkable increase in the number of good birds shown by Oklahoma breeders, and this year, from all appearances, there will be a greater number than ever before. This statement is made in face of the fact that there were ninety-four exhibitors in 1912 with eleven hundred and forty-seven entries.

"With the most up-to-date pavilion in the Southwest and the most enthusiastic bunch of breeders ever banded together," says John W. Niceley, superintendent of Poultry, "you may expect a revelation in the 1913 exhibits."

For the breeder of prize birds, the Oklahoma State Fair and Exposition at Oklahoma City, September 23 to October 4, 1913, is the greatest school in which to study quality in any person's chosen breed. There are to be seen the birds which come the nearest to the standard in fine points and desirable qualities. There is an opportunity to study the very best for comparison.

"Every breeder who aspires to the ownership of winning birds should exhibit at least a few birds and spend a day, if possible, in the pavilion studying and comparing the qualities of his birds as compared with others," says John W. Niceley, superintendent of the Poultry at the Oklahoma State Fair. "The judge will take pleasure in pointing out any defects in your birds, if there are any, and show you where you can improve them."

It is also pointed out by Supt. Niceley that every breeder who has stock and eggs to sell should exhibit at least a few to show the intended purchaser the quality of the stock he sells from. Many sales of birds have their inception at the Oklahoma State Fair and Exposition.

The management of the Oklahoma State Fair and Exposition has taken another step forward this year to assist the actual breeder of fancy poultry. It is the rule this season that it takes three specimens to fill a class, to win first money. The three specimens may be exhibited by one breeder or by three breeders.

**MISSOURI STATE FAIR.**

The poultry department of the State Fair will be one of the big events of the 1913 exhibition. The poultry building is substantial: it is brick and iron construction, with a tile roof, large and roomy, and is fully equipped with uniform coops that are furnished by the fair.

No entry fee is charged but there is a small coop rent. Premiums are large. One of the features will be a demonstration of the work that is being done by the Missouri State Poultry Board at Mountain Grove, Mo. Mr. T. E. Quisenberry, director of the Station, will be personally in charge of this exhibit.

Mr. Henry Steinmesch, St. Louis, Mo., is the director in charge of the poultry department.

In addition to the regular classification offered a special egg laying contest will be held. This will cover a period of one week.

Premium lists are ready for distribution and may be had by addressing secretary of the Missouri State Fair, Sedalia, Mo.

Fair will be held September 27 to October 3, 1913, at Sedalia, Mo.

**ARKANSAS STATE FAIR.**

Poultry raisers and fanciers throughout Arkansas and the entire country for that matter, will be gratified to learn that the Arkansas State Fair management has chosen for superintendent of the poultry department for the 1913 fair, Mr. Orlando C. Williams, one of the most enthusiastic poultry breeders and exhibitors in the entire South.

Every former exhibitor at the fair will recall Mr. Williams, who was always prominently identified with the poultry exhibit. He has recently organized the Garland County Poultry Association, and has been elected secretary of the organization, which means that he will bend his energies to the interest of poultry fanciers of his own county in breeding and exhibiting at the fair. It is his purpose to foster like organizations in practically all the counties of the state, with the central interest in the big Arkansas State Fair.

Mr. Williams invites every poultry raiser

and fancier in the State of Arkansas and all other southern states, as well as those of the north, east and west to correspond with him with reference to the 1913 State Fair Exhibit which he promises to make the greatest ever held in the state.

All letters of inquiry and requests for information and blanks will receive prompt and accurate attention.

Fair to be held October 27 to November 1, 1913, at Hot Springs, Ark.

### THE FOREST CITY FAIR.

America's leading and best poultry judges will do the judging in the poultry department of the Forest City Fair, Cleveland, Ohio, (grounds North Randall), which will be held six days and nights the week of August 25th. The premiums offered amount to \$3,000.

Spratt's Patent will coop and feed the show. This will be free to exhibitors. Entrance fee on single birds is twenty-five cents and on breeding pens is fifty cents.

In thirty-four varieties, the premiums in the single bird classes are: First, \$3; second, \$2; and third, \$1. Breeding pens: First, \$5; second, \$3; and third, \$2.

In fifteen varieties, single bird classes: First premium, \$3; second, \$1. Breeding pens: First, \$4; second, \$2.

In forty-one varieties, single bird classes: First premium, \$3; second, \$1.

In thirty-seven varieties, single bird classes: First premium, \$2; second, \$1.

A liberal classification is provided and liberal premiums are offered in the other varieties of poultry as well as pet stock and pigeons. This will be the biggest mid-summer poultry show Ohio has ever seen.

Mr. Shepard Strong of Cleveland, Ohio, a well known and experienced poultry fancier will have charge of the show.

A postal card request will get a premium list. Write H. J. Kline, General Manager, 1050 Leader-News Bldg., Cleveland, Ohio.

Western Fair Association, London, Ont., September 5-13, A. M. Hunt.

Wyoming State Fair, Douglas, September 30-October 3, Anson Highby.

### THE GREAT WILLIAMSPORT SHOW.

The Great Williamsport Poultry Show will be held as usual Thanksgiving week, November 25 to 28 inclusive.

This greatest of all early shows will be greater than ever in every respect.

Williamsport has been noted for the judges it employs but this year is going still better and have engaged Messrs. Henry P. Schwab, Richard Oke, Chas. Nixon, J. C. Pufferford and Herman Sonder and we don't know where the poultrymen will find a better list of judges in this country.

While some of the old timers in the show business management have dropped out, the new blood will try to show the exhibitors that they will have no reason for complaint.

The officers who are guiding the affairs of the Williamsport Show this year are: Chas. Drinkwater, President; John R. Heim, Vice President; McCormick Dawson, Secretary; E. N. Crumbling, Treasurer; Chas. G. Whitehead, superintendent; A. A. Swartz and Chas. D. Lamade, board of directors. McCormick Dawson, Secy.

Williamsport, Pa.

The eighth annual exhibition of the Genesee Valley Poultry and Pigeon Association will be held December 29, 1913, to January 3, 1914, at Rochester, N. Y. W. Theo. Wittman, Herman W. Graunis, Henry R. Ingalls, M. Frank Cook, F. H. Taylor, G. Archie Turner, A. J. Braun and W. J. Wirt, judges. F. A. Newman, secretary, P. O. Box 472, Rochester, N. Y.

**DR. GUY BLENCOE**  
 Alma Center, Wis.

## Day-Old Chicks

### S. C. W. Leghorns

When ordering your chicks for 1914, remember the poultry farm that gives satisfaction. Letters from our customers will convince you. Book your orders early. Mention A. P. J.  
**Michigan Poultry Farm**  
 Lansing, Mich.

## Pagel Non-Freezing Drinking Fountains

When the time comes to provide water for your fowls in zero weather, you cannot afford to take chances on the average water receptacle, that will freeze up just at the critical time.

You want the best, most satisfactory, most reliable drinking fountain you can get. Perfectly

constructed, works right under any and all reasonable conditions. Inquire at your dealers, take no substitute, or write for prices and descriptive literature. Mention A. P. J.

**PAGEL POULTRY SUPPLY CO.**  
 Lock Box 211 Rockford, Illinois

## Cochin Bantams

**Black-Buff-Partridge-White**

We wish to state that we have scientifically bred the 4 Varieties of Cochin Bantams exclusively for many years and our strain has proven its exhibition quality throughout U. S. Not only when exhibited by us, but many of our customers have reported marvelous victories (at such shows as Rochester, Pitts-

burgh, Pasadena and many other renowned shows), which were accomplished with specimens of our strain. Therefore

**The Real Cochin Bantams**  
**America's Best Cochin Bantams**  
 are bred in Ohio at the Wahebe Bantam Yards and such quality cannot be found anywhere else on this great continent. If it is your intention to win this season and to breed winners write the Home of America's Best Cochin Bantams, or you will be disappointed in your undertakings.

**Wahebe Bantam Yards**  
 Box 13B, Evanston Station Cincinnati, Ohio

**BUFF WYANDOTTE BREEDERS.**

At the annual meeting of the American Buff Wyandotte Club, held at Toledo, O., January 8, 1913, the following officers were elected:

President—Arthur H. Myers, 169 Columbus Heights, Brooklyn, N. Y.  
 Canadian Vice President—F. P. Spy, 144 Dundas street, Toronto, Canada.  
 Eastern Vice President—J. E. Burt, Athol, Mass.

Western Vice President—Henry Hess, Winona, Minn.

Southern Vice President—J. C. Green, Gadsden, Ala.

Members of Executive Committee—Gerald Williams, Northfield, O.; S. A. Howland, Granville, N. Y. and W. J. Hoebel, Blairstown, Ia.

Secretary Treasurer—F. W. Hoff, Toledo, Ohio.

Because of the illness in his family and a change in his business, Mr. Hoff was unable to attend to the duties of secretary-treasurer and the executive committee appointed J. E. Willmarth, Amityville, N. Y., secretary-treasurer for the balance of Mr. Hoff's term.

At the annual meeting the By-Laws were changed to admit of the election of our officers by mail vote. Now every member has an equal chance to say who shall be our officials and where we shall hold the annual meetings.

Every breeder of Buff Wyandottes should be a member of the American Buff Wyandotte Club. One dollar pays membership fee and first year's dues, and all who join now will be credited with a paid up membership to October 1, 1914.

Write for application blank and any further information you may desire to J. E. Willmarth, secretary, Amityville, N. Y.

## NEW YORK STATE BRANCH ELECTION.

The election of the New York State Branch of the American Poultry Association, which closed July 15, resulted in the following officers being elected:

President, Robert H. Essex, Buffalo, N. Y.; vice president, B. W. Mosher, Johnstown, N. Y.; secretary-treasurer, L. D. Howell, Mineola, N. Y.

Executive board for three years—D. M. Green, Waterville, N. Y.; H. P. Schwab, Irondequoit, N. Y.; Clyde H. Proper, Schenectady, N. Y.

Executive board for two years—Newton Cosh, Napanoch, N. Y.; Geo. E. Underhill, Fort Ann, N. Y.; Irving F. Rice, Cortland, N. Y.

Executive board for one year—Mrs. Mary E. Monroe, Dryden, N. Y.; L. H. Bown, East Aurora, N. Y.; W. R. Curtis, Ramonville, N. Y.

Delegate to annual meeting of the A. P. A. Robt. H. Essex, Buffalo. Alternate to annual meeting of the A. P. A. Dr. S. A. Merkley, Buffalo, N. Y.

## ANNOUNCEMENT.

Secretary Jas. J. Long of the St. Louis Poultry, Pigeon and Pet Stock Association, Inc., (member of the American Poultry Association), announces that the association will hold its annual show in St. Louis, Thanksgiving week, November 24 to November 29, inclusive, 1913.

For the enlightenment of the public, we wish to announce that the above organization was the one which gave the great show of November 1911, which was conceded by the Poultry Press to be the finest ever given in the city of St. Louis and the best managed show in the United States. This organization is incorporated under the laws of Missouri and represents a membership of over seventy-five of the best breeders of fancy poultry in this locality. We hold an enviable record in regard to honesty and of payment of prizes. A complete list of the judging staff will be announced later. For further information regarding the exhibit, space and premium list, ad-

The Paterson, New Jersey Poultry, Pigeon and Pet Stock Association will hold its annual show November 19-22, 1913, at Paterson, New Jersey. Dr. Gilbert Johnston, secretary.

Just what poultrymen were looking for this long time. A new invention to get Winter eggs and raise chicks successfully. Patent granted March 26, 1913. Write for circular (free). Tells you all about it.

Old Honesty Heater Co., Dept. A, New Washington, Ohio

**S. C. BUFF AND WHITE LEGHORNS.**

For completeness and exaction in plant and breeding the Monmouth Farms, at Freneau, N. J., are today one of the largest and best we have ever visited. From a small beginning this plant has grown year by year under the watchful eye of Mr. Punderford, until covering as it now does about 40 acres and is one of the plants we can point to with pride, that has been a money-making success from the first.

Personal care and watchful study of details, along with the highest possible grade of stock, stand for progress and, combined with proper publicity, assure the breeder the desired results. Mr. Punderford believes it is up to the man, and to our notion has amply proven this correct, for he who will but try can find pleasure and profit in poultry keeping.

At the time of our last visit to this plant early in the spring Mr. Punderford had hatched and growing upwards of two thousand youngsters, with many crowing at that time. There were both Buff and White Leghorns weighing close to two pounds, and a more promising lot is hard to imagine. In quality they were a real revelation. The Buffs sound in a rich Golden Buff, of good bone, and most promising head points; the full feathered tails, carried low, being a pronounced feature. The Whites are also desirable and full of promise, perfectly sound and well carried. Of the breeding stock we wrote at that time.

In a letter Mr. Punderford informs us that those young ones have kept every promise of their quality; that they are "great" and that he is better than ever before prepared to supply all demands made on him for early hatched and matured exhibition and choice breeding birds. The early shows are upon us now and if you wish to win and make a start for better poultry, here is your opportunity. Mr. Punderford will do just as he agrees for you.

This line by its great winning at Madison Square Garden (New York) and other shows, and by its value as a breeding line, is most favorably known. In Buff it has, without question, led all for years and years, and in Whites it has made rapid strides and has won its place of superior quality at leading exhibitions. Along with their exhibition quality they have a breeding worth that should be well considered, the faculty of reproducing being one of special value and one you will find in this line to an exceptional degree.

We have pleasant memories of our several visits to this plant with its ivy-covered office, the privet hedges, the clean, roomy houses, the ideal brooder houses, the large yards and the grassy ranges through the wood for the youngsters. All is in harmony and all points to the possibilities of successful poultry keeping. —H. P. Schwab.

**OPENS NEW BRANCH.**

In accordance with its long established policy of business expansion, the H. W. Johns-Manville Company has recently opened a branch office at Charlotte, N. C. The new office, which is located in the Commercial Bank building, is in charge of Mr. E. C. Heslop, who is assisted in covering the western section of North Carolina by Mr. P. J. McCusker and Mr. Paul W. Whitlock.

**INCUBATOR PATENT SUIT DECIDED.**

The court decides that the Newtown incubator does not infringe the patent of the Hall Mammoth Incubator Company.

An interesting decision was handed down on June 5th by Judge Ray of the United States District Court of the Northern District of New York, at Utica, in the suit which had been begun a year or two ago by the Hall Mammoth Incubator Company against a customer of the Newtown Producing Company named Charles Teabout, charging that the Newtown heater infringes upon the Hall patent owned by the Hall Mammoth Incubator Company. This suit was widely advertised by the Hall company, and a decision has been awaited with interest by the trade. The suit came to a final hearing, and the question at issue was that which had been fully discussed by the patent experts who testified upon both sides of the case, namely, Does the Newtown heater infringe the Hall patent? After a very full consideration of the whole subject and many quotations from the testimony, Judge Ray has decided that there is no infringement.

The opinion consists of twenty-three

printed pages and is too long to reproduce in full. It concludes with the statement that "Defendant has a combination which does not infringe the patent in suit," and orders the bill of complaint which had been filed by the Hall company to be dismissed with costs.

This will be interesting news to those who have purchased the Newtown incubator and who may have been threatened by the Hall company with infringement proceedings, as it may be taken as an assurance that such customers will not be subjected to any such infringement suits.

### THE GROVE CHALLENGE TROPHY.

This magnificent trophy was constructed at a cost of over \$500 and is the most expensive prize ever offered at any poultry show. It was donated by E. W. Grove, Jr., to the National Single Comb White Leghorn Club for annual competition, and was awarded to Eugene C. Smith, 317 Galena Boulevard, Aurora, Ill., for winning the largest number of points at the national meet of this club, held in connection with the St. Louis show, in November, 1912—the first time in the history of the club that the national meet was ever held outside of the Madison Square Garden Show, New York.

Mr. Smith advises us that this year he has the finest lot of young stock that he has ever raised, and they will be in prime condition for the fall and winter shows. His booklet is one of the neatest we have ever seen and will be sent free upon request by addressing him as above.

### FIRE SALE.

Upon the afternoon of June 17, at 3:30 o'clock, lightning struck our conditioning room and destroyed by fire the above, our office, our 6,000-egg incubator, our continuous brooder house, nearly all our letter files, office furniture, etc., in all a loss of about \$3,500, only half covered by insurance.

We were fortunate to have all our young chicks in colony houses and our incubator had been closed for about ten days, and we only lost about fifteen cock birds in the way of stock.

It has been our policy to put back into our business all our profit, and such a loss necessarily leaves us without sufficient funds to rebuild. To this end we are going to offer our customers and the Black Orpington loving public at large some very special prices on all our stock during the month of August.—Carl J. Carter, proprietor Blue Ribbon Poultry Farm, Columbus, Ind.

We desire to call attention to the special sale of Rose Comb Reds now being held by Simmons & Crittenden, Geneva, Ohio. They are offering some fine breeders at extremely low prices. The Reds they offer are from their breeding pen of this season and are bred in the same line as their winners at Pittsburgh, Chicago, Boston and Cleveland. You will make no mistake in writing them and taking advantage of this splendid offer.

### 2 - LEADERS - 2

Eaton's Climax Grain Mixture and Eaton's Perfection Mash

CHARLES G. PAPE - BOX B74 - FORT WAYNE, INDIANA

## GRIMM'S CONVERTABLE BROODERS

The roomiest steel brooder made. The wood bottoms are chemically treated which makes them immune from lice, mites, and rats will not gnaw them. Vermin proof. Write for our circulars and read what many satisfied users say.

\$1.85 without yard, \$2.50 with yard, Hovers 50 cents. Heaters \$1.50 complete (top heat) Makes a safe place for the setting hen.

10 square feet of floor space in brooder and yard. Size of brooder 2½ feet long, 2 feet wide and 18 inches high. Yard same size. They are built for continuous service, are lightweight, dry, strong, large, well ventilated, easily cleaned and kept clean. Saves time, saves money, saves troubles and saves the chicks.

G. F. GRIMM MANUFACTURING CO.  
517 West Main Street Atchison, Kansas

## THE O. K. SANITARY DRINKING FOUNTAIN

Well made of galvanized steel throughout. The pan from which the fowls drink is seamless, being stamped up from a disc of sheet steel, and galvanized after stamping—this makes it most durable. The water is poured in at the top the same as into a pail, and the detachable valve, which can be removed and replaced instantly, makes the O. K. Fountain the easiest to keep clean, and consequently most sanitary. The double wall construction keeps water cool and fresh in summer, and prevents freezing in winter. Made in three sizes for chicks and fowls. Let us send you our catalogue No. B-20 which gives complete description of these drinking fountains, and several other new labor-saving poultry yard devices. Mention American Poultry Journal.

TRADE MARK

Cheaper and much better than straw, clover, alfalfa, sawdust, shavings or anything else ever thought of for litter.

### "O. K." Keeps the Poultry Houses Clean, Dry and Sweet without Once Cleaning Out

One lot of "O. K." Litter lasts until the chicks have outgrown the brooder. In coops, laying houses, colony houses and scratching pens "O. K." Litter dries up the droppings so that the house is always dry, clean, sweet-smelling and sanitary, and needs cleaning out only once in four or five months. A tremendous saver of time and money.

### WRITE TO-DAY FOR FREE SAMPLE

"O. K." Litter will not burn. Lice will not come where it is used. Tell us how many hens and chicks you keep—we will tell you how much "O. K." Litter you need. Write New York for free sample and printed matter.

**O. K. COMPANY, Dept. 173, 157 Water Street, New York City**  
Direct shipments also from Chicago and New Orleans.

## THE NECESSITY OF USING A TYPEWRITER.

Today a typewriter is absolutely essential in writing business letters of any nature. It is an injustice to any business man or business house to correspond with them in long hand.

Even though you write only one or two business letters a week, these letters should be typewritten. We all now-a-days have lost the ability to write in the beautiful flowing copper plate style of writing of our grandfathers and the modern hand written letter is responsible for an enormous number of mistakes of all kinds; some of them costing far more than the price of a typewriter.

Most people, even completely recognizing the fact, that business correspondence should be typewritten, find that an expense of One Hundred Dollars for a typewriter is beyond their reach. Even though they realize that it is expensive and undignified to try to get along without one.

There is an enormous demand today for a thoroughly reliable and satisfactory typewriter, at a price within the reach of the man having even only one or two letters a week to write, and Harry A. Smith, realizing this demand for a machine that can be relied on to do perfect work and give satisfactory service, is offering in this issue a typewriter that will write a clean cut and perfect letter and stand up under the hardest kind of usage, at a price making it possible for everyone to enjoy this convenience and business necessity.

We have a communication from Herbert H. Knapp, secretary and general manager of the Co-operative Breeding & Hatching Company, of Tiro, Ohio, in which he states that they are having a most successful season shipping day-old chicks, having delivered 150,000 since March 1, with the demand still continuing. They still have 28,000 eggs in the machines and expect to hatch as long as they can get fertile eggs, which will be about October 1. Mr. Knapp also states that his company has been unable to supply the enormous demand they have had for their "Better Hatched" chicks, which he believes is due to their superior system of hatching and the special attention given to each individual order, large or small. It is the customers that come back that count, and the Co-operative Breeding & Hatching Company now have a clientele that take their output as fast as it can be produced. If you wish to tie up to a reliable firm of baby chick men don't overlook this successful company. Their ad appears on another page. Their August and September prices are very low. Look for the stork trade-mark.

The Automatic Sanitary Trap Nest Company, of Duluth, Minn., have just issued a new booklet full of information concerning the great benefits to be derived from trap-nesting. It tells what all the leading poultry journals say, what all the leading breeders say, and what the big advertisers have to say about the necessity of trap-nesting and trap-nest advertising. The automatic sanitary trap nest does away with all care, labor and loss of time, no watching for the hen to enter the nest, no waiting for her to lay, no removal of the hen, no resetting of the nest—in fact, there is nothing to do but gather the eggs. Every poultryman should have a copy of the booklet. It is free for the asking. Address Automatic Sanitary Trap Nest Co., Duluth, Minn.

On another page will be found an advertisement for the International Poultry School of Detroit, Mich. This school is presided over by the officers of the International Accounts Society, which is the oldest and most successful correspondence school of its kind in America. The course they have issued is practical and thorough. It consists of seventeen distinct lessons, in addition to text books, and is not a reading course, but one that requires study coupled with written examinations. They have issued at a great expense a handsome booklet entitled "Poultry Culture," which will be sent free to any one who is interested in this business, entailing no obligation. Ask for booklet "H." Their address is Box 98, Detroit, Mich.

Parkway Farm, Trenton, N. J., breeders of Silver Penciled Plymouth Rocks, S. C. White Leghorns, Partridge Plymouth Rocks and Silver Campines, inform us that they have 10,000 young birds on range and are in a position to furnish pullets and cockerels for the early fall and winter shows. Write them for full particulars.

## GET READY

Buy coops now for county and state fairs. We make training and exhibition coops, brood, setting and colony coops, fireless brooders, portable hen houses, trappings, portable fences and runways, collapsible show coops to coop poultry shows, etc. We will be at the state fair, Springfield, Illinois; don't fail to see us there. Write now for catalogue, it is free. Mention American Poultry Journal. Address

Niemann Bros. Mfg. Co., Box 677, Mt. Olive, Ill.

## Don't Build

YOU can buy better, cheaper, more complete ready (factory) made hen-houses, roosting and nesting fixtures, coops, etc., from Potter & Co., because they buy lumber in carloads, cut and fit all parts perfectly by automatic machinery and deliver the house, coop or fixture you need in convenient sections all ready to set up.

### Potter Poultry Houses and Fixtures

**FEED**

**More Phosphorus and Less Protein!**

**"Hen-o-la" Dry Mash**

Fed in conjunction with

**"Hen-e-ta" and "Succulenta"**

**Requires Absolutely Nothing Else**

Because the three make a complete balanced ration, rich in phosphorus.

**The Lack of Stamina and Vitality**

In the birds is the cause of 95% of the failures in the poultry business. Therefore see to it that you are one of the successful 5% this year by putting your birds on this economical scientific *horse sense* system that produces Stamina and Vitality; convince yourself by giving it a thorough trial.

Let us send you report from a leading experiment station that has fed 31,500 lbs. "Hen-e-ta" during the past four years, and is still feeding same.

The above system makes poultry-keeping wonderfully simple and cheap.

If your dealer will not supply you, please write us for full information and prices on "Hen-e-ta," "Hen-o-la" Dry Mash and "Succulenta" tablets—green food substitute.

Valuable Booklets Free

This is done to introduce their line of goods and in an advertising way only, and is offered as an introductory. Readers should take advantage of same at once.

**LICENE KILLS THE LICE.**

When other lice-killers fail, try Licene; it does the work every time. Send to the Licene Co., Pontiac Bldg., Chicago, Ill., 50c and they will send you enough Licene for 200 birds. Read this testimonial:

Wall Walla, Wash., May 19, 1913.

Gentlemen: I have given Licene a thorough test this spring. I want to say right here that the breeder who has 100 or more birds in the breeding yards must certainly appreciate the time, worry and work saved when he can go out and in two hours' time treat every fowl and know that the lice troubles are over for the season sounds too good to be true, but I can testify to it now—I have made a 50c box of Licene destroy more lice than \$5.00 worth of lice powder would do and did not lose my temper and sneeze my head off while applying it either. I am yours kindly, **W. S. Cotten.**

**A 3-MONTH TRIAL SUBSCRIPTION**

To Reliable Poultry Journal, only 10 cents. Stamps are acceptable. Or, send for free sample copy of the most helpful poultry paper published. Address Reliable Poultry Journal Pub. Co., Box E-13, Quincy, Ill.

**A FREE SAMPLE COPY**

Of the Reliable Poultry Journal, one of the most practical and helpful poultry papers published, will be mailed upon receipt of a postal card request.

A 3-months' trial subscription will cost you only ten cents. Stamps are acceptable. Address Reliable Poultry Journal Pub. Co., Box E-13, Quincy, Ill.

Careful, competent and continuous culling is a very important and much neglected factor in poultry keeping. It is easy to detect and weed out runts and ailing birds by sight, but healthy hens that do not lay often enough to be profitable are not so easily discovered. "Ideal" trap nests, properly installed and used, show which hens lay and how well they lay more positively and with less expenditure of time than is possible by any known scheme of physical examination. The "Ideal" is the invention of Mr. F. O. Wellcome, Box J, Yarmouth, Maine. A postal thus addressed will bring free information and prices to those of our readers who wish to "Idealize" their flocks.

Park Poultry Yards, (Glendale) Nashville, Tenn., breeders of S. C. White Orpingtons and Partridge Plymouth Rocks, are offering some high-class early exhibition birds for sale that are bred from last season's prize winners. These birds were hatched early and are now up to standard requirements. They are bred to win and will win in the hottest competition. Write for prices on what you want.

Maurice F. Delano, successor to Owen Farms, Vineyard Haven, Mass., is now prepared to furnish either young or old birds to win at any fall fair or winter show. This farm has for a number of years made a specialty of furnishing winners at most all the leading shows—in Buff, White and Black Orpingtons, White Plymouth Rocks, White Wyandottes and S. C. Reds. Look up the ad of this farm in this issue and write for full particulars.

Mr. Carl J. Carter, senior partner of the Blue Ribbon Poultry Farm, announces himself as a candidate for election commissioner of the American Poultry Association, subject to the convention at Atlantic City this month.

# CLASSIFIED ADS

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and five cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

Box 115 A Rahway, N. J.

## Get Acquainted

Modern advertisers rightfully expect the publications in which they buy space to guarantee and prove the circulation of each and every issue. Certain such papers are known as the Progressive Poultry Papers.

Each publisher of such paper is progressively striving to furnish their readers with live, scientific, up-to-date reading matter and agrees to prove his circulation, promote and protect the advertisers interests by refusing objectionable advertising. It will pay advertisers to get acquainted with these papers. For list of papers, rates and circulation information address

## AT HALF PRICE Parks' BRED-TO-LAY BARRED PLYMOUTH ROCKS

The oldest and greatest laying strain of today with over 23 years of careful selecting and trapnesting for eggs back of them, and in order to make room for the young stock coming on will sell my best breeders at half price during August only. This will be the chance for the great number that got disappointed last Spring by coming too late for breeders, as well as the chance for the one with small means to get started with a small outlay. Write, will quote you fully. Large 36-page catalog FREE.

J. W. PARKS Box J ALTOONA, PA.

## THE WHITE ORPINGTON SALE

C. L. CUNNINGHAM & SON

Are making special prices on their yearling hens. If you are in the market for first class birds they have them out of their St. Louis and Memphis winners. Eggs are going at a very low price, almost the cost of production. If you are needing any choice breeding stock now is your opportunity. Write them at

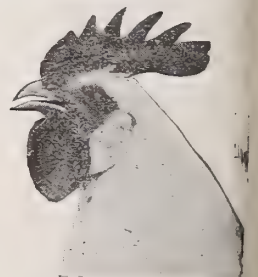

CARUTHERSVILLE MISSOURI

Your Choice of

10,000

Ferris Leghorns

## 30% Less Than Actual Value

We raised 10,000 Improved White Leghorns this spring and you can get your pick of thousands of February and March hatched cockerels and pullets at 30% less than regular prices. These birds show splendid development, and they have the low, well spread tails, good heads, with white earlobes and smooth, evenly serrated combs, typical shape in all sections, with long backs and full breasts, and snow white plumage that you must have in order to win. We have been breeding winners for the largest shows for many years. We can furnish you with stock that we will guarantee to win at any fair or show where you want to exhibit. Ferris Leghorns are trapnested and will lay 175 or more eggs a year. We have been breeding them for egg production for more than 12 years. We ship on approval and insure all birds for 30 days. If they get out of condition we stand the loss. Utility cockerels from \$2.00 up, pullets and hens from \$1.75 up. We have a number of very choice breeding birds to spare that we have used in our best matings. Write us for further particulars; we will be glad to tell you just what we have. The summer prices make it worth your while to buy now even if you do not need the stock until winter. Males that will then cost you \$10.00 cost only \$7.00 now; the \$15.00 exhibition birds only \$10.50.

## Our Mammoth 132 Page Catalog is Free

It contains a lot of valuable information and will tell you all about White Leghorns and why they are best. Just write a postal today and let us send it and quote prices. Breed Ferris Leghorns and you will have eggs all next winter and can win whenever you want to exhibit. Take advantage of this summer sale and it will cost you very little to get a splendid start.

GEO. B. FERRIS--The Ferris Leghorn Farm

905 Union Avenue, Grand Rapids, Michigan

Our \$2,000 Male

Winner of First Prize and Sweepstakes Special at New York's Greatest Barred Plymouth Rock show, nearly 500 line. Sons were Winners in several shows, including New York and Boston.

## WHAT EXPERTS THINK OF IT

### "Most Complete and Comprehensive"

Gentlemen: Your 1913 Year Book received and carefully inspected. We find it to be a most complete and comprehensive work. Very truly yours, Leo. T. Robinson, Editor Nat. Barred Rock Journal, Union City, Mich.

Dear Sir: I am satisfied you have succeeded in giving to the public a book of permanent value, one that the editors and artists should be proud of. The Year Book is a welcome addition to our poultry literature. Yours truly, J. H. Drevenstedt, Editor American Poultry World, Buffalo, N. Y.

Gentlemen: You certainly deserve great credit for publishing such an excellent Year Book. Judging by its merits, it should meet with great success. Sincerely yours, A. G. Studier, Editor R. I. Red Journal, Waverly, Ia.

## 11 Four Color Pictures

The American Poultry Journal Year Book for 1913 contains eleven four-color pictures of fowls made by the famous poultry artist, Louis A. Stahmer. Three of these pictures are double-page in size (6½ by 9½ inches, each showing one male and four females) and they were all made from life by the new four-color photo engraving process. Eight of these colored pictures are mounted on heavy tan paper and are suitable for framing. These beautiful pictures have created a sensation wherever seen as they represent the highest type of thoroughbred fowls and they are beyond question the most beautiful and artistic set of exquisite pictures of pure-bred poultry ever published. To appreciate these pictures they must be seen, as it is almost impossible to find words strong enough to describe their natural beauty and artistic background taken from nature's scenery, with its charming hues and tints of the glorious rainbow.

## "MENDELISM AND THE LAWS OF HEREDITY,"

By Rev. F. W. Sturgus, M. A., of England, occupies 36 pages of the Year Book and is undoubtedly the best exposition of Mendelism and the laws of heredity in relation to poultry breeding that has yet been published and is worthy of deep study by our American breeders. This one article by this noted authority, is worth many times the price of the book to every breeder of fancy poultry.

## "The Poultryman's Encyclopedia"

is one of the big features of the book, giving a complete description of 29 common diseases of fowls, their causes and cures, explanation of all technical terms used in the poultry industry, and also treating briefly but fully such subjects as How to preserve eggs, Making feeding sprouted oats, Soft-shelled eggs, Right size of poultry house, Broilers, Broken legs, Curing broody hens, Care of setting hen, Capons, How to stop cock crowing at night, Cockerel and pullet breeding, Double and single mating, Color feeding, Colony houses, Contents of eggs, Copulation, Fate fattening, Dust bath, Egg bound, Egg and feather eating, Feed for fattening, Grit, Flavor of eggs, Incubators and cellars, Influence of the sexes, Insect pests, Killing and dressing poultry, Mash feeding, Molt, Nests, Perches, Scratching sheds, Sitters and non-sitters, Telling the sex, Removing spurs, Watering devices, Ventilating houses, How to give medicine, Scaly legs, etc. All the above and many more items are arranged alphabetically for instant reference, making it truly a Poultryman's Encyclopedia.

## Printing and Binding

The Year Book is printed on high grade enameled book paper and the binding is linen thread sewed to make it flat opening. There is nothing cheap or trashy about the book as no expense was spared to make it a representative of the best present day standard of artistic printing and worthy to be handed down to posterity as an example of what the best printer could produce in the year of 1913.

No book of this kind has ever been presented to the American public before. Think of it 379 pages, 11 colored illustrations, the best articles that money could buy, on the most helpful subjects, and complete show reports for 1912-13.

Prices—\$1.00 for the de luxe cloth bound edition and 50c for the paper bound edition, express prepaid.

You can Get the Book FREE

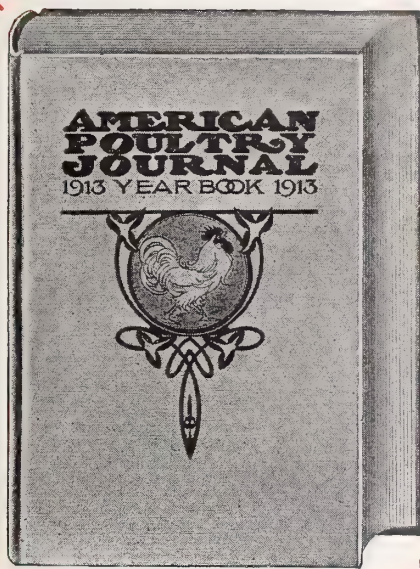

# NEW BIG POULTRY BOOK FREE

## American Poultry Journal Year Book for 1913

Is undoubtedly the greatest poultry book ever published in this country and we are giving you an opportunity to get this book **ABSOLUTELY FREE** of all cost. Naturally you wonder why we are so generous—but there's a good reason. We want subscribers for the "American Poultry Journal," the oldest, largest and best poultry paper published in America—good live subscribers who are interested in raising poultry and who want to know the most advanced and scientific methods of rearing their fowls. That's the reason why we are giving away free the best and most useful poultry book ever published. We can afford to do this, as it saves us commissions to agents and solicitors.

Read this page carefully and remember the offer is a bonified one guaranteed by a responsible publishing house that has been continuously in business for 42 years. You can't lose—so send for your book today.

## Get This Big Book Free

## EVERYBODY PRAISES BOOK

### "An Excellent Book for Poultrymen"

American Poultry Journal, Gentlemen: We have looked over the Year Book with a great deal of interest and find it filled with valuable poultry information. It is certainly an excellent book for poultrymen. Yours truly, C. H. Chaplin, Sec'y Sheffield Farm, Part, Wyandottes, Glendale, O.

### "More Than Pleased"

Dear Sirs: Received the Year Book for 1913, and must say that I'm more than pleased with same. I think this a great book for amateurs. Yours truly, R. P. Schneider, West Newton, Pa.

### "Is Worth Waiting For"

Gentlemen: The Year Book has reached me and more than fulfills my expectations. It is worth waiting for. Yours, Edwin R. Frazer, Oakland, Cal.

## Poultry Show Reports

One of the most valuable features of the Year Book to the exhibitor and breeder is the complete reports of the leading poultry shows held during 1912-13. 1st, 2d and 3d prize winners, with judges making the awards and number of entries in each class, are reported of nine of the largest shows, and 1st prize winners of the next 32 largest shows, and shows having less than 1000 entries are compiled into a directory, giving number of entries, entry fees, date of show, name of secretary, who furnishes the coops, etc.

The Year Book also contains a Specialty Club Directory, Experiment Station Directory, Poultry Judge's Directory, Biographies of 30 successful prominent breeders; The American Poultry Association, its officers, branches, Organizers, and what it is. Complete reports of the National Egg-Laying Contest; North American Egg-Laying Competition, and the Inter Ocean-Midlothian Farms Egg-Laying Contest.

## NOT A ONE MAN BOOK

The table of contents shows that it took 29 of the best poultry experts to edit and write the great American Poultry Journal Year Book for 1913.

The editors of the Year Book are: Jas. W. Bell, Editor in Chief; Clarence Ward, Managing Editor; Louis A. Stahmer, Artist and Contributing Editor; Dr. Prince T. Woods, H. H. Stoddard, C. W. Zimmer, Helen T. Woods, Miss Carey of England, are the contributing editors, besides 21 special articles by leading specialists on poultry culture.

## The Year Book Contains

**379 PAGES, all chuck full of valuable, up-to-date information for the poultry raiser, such as "The Poultryman's Calendar,"** telling what to do each month in the poultry yard; many articles by prominent breeders on such subjects as Line breeding with chart, Dr. Wood's Improved Open-Front Poultry Houses, with illustrations showing how to build one; Capons and Caponizing, with illustrations; Feeding the Layers, with feeding formulas and table of food values; Opportunities in Poultry for the Farmer; Advertising Pure-Bred Poultry; A Simple Indoor Fireless Brooder, with illustrations; Stoneburn Trap Nest, with illustrations showing how to build one; The Diaphragm Open-Air Poultry House, with illustrations; Gillette Open-Air House; Old and New Breeds; and many other special articles by leading specialists of this country and England.

The Book is a comprehensive review of the poultry industry for 1912-13, all thoroughly and carefully indexed for instant reference. It is worth \$5.00 of any poultryman's money.

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York, Winter 1910-1911.

The Three Greatest Living Barred Rock Males

# E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

Win the most remarkable record beyond all precedent in Barred Rock history at the imperial and most classic show of all America—Madison Square Garden, New York—this winter of 1913. Winning as follows:

First, second, sixth and eighth on cockerels. First and sixth on pullets. First, second and fifth on exhibition pens. First on cockerel mated pen. Second, third, fourth and fifth on cocks. The Imperial Prize of the show, Sweepstakes special for champion male. Sweepstakes special for champion female. Diploma presented by the American Poultry Association for best cockerel. Sweepstakes cup for best Plymouth Rock hatched in 1912, male or female, any variety. Challenge silver cup for best exhibition pen. Special best shaped male. Special best colored male. Special best colored female. Best cock, cockerel, hen and pullet, four best cockerels, four best pullets, \$25 special prize, presented by the New York Show for finest display. All silver cups and cash specials—four times as many first prizes as any competitor. More first prizes than all competitors combined. More first, regular and special prizes than won by any exhibition of any breed.

## My Exhibition of 56 Birds Was the Best the World Has Ever Seen

No other Barred Rock breeder has ever produced or is producing such matchless quality. Every feather in my exhibit was bred on my farm. My First Prize Champion Cockerel and First Prize Champion Pullet are years ahead of their time. They are the produce of the highest skill. No other Barred Rock breeder has ever accomplished the unprecedented achievement of winning the two greatest prizes in the world, Champion Male and Champion Female, at one show in Madison Square Garden. For 25 years at New York my "Ringlet" victories have been complete; my clean sweep of 1ST, 2ND, 3RD, 4TH AND 5TH PRIZES on pullets has never been approached at Madison Square Garden and stands alone and unequalled. The Imperial "Ringlets" are the standard by which all other Barred Rocks are judged. To meet success in winning prizes you must have my birds and eggs. I will sell you grand exhibition birds for any show, and breeders of this Richest First Prize, New York, blood. Richly illustrated 70-page catalogue upon request. It is full of original pictures of New York winners from life.

**Eggs** From the finest exhibition matings in all the world, \$10.00 per setting; four settings, \$35.00 one hundred eggs, \$60.00. One-half these prices after June 10th.

# WHITE ORPINGTONS

## Superb Type and Superior Quality

### January and February Hatched Youngsters For Sale

Never have I found young chicks to prove more completely the claim made for them regarding TYPE and QUALITY than does my present young stock. It is indeed a remarkable line of cockerels and pullets hatched in January, February and March. As it is possible to detect any minor faults in birds after they are eight weeks old, and to form a pretty fair idea as to how they are likely to develop, I have placed on sale about 600 of the most promising White Orpingtons ever produced—large, vigorous, massive birds raised on acres of blue grass sod.

### OLDER STOCK AT BARGAIN PRICES

Due to the fact that I must make room for younger stock, it will be necessary to dispose of a number of HENS and COCKS on the breaking up of my breeding pens. These, of course, must go at attractive prices, and here is an opportunity to get some foundation stock the stamina and vigor of which could only be arrived at through the wonderful blue grass range commanded by Russell Cave Poultry Yards as a branch of the renowned 8,000-acre Elmendorf Farm. **High-Class Exhibition Specimens**—I am now prepared to condition birds for the early shows. An extra line of **Duroc-Jersey** young pigs for sale. **Russell Cave Poultry Farm** **Elmendorf Stock Farm** **Louis Lee Haggin, Prop.** **R. 3, Box 1025, Lexington, Kentucky**

## HARRISON'S ROYAL REDS

### LEAD ALL OTHERS

Never before in the history of the breed has any exhibitor equalled the record made by my strain personally exhibited by me at the last Chicago and Indianapolis shows.

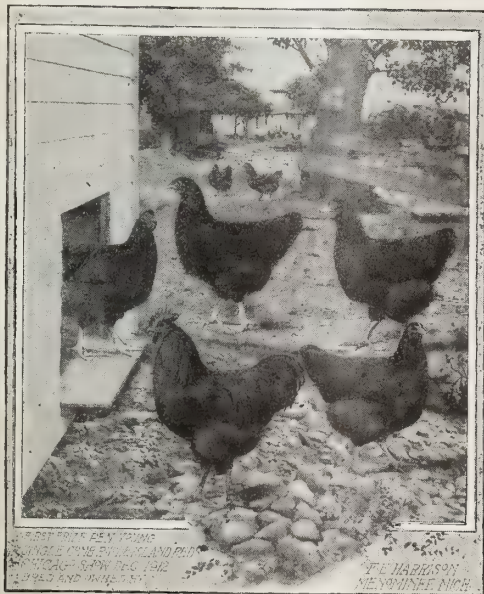

My win at Chicago of 1st, 3d and 4th cock; 2d and 3d hen; 1st, 2d and 3d pullet; 4th cockerel; 1st and 2d old pen and 1st young pen has never been equalled in the history of the show.

My win of six firsts, six seconds and six thirds at Indianapolis is the world's record for a national show.

I have upwards of 2,000 head of stock from these illustrious winners, and am prepared to furnish winners for any show in America.

REMEMBER—There is no more popular strain in the world than Harrison's Royal Red Strain. Catalogue free.

F. E. Harrison : Box 30 : Menominee, Michigan

## Mr. Cleveland Says—

"Have hatched uniformly good hatches of large fluffy chicks and the small amount of care and attention required by the incubator

is really astonishing."

### Read His Complete Letter :

#### SUNNY BROOK FARM

Eatontown, N. J., June 23, 1913.

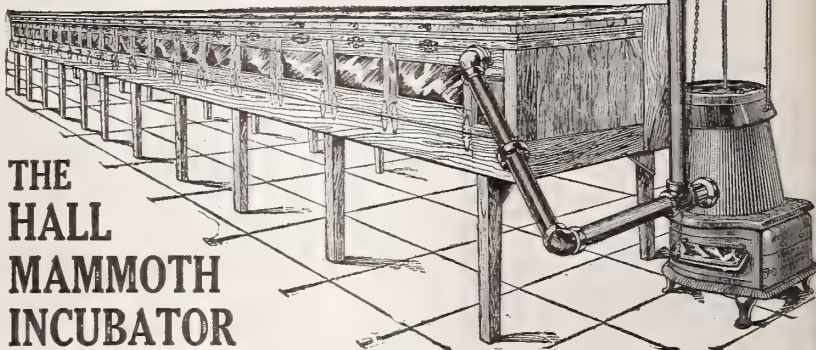

Hall Mammoth Incubator Co., Little Falls, N. Y.

Gentlemen:—Now that the season is practically over, we wish to write a few lines to place ourselves in your list of pleased customers.

Both the incubator and brooding systems which you installed in our farm last fall have given eminently satisfactory service. We have hatched uniformly good hatches of large fluffy chicks, and the small amount of care and attention required by the incubator is really astonishing to me. We figure that on our large machine the time in caring for the furnace is no more than would be required for one oil lamp. The machine operates as well on one side as on the other and we have had no difficulty whatever with it. The brooding system, we think, is the best we have ever had, being simple in regulation and very easy to keep clean. The result of using your equipment is a very large flock of strong, healthy chicks with which we are well pleased.

Yours very truly,

SUNNYBROOK FARM. By Charles D. Cleveland

## THE HALL MAMMOTH INCUBATOR

is used and endorsed by many prominent and practical poultrymen. Men who, from actual experience, know that it hatches large percentages of strong, vigorous chicks. If you are interested in increasing your hatching capacity at the lowest operating cost—consistent with good results—investigate the merits of the Hall Mammoth Incubator. Its great simplicity and economy of operation will appeal to you.

## The Hall Brooding System

has the same advantages over other systems of brooding as the Hall Mammoth Incubator has over other hatchers. It raises more strong, hardy and vigorous chicks to the "safe" age and requires less care and attention.

## Prepare for Next Season—NOW

If you are interested in increasing the hatching or brooding capacity of your poultry plant, write for our latest catalogue. It is a large book handsomely illustrated with views of many famous poultry farms and contains much valuable information.

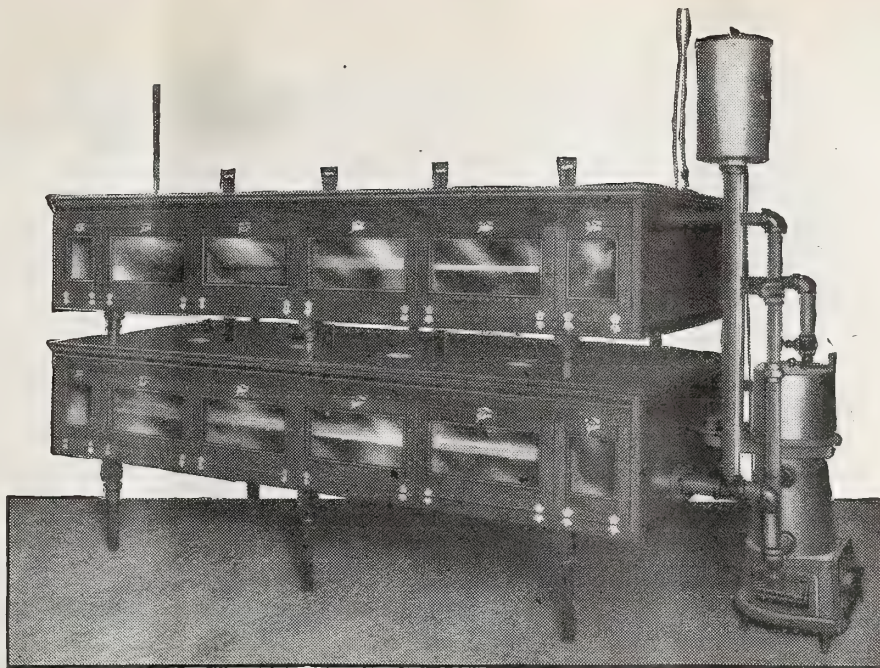

Investigate now the merits of the Hall Mammoth Incubator. Your profits in custom hatching or selling day-old chicks depend on a good early start with the right equipment.

Write today for the Hall book and tell us your hatching and brooding plans or troubles. Ask us questions. Our experience is at your service.

THE HALL MAMMOTH INCUBATOR COMPANY  
132 Southern Avenue Little Falls, New York

## The Wonder of the Poultry World!

### 1914 Model

# NEWTOWN GIANT INCUBATOR

Puts two Incubators, one above the other, in the cellar that would accommodate but one before! Will save thousands of dollars in cellar construction for poultrymen who must increase their hatching capacities!

Turns 1200 or 30,000 eggs in less than 60 seconds! A turn of a handle at the end of the machine does it. Those eggs not to be turned are held stationary by simple adjustment. This device will earn the cost of your machine in one season by its great saving of time and labor!

Feeds coal to the fire automatically! Coal magazine holds 50 to 100 pounds of fuel according to size of heater. As one piece of coal is consumed another takes its place. Magazine requires filling but once in 24 to 48 hours. Insures a constant, even fire, easy to control.

Automatically regulates temperature, ventilation and moisture at each compartment by action of thermostat and damper in top of compartment. Excess animal-heat escapes and moisture is drawn into compartment from water-trough

under Air Intake. Liquid portion of egg preserved and proper temperature and ventilation assured all through the hatch.

Rings an electric alarm bell to warn operator when a compartment needs attention, day or night!

Automatically lights up the compartment requiring attention, so that the trouble may be located and adjusted immediately in the darkest cellar!

Has six safeguards against "off" temperature, making hatching a pleasure instead of a grind and a worry.

These several new and exclusive Newtown features insure great economy of operation and put incubation on a safe and sure basis.

Send now for new Incubator Catalog I and learn why the improved Newtown Giant has astonished and delighted all poultrydom. If you have an incubator of any size or make, have it modernized and Newtown improved. Let us figure with you on your requirements. Get all the facts—they mean much to you.

# CANDEE

Used  
Practically  
Exclusively  
by the  
Leading  
Duck  
Growers  
of  
Long Island

More  
Candee  
Systems  
in use  
than all  
other  
Mammoths  
Combined

A 10,200 Sectional Candee Automatic

## TO HATCH IN ALL SEASONS REQUIRES A CANDEE

**P**OSITIVE temperature control, in all seasons, in all temperatures, at all hours, automatically. It is the Candee that is best fulfilling these requirements, on the largest number of successful farms. Where sentiment does not count, facts show that the Candee, of any size, can be operated in July and August weather, while others fail.

## Stop Wasting Your Time and Money

If you are spending more than a few minutes a day looking after your incubator, you are losing money.

You can't afford to spend your time trimming and filling oil lamps or hand regulating your incubator.

You must use **AUTOMATIC MACHINERY** to keep up with your competitor.

Devote your time and space to Custom Hatching and Baby Chicks and make real money in the spring.

There's a reason why Candee customers are more than pleased with this year's work.

## Don't Worry Through Another Year

Begin by getting our catalogue, then visit present customers and see for yourself that the Candee has taken all the drudgery out of incubation.

You will find Candee operators enthusiastic over their success and they will tell you that running the machine is only an incident in their day's work.

You will find them proud of their healthy flocks and that they have lost fewer than ever before.

Then you will realize the new era that the Candee has brought in incubation.

**Hodgson Portable Poultry Houses****WIGWAM Brooder**

Hot-water and hot-air heating combined gives perfect ventilation—no danger of overheating—maintains even temperature regardless of cold outside. Used and endorsed by poultry experts and by experienced

ment stations and such men as Dr. A. A. Brigham, Dr. N. W. Sanborn, Dr. P. T. Woods and Mr. A. F. Hunter. Size, 3x5 feet.

**\$15<sup>00</sup>****No. 0 Colony Laying House—****for 12 Hens**

Fitted complete with nests, fountain and feed trough. Sanitary—easily cleaned. One man can easily care for several hundred birds. Nicely painted—set up in 15 minutes. A comfortable year-round house. In stormy weather the run may be covered, giving a protected scratching room. Size, 10x4 ft., 5 feet high.

**\$20<sup>00</sup>**

Send for catalogue.

**E. F. HODGSON CO., Room 332, 116 Washington St., Boston, Mass.****Is Your Roof Sparkproof?**

Once the universal test for a good roofing was: "Is it leakproof—weatherproof? Will it keep out driving storms?"

Today the test is much broader: "Will it protect from storms and sparks and burning embers?" Shingle roofs are now prohibited in many places by law. The National Board of Fire Underwriters says: "The use of wooden shingles is a public crime."

NEPONSET Paroid Roofing will do all that the best shingles ever did, and in addition is a protection against fire, and can't blow off.

This is the positive protection NEPONSET Paroid Roofing has given for 15 years. U. S. Government engineers, architects and property owners specify NEPONSET Paroid solely on the strength of proved past performances—not on future claims. NEPONSET Paroid costs but a trifle more—lasts years longer. It is a quality product.

**NEPONSET****Waterproof Building Products****Roofings**

NEPONSET roofings are a fire protection, leakproof and long lived. Anyone can lay them. NEPONSET Paroid Roofing is for general use. NEPONSET Proslate Roofing is an ornamental roofing for dwellings. Attractive colors.

**Building Papers**

If NEPONSET Waterproof Building Papers are built into walls and floors, the building will be warmer, will cost less to heat and will last years longer. Recommended by architects, engineers and building owners everywhere.

**Wall Board**

NEPONSET Wall Board is a scientific product which takes the place of lath and plaster; comes in sheets 32 inches wide. Remember, it is the only wall board with waterproofed surfaces that requires no further decoration. Anyone can put it up.

Are you going to build? Write for more facts about the products in which you are interested. Send for samples, free booklet, and name of nearest NEPONSET dealer.

# BUILDING MATERIAL

**CHICAGO HOUSE WRECKING COMPANY**  
THE GREAT PRICE WRECKERS

## B-I-G Special SUMMER OFFER

Right now is the time to buy your lumber and building material, even though you do not need it at once. Prices will never be lower. We have determined that the summer of 1913 is going to be the biggest "SALES" time in the history of this Company, and the way we will do it is by taking our previously low prices, (the lowest ever known and lower than any ever offered by any other concern on earth), and cutting them once again, so that they will be CUT TO THE FINISH. Therefore, if you are awake to the opportunity, here is your chance to buy at a saving of from one-fourth to one-half. We have mammoth stocks right here at our Chicago Plant, and at mills both on the east and west side of the Mississippi river and can make prompt shipment to all points in the United States. We are telling you facts. There are no half-way statements made by us. If you are ready to order, tell us what you want; send us a list of the material you require and we will put a proposition before you that will mean money in your pocket.

### No Money Down

While our established terms are CASH and our guarantee, as published in this advertisement, is so broad and binding that no one need hesitate, yet, if you do not want to pay cash, it will not be necessary. All we want to know is that you are responsible, and that the goods will be paid for when they reach destination, and prove as represented by us. This certainly is a liberal offer. We have unbounded faith in your honesty and integrity, as well as in the quality of our material and our ability to fill your order correctly, otherwise we would not take all the risk.

Grade for grade, our material is the best that money can buy. Every dollar's worth of merchandise offered you in the building material line is brand new, first-class stock; all grade specified and guaranteed. Our lumber and mill work is all brand new, of standard manufacture and is better than can be bought in any first-class lumber yard in the United States. Our prices are positively rock-bottom. Just think of buying a beautiful, modern, up-to-date, two-panel first quality, interior door for as low as \$1.84. You must get our prices.

**ONE-FOURTH to ONE-HALF  
IF YOU BUY AT ONCE**

## SAVED!

**\$738.00 Buys the Material  
to Build This House**

This beautiful, up-to-date, full two story, 7 rooms and bath, home. Has been sold nearly 1000 times; copied and imitated all over the United States. Our price and quality cannot be equalled—the price is easily 25 to 50 per cent below local dealer's prices. Immediate shipment right from our Chicago stocks, where you can come and see it loaded. No money down.

\$850 to \$900 is the price asked for similar houses by other concerns. Here, then, is one of our special summer offers, and one which we have been considering for a long time, and have finally decided to make, to all those who during the summer of 1913 see fit to take advantage of this offer. This home is thoroughly practical. Solid, substantial construction throughout. Material all that can be asked. No. 1 joists, rafters and studding; Clear Siding, Clear Flooring, Clear

Shingles. Beautifully grained Clear Yellow Pine interior trim, and above all, the biggest bargain that we have ever attempted. This home has been built nearly one thousand times; we have hundreds of letters (unsolicited) from customers who purchased from us, some of whom saved as high as \$1,000 on the complete home. If others have done it, you can do it by dealing with us.

Now, if you will consider seriously purchasing this home between now and September 1, 1913, we will furnish you the material at the above prices and name you a FREIGHT PREPAID price to your railroad shipping point, that will be far lower than you can obtain elsewhere. We have determined to sell at least one thousand homes before the 1st of September, and you must write today for our beautiful 96-page Book of modern homes, Bungalows, Farms, Portable Houses and Illustrations, clear floor plans, correct low prices—all at once. Use the coupon below, or merely drop a line saying where you saw this advertisement and tell us in a general way what you want. We will reply immediately. There will be no obligation of any kind on your part.

**\$2.00 Buys Complete** perfect Blue Print Plans and Architectural Specifications, including full descriptive Material List, giving the size, style, quality and catalog number of the various items entering into the construction of this house. The same price will buy a set of Plans for any of the houses shown in our famous BOOK OF PLANS. If you haven't a copy of it, be sure and write for it at once.

**Send Your Complete Lumber Bill  
for Freight Paid Estimate**

We will make you an estimate and name you our lowest freight prepaid price that will surely mean a big saving to you. Do not put it off—write today.

Come to Chicago. Make an inspection of our mammoth plant, located in the heart of

the greatest manufacturing district in the world. You will be agreeably surprised at the magnitude of our establishment, our stocks and our service. We are the only concern that has all its material right here at one plant, where you may come and personally inspect same and supervise the loading of your own car. Immediate action and attention guaranteed.

It is, however, not necessary for you to come to Chicago in order to get just as good attention as though you were here. We will fill your order correctly, promptly and just as you want it. You can include in your lumber order millwork, doors, windows, hardware, plumbing, heating, roofing, wire fencing, paint, furniture, household goods; in fact, every article bought and used by mankind. We can fill your requirements complete and at a uniformly low price, and we sell under a guarantee so broad and binding that you are absolutely protected.

## GUARANTEE

**Our Broad and Binding Guarantee:—**This Company has a capital stock of ten million dollars. Its honesty and upright methods have been known for 20 years; we have thousands upon thousands of customers who have yearly taken advantage of our special sales. We say to you, that no matter what you buy from us, if you fail to find the material absolutely satisfactory, and according to your requirements and expectations, then we will take back such unsatisfactory material at our freight expense and pay the freight charges both ways. No fairer offer could be made by any one. We are confident that the goods are right—that's why we have no hesitation in making you this broad, general guarantee under the terms of which you can buy with absolute safety. You will get what you buy, because otherwise we will be under an obligation to take back material at an expense which would not permit us to do anything but what is fair and square. We refer you to any bank anywhere; to any commercial agency; to any express company, to the publisher of this or any other paper and to the world in general.

## Roofing at Half Price

**Galvanized Steel Roofing is Fire, Water and Lightning Proof**

We bought 20,000 squares of this Corrugated Iron Roofing, which we offer at this remarkably low price. It is new, perfect and first-class, but light weight. The sheets are 22x24 ins. x 1/4 in. corrugated. Our price of \$1.25 per square is f. o. b. cars Chicago.

When ordering this item specify Lot No. BD-700. This is not galvanized, but black steel roofing. Write us today for our special FREIGHT PREPAID PRICES on new, galvanized roofing. We are offering prices lower than ever before offered in the roofing business. Galvanized roofing at \$2.50 per square and up. Ask for free samples.

We can furnish anything needed in Roofing, Siding or Ceiling.

**62c per 108 Sq. Ft. buys best Rubber Surface "Ajax" Roofing**

Here again we show the lowest price ever known for roofing of quality. This smooth surfaced roofing we are offering is our one-ply "Ajax" brand, and the price includes necessary cement and caps to lay it; this price is f. o. b. Chicago; at 75c per square, we pay the freight in full to any point East of Kansas and Nebraska and North of the Ohio River, provided the order is for at least 3 squares. Prices to other points on application. "Ajax" roofing is guaranteed to wear as long and give as good service as any Ready Rubber Surfaced Roofing on the market.

It is put up in rolls of 108 square feet, and contains three to four pieces to the roll.

We have other grades of Ready Roofing, which we offer at prices easily 30 per cent below regular quotations. Write today for free samples and Roofing Catalog. Fill in the coupon.

## Wire at Half Price

**BARB WIRE Less Than 2c Per Rod**

New galvanized, heavy weight barb wire, put up on reels about 100 lbs. to the reel. Lot 2-BD-26, per 100 lbs. \$2.05. Galvanized barb wire, light weight, first grade, best made, put up exactly 80 rods to reel, 2-point barbs. Lot 2-BD-28, per reel \$1.40.

**WIRE NAILS, Per Keg, \$1.38**

10,000 kegs, put up 100 lbs. to the keg mixed, all kinds together, regular nails, such as made by nail factories. Lot 2-BD-33, price per keg \$1.50. 1,000 kegs of ten pennyweight regular new wire nails, 100 lbs. to the keg, while they last, per keg \$1.85. Write for our free Wire and Fence Catalog. Gives valuable information to any land owner. Send coupon.

**Smooth Galvanized Wire, Per 100 Lbs. \$1.25**

It is suitable for fences, stay wires, grape vines or for any ordinary purpose where wire is used. This galvanized wire is irregular in length—it ranges anywhere from 50 to 250 feet. \$1.25 is our price for No. 6 gauge. Other sizes in proportion.

**15c Per Rod Buys Best Hog Fencing**

Here is another one of our remarkable bargains. A high grade, strictly perfect fence made of No. 9, 11 and 12 wires, perfectly adapted for hogs and general farm purposes, 26 ins. high, square mesh, put up in suitable size rolls. Lot 3-BD-31 per rod 15c. Other heights in proportion. Staples, 100 lbs. \$1.75.

**CHICAGO MILLWORK SUPPLY CO.**  
AMERICA'S GREATEST SASH AND DOOR HOUSE  
1479 West 37th Street, Chicago, Ill.

## Insecticide Warning

The Insecticide Law requires the plain printing, on each package, of the amount of inert material used, or the material which the Government considers of no value for insecticidal use. Every purchaser of an insecticide should consider this point and should see that the Insecticide guaranty is given by the manufacturer on every package.

**Lee's Lice Killer** contains only 3 per cent inert matter (water). Others contain from 10% to 80% inert matter. Used for poultry and hogs. **\$1.00 per gallon.**

**Lee's Dip** contains less than 10 per cent inert matter (water). Others, from 10% to 30%. Used for killing lice, etc., on horses, cattle, hogs, sheep, dogs, etc.; also as a disinfectant.

**Lee's Insect Destroyer** (powder) contains less than 10 per cent inert matter (Fuller's Earth, used to prevent caking). Others, from 25% to 90%. Used for chickens, pet stock, vegetables, etc. **1 1/4-lb. package for 25c, 3-lb. package 50c.**

**Lee's Flyo-Curo** contains no inert matter. Others, 10% to 75%. Best to keep flies and mosquitoes from horses and cows. **\$1.00 per gallon.**

This is one reason why the Lee Line is outselling all others and especially accounts for the great increase in sales since the Insecticide Act went into effect. We give greater value to the consumer, better formulae, always strictly maintained; less inert matter; in most cases a bigger package for the money.

The Lee line of Foods, Insecticides and Remedies is sold by more than 10,000 dealers in the United States and in many foreign countries. If not at your town, send for latest poultry book and name of nearest agent.

## BANTA

**Incubators never disappoint**

Write for Catalogue of high-class Incubators and name of dealer where you can inspect them. 50-egg up to 800-egg. Also Brooders and Poultry Houses.  
**THE BANTA & BENDER CO.**  
600 3d St., Ligonier, Ind.

**No Guess Work With a "Tycos"**

It does the essential thing with perfect correctness—it registers the temperature in the egg chamber just as it is. A "Tycos" Incubator Thermometer makes no mistakes; it is always accurate. You have to break a "Tycos" to destroy its accuracy. It is "aged" and tested before sold. That is why every "Tycos" is dependable. Send for Free Booklet, "Incubator Facts". "Tycos" Incubator Thermometers, each \$.75. Incubator Hygrometers, each \$1.50.  
**Taylor Instrument Companies** Rochester N. Y.

## THIS IS THE ALUMINUM "CONVENIENT" LEG BAND

Note the strong, secure fastener, so simple and complete—the number is not stamped in, but raised OUT—plain, readable—can't get full of dirt. Reaches you already bent in shape ready to put on—12 bands 20c; 30 for 45c; 60 for 75c; 100 for \$1.00. Sample Free—  
**H. O. SHAW, Box 103, GRINNELL, IOWA**

## SINGLE COMB REDS

My birds win year after year because they have years of careful line breeding back of them, and because I know how to mate them to produce winners. My record of all five firsts and all specials at Chicago is the greatest win ever made on Reds. Eggs half price now. **B. H. Scranton, Box 350, Rising Sun, Ind.**

## Rhode Island Whites

A New favorite with a reason—At Chicago, Dec., 1912, in largest and best class of R. C. Rhode Island Whites ever seen, McCarthy's Peerless Strain made a clean sweep, winning 1st cock; 1st hen; 1st pullet; 1st pen; \$25 cup for best display and \$15 cup for best shape R. I. White. As every prominent breeder, both East and West, had his birds entered, it proves that the Peerless Strain is the best in the world. Send for our illustrated catalog and mating list. **Carl D. McCarthy, Box Y, Kempton, Ind.**

## WHITE ORPINGTONS :: WHITE ROCKS

International champions. January, February and March chicks for early shows.

**John W. Poley, Prop., Box A, Linfield, Pennsylvania**

## A GOOD TRAP NEST

Made in a few minutes from a common box, very simple and reliable. Send 10c for complete printed and illustrated instructions for making your own trap nest. Warm water fountains, automatic feed hoppers, poultry houses, etc. Price list of our wonderful strain of Winter egg producing Barred Rocks free.

**Stirdivant Farms, Sheboygan Falls, Wisconsin**

## Wyckoff's S. C. W. Leghorns

Acknowledged Everywhere the World's Greatest Laying Strain—Unequaled in standard qualities. Remember that we are the originators, and for more than thirty years specialty breeders of the justly celebrated Wyckoff Strain of S. C. White Leghorns, the most profitable strain of poultry in America today. Place your orders at headquarters and make no mistake. 2,000 choice yearling hens, fine strong early cockerels and a few yearling cocks; must be sold at once to make room, and prices will be made especially attractive to early buyers. Send for catalog and state wants as near as possible.

## CLOSING OUT SALE

The "World's Best" S. C. Black Minorcas

We have disposed of our flock of R. C. Black Minorcas and have now decided to make a cleanout sale of our S. C. Black Minorcas. At the American Black Minorca Club Show, the greatest Minorca show on the Continent, we won the Directors \$50 Cup two years in succession for best collection. The dates are recent, 1910, 1911 and 1912. The Provincial Show at Guelph is Canada's Greatest Show. At the last Guelph Show, December, 1912, (we did not exhibit) in the large stand best class ever shown in Canada, our strain won (principally birds we sold and stock from our yards) in S. C. Black Minorcas, cock 1, 2, 3; hen 3, 4, 7; cockerel 1, 2, 3, 6, 7, 9, 10; pullet 1, 2, 4, 5, 144 S. C. Black Minorcas in this class. We have 12 grand cock birds, 60 hens and about 300 chicks and will cleanout at about half the regular price. Please send for sale list and testimonials. We please our customers.

T. A. FAULDS : : LONDON, ONT., CAN.

## White Langshan Club Notice.

The World's National White Langshan Club, recently organized for the interest of White Langshan breeders everywhere, is progressing nicely, most all states now represented. The White Langshans are rapidly forging ahead and becoming one of our most popular breeds, and no breed has won her place with greater merit than the now well known White Langshan. "The Great Utility Breed." Fellow breeders, you owe it to yourself and to the breed to join this up-to-date club at once and help in the advancement of our rights. We need you in the club and you need the club. Why not get your name down on our lists today. The sooner you do it the better it will be for you, and the better it will be for the club. It is next to impossible for one breeder to get the right kind of a show in poultry matters, but by combining and uniting our efforts we can as a body get anything just and right that we may demand. We are organized for benefits and we mean to have them. We expect to have some say as to a standard for our birds and we mean to have a part of our just dues if there is a way to get them. Do you wish to share these benefits? If so, join us and all push together. Send in your dues at once to the secretary, A. D. Freese, Mohawk Village, Ohio, and be enrolled in this up-to-date club. One dollar entitles you to life membership and \$1 extra entitles you to all club benefits for the year, such as free and worthy mention as a reliable breeder. The club stands behind its members, guarantees the reliability of its members and solicits only such members as are reliable.

## Attention, Black Orpington Breeders.

The American Black Orpington Club will offer special premiums at 500 poultry shows and fairs this season. You should be able to compete for these specials. To do so you must be a member. The annual dues are \$1, which will pay you up until January 1, 1915. Poultry show secretaries who have not yet received our 1913-14 offer are urged to write the secretary at once. There are also a few Western State meetings to be had. We are preparing a great meeting to be held at the Madison Square Garden Show, which will be attended by all eastern Black Orpington breeders. The mid-west meeting will occur at Quincy, Ill. We are about to hold the annual election by mail, so you should not put off becoming a member any

longer, but sit down and enclose \$1 today, or write the secretary for particulars. Annual yearbook will be out January 1, 1914, and your name should be in it. Some advertising space yet for sale. Address American Black Orpington Club, Ora Overholser, secretary and treasurer, Eaton, Ohio.

## Notice to Show Secretaries.

The American Buckeye Club offers the following specials during the coming show season. Shows desiring these placed with them are requested to print the following notice in their premium list and send a copy to the club secretary, who will at once send them a full list of breeders.

The American Buckeye Club offers a handsome silver cup for best pen, providing there are two or more exhibitors in the class.

The club also offers four special ribbons, one each for best shape male, best shape female, best colored male, best colored female. Competition open to members of the club. Send one dollar to A. H. Weisberg, Nevada, Mo., secretary-treasurer, for a year's dues and become identified with the active breeders boosting Buckeyes. The new club catalogue will be sent to any address on receipt of four cents in stamps.

## Ancona Club of America News Notes.

The Ancona Club of America has closed with the Poultry Exhibition Co. of Pittsburgh, Pa., for their next annual meet, January 19 to 24, 1914.

The Exhibition Company made a very liberal offer for the meet of this club, giving three silver cups, placing ten ribbons for each five varieties, namely, cock, hen, cockerel, pullet and pen.

They also offer a cash bonus for 250 birds and all Ancona breeders should take advantage of this and be sure to exhibit at this big show.

Exposition Hall contains 40,000 square feet on ground floor, well lighted and ventilated, and they will also furnish a room in the building for club meetings and members during the week of the show.

The Ancona Club of America will offer their customary silver cups and handsome silver sets, and special club ribbons, and with such a large entry as is promised by the breeders of this popular variety there will be a large lot of specials offered by the business men of Pittsburgh, for they never do things by halves in this city, so brother breeders, get busy and exhibit your birds.

In order to compete for all of the specials, join the club by mailing \$1 to Geo. Johnston, secretary, Jerry City, Ohio.

## Buff Wyandotte Specials.

The American Buff Wyandotte Club offers to members four fine ribbons as follows: One for best shaped male, one for best colored male, one for best shaped female, one for best colored female.

Breeders who are not members should join so they can compete for the specials. Send a dollar to the secretary, J. E. Willmarth, Amityville, N. Y., and become a member. It will help you to breed better birds, and will help you to sell them. We elect our officers and decide other important questions by mail vote, so every member has an equal voice in club affairs. Join and help make the best breed the most popular breed. The handsomest specialty club catalogue ever issued is free to members. Others can get it by paying six cents postage.

## Ancona Club of America.

The next annual meeting of the Ancona Club of America will be held with the Poultry Exhibition of Pittsburgh, January 19 to 24, 1914, with A. H. Emch to judge the Anconas. This will make the third successive year for Judge Emch to pass on the Anconas, and this meeting of the club will prove the banner year, as the club has reserved space for 300 Anconas. For particulars, write to J. O. Somers, secretary, Bedford, Ohio.

## Show Secretaries—Attention.

You are authorized to offer our club ribbons at your show, if you will send a marked copy of premium list containing the following offer, to J. E. Willmarth, secretary, American Buff Wyandotte Club, Amityville, N. Y.

## National S. C. Black Orpington Club Notice.

Seventh annual catalog will soon go to press and all breeders of Blacks are urged to join in time to have names inserted. This club should not be confused with any other club devoted to the breed. This club has more than ten times the number of members of any other such club, awards a gold plated medal to every member win-

## CHAMPION BUFF WYANDOTTES

"America's Great General Purpose Fowl"

Again prove their superiority over all others. At the Greater New York Fair and Exposition, August 4-10, 1913, in competition with the Garden and big Eastern winners, won more than twice as many prizes than all competitors combined.

## Get Acquainted

Modern advertisers rightfully expect the publications in which they buy space to guarantee and prove the circulation of each and every issue. Certain such papers are known as the **Progressive Poultry Papers**.

Each publisher of such paper is progressively striving to furnish their readers with live, scientific, up-to-date reading matter and agrees to prove his circulation, promote and protect the advertisers interests by refusing objectionable advertising. It will pay advertisers to get acquainted with these papers. For list of papers, rates and circulation information address

**E. J. W. DIETZ**

Publishers Special Representative  
919 Advertising Bldg., Chicago

the club in good standing. Write for printed notice for your premium list to M. S. Brady, secretary, Richards, Mo.

### Poultry Show at the Illinois State Fair.

The premium lists of the great Illinois State Fair, to be held in Springfield, Ill., October 3 to 11, inclusive, are now ready for distribution, and we want every poultry fancier to have one. Premiums amounting to over \$100,000 are being offered, and in addition to the poultry attractions the Illinois State Fair, with its immense buildings and beautiful grounds and splendid exhibitions, makes the date one of universal interest.

The poultry building is one of the finest in the country and the 1912 poultry exhibit was considered by fanciers and poultry judges to be one of the greatest shows ever held in the United States. This year every effort is being put forth, by the increase in premiums and additional new attractions, to make the coming show still larger and better.

Adjoining the poultry building a large tent will be erected, which will be headquarters for the Illinois branch of the American Poultry Association, the Illinois State Poultry Association and the meeting place of all specialty clubs. All poultry associations and special clubs and those interested in the advancement of poultry culture are cordially invited to make this their headquarters.

For information regarding the poultry department, Illinois State Fair, address O. L. McCord, Danville, Ill.

### Coliseum Poultry Show, St. Louis.

The Mississippi Valley Poultry Association of St. Louis has been organized with a capital stock of \$5,000. The officers are E. W. Groves, Jr., president; W. W. Henderson, vice president; Henry Steinmesch, secretary and treasurer.

It is aimed to work in harmony with the Chicago show and to make the St. Louis and Chicago shows to the West what the New York and Boston shows are to the East.

Our judges, so far selected, are Theo. Hewes, of Indianapolis; A. C. Smith, of the Minnesota Agricultural College of St. Paul; C. S. Byers, Hazelrigg, Ind.; the Orpington specialist, Fred Harrison, of Menominee, Mich.; E. C. Branch, of the Revision Committee of the American Poultry Association, Lee's Summit; Edw. Joynson, late of Lancashire, England, who has judged at the Crystal Palace; Tom Woods, V. O. Hobbs and others yet to be selected.

Our dates are November 25th to December 1st, and the big St. Louis Coliseum will be the place.

Premium list ready October 1st. For copy of same and other information, write Henry Steinmesch, secretary, 220 Market street, St. Louis, Mo.

### The National Poultry Show.

It is with particular pleasure that we give to our readers information of the coming great National Show at Washington, D. C., December 23 to 27, 1913.

The Greater Washington Poultry and Pigeon Club was formed February 14th last with 10 members, and at this time numbers nearly a hundred live ones that are bound to succeed, and to do things according to the start they have already made. There is no reason why this should not be one of our best and leading shows, and as it now is in the hands of wide-awake breeders, we predict and hope for its future.

The national capital has its features to draw and in the past many of our largest and best breeders have exhibited there. With the association on a sound basis, as it now is, it is sure to draw better than ever, assuring the best of competition and placing a high value on its every award.

Besides holding its annual exhibits, this association promises to do much good work for the general poultry interests, as they now have a bill in the United States Senate asking for a "national charter," which we hope will be granted them. They have also started things for the extension of the parcels post laws to cover the carrying of exhibition poultry and pigeons and an extension of the weight limit to 50 or 100 pounds. These are matters of importance and it is evident that a strong and well supported organization at the capital will be of rare value to the breeders at large.

The A. P. A. should well consider Washington for its 1914 meeting place and give its hearty aid to this association to secure its charter and thereby give it proper weight and standing.

The judges for the next show are George O. Brown, C. T. Cornman and H. P. Schwab.

The secretary is P. Francis Sutor, 715 Twenty-first street, N. W., Washington, D. C. Write Mr. Sutor for full information and premium list and let us all help to make this a national show in fact.

H. P. Schwab.

### Illinois State Poultry Show.

The Illinois State Poultry Association will hold its twentieth annual show in the State Arsenal Building, Springfield, Ill., January 5-11, 1914.

The Illinois State Show has held nineteen successful shows. The exhibitor takes no risk in exhibiting at this show and every claim is sure to be paid. The Illinois State Show has never failed to make good and every exhibition has been just a little bit better than the other.

The catalog, which will be issued about November 15th, will disclose the fact that this show offers more for its entry fee than any other show in the country.

If you are interested in showing, send in your name and address on a postal card to Theo. S. McCoy, secretary, Golconda, Ill., to insure you a copy.

O. L. McCord, D. E. Hale, J. C. Johnston, George A. Heyl and J. H. Minshall, of

Brantford, Canada, will judge the exhibit. The secretary has an attractive offer to present to any specialty club desiring to hold its annual national, state or district meeting at this show.

### Don't Forget.

The great Coliseum Poultry Show has selected ideal dates for their fifth annual exhibition, December 12 to 17, 1913. Ample time to get in and get out of the hall, with no great rush. A big added expense to us in hall rent, but more convenient to the exhibitors. The hall will be ready the evening of the 11th and judging will be done on Friday the 12th. Show will be open on Sunday the 14th. Remember the dates and be sure to send your name in for list. Premium list November 1st, rain or shine. If it fails to reach you by the 5th, write for duplicate. Entries close November 25 and not one day later. Free Empire coops in all departments.

Theo Hewes, Secretary,  
Indianapolis, Ind.

### The Great Williamsport Show.

True to its name as an association that does things, the Williamsport Poultry Association has employed Mr. E. G. Johnson, the manager of the Family Theatre, who so successfully pulled off the Pure Food Show and who has charge of the Old Home Week

## Warm Water--Get Eggs!

A little PUTNAM stove, nine inches diameter, four inches high, fireproof, keeps water from freezing in coldest weather. Holds three and one-half pints oil, burns one month without refilling or trimming. Prevents frosted combs. Extra eggs pay for stove every week. \$1 each, \$5 for six. Satisfaction or money back.

I. PUTNAM, 908 West Water Street, ELMIRA, NEW YORK

Mount Pleasant Farm : Mount Pocono, Pa.

## Cochin Bantams

### Black-Buff-Partridge-White

We wish to state that we have scientifically bred the 4 Varieties of Cochin Bantams exclusively for many years and our strain has proven its exhibition quality throughout U. S. Not only when exhibited by us, but many of our customers have reported marvelous victories, (at such shows as Rochester, Pittsburgh, Pasadena and many other renowned shows), which were accomplished with specimens of our strain. Therefore

**The Real Cochin Bantams**  
**America's Best Cochin Bantams**  
are bred in Ohio at the Wahebe Bantam Yards and such quality cannot be found anywhere else on this great continent. If it is your intention to win this season and to breed winners write the Home of America's Best Cochin Bantams, or you will be disappointed in your undertakings.

### Wahebe Bantam Yards

Box 13B, Evanston Station Cincinnati, Ohio

festivities, to manage the attraction end of the Williamsport Poultry Show.

Mr. Johnson has advised us that we can announce to the poultry world that in addition to the best poultry, show Williamsport has ever held that there will be an added attraction which will be the best that has ever been held in conjunction with a poultry show.

The poultry show itself will far surpass any previous efforts. More money will be offered than heretofore and an extra judge has been employed to look after the increasing Campine exhibitors.

One thing which is extremely encouraging to the management is the fact that the breeders are looking after specials for their individual breeds, thus assuring our friends of more specials than ever before, for instance, the Barred Rock class alone will have over fifty dollars in cash offered, and this money should bring out a great line of the favorite American variety.

All roads point to Williamsport Thanksgiving week, November 25th to 28th.

Write McCormick Dawson, Williamsport, Pa., for a premium list.

### Merger of Three Shows.

"Harmony in a Big Show" is the slogan of the first show to be staged by the Mississippi Valley Fanciers' Association of Davenport, Iowa, Moline and Rock Island, Ill. It will be held in Rock Island, November 24th to 29th, inclusive.

The Mississippi Valley Fanciers' Association was organized during the past year, being a merger of the Mississippi Valley Poultry and Corn Association of Moline, Island City Fanciers' Association of Rock Island and the Davenport Poultry Club of Davenport. Separate shows have been held each year, but with a view to combining the forces of the poultrymen of the three cities and putting on a show that would rival the best to be found in the country, the merger was effected. Officers of the association include Dr. O. M. Myers, of Rock Island, president; L. C. Schmidt, of Davenport, vice-president; O. F. Freeman, of Moline, secretary, and T. C. Carey, of Davenport, treasurer.

O. L. McCord and Thomas B. Faulkner have been secured as judges. Entry fees have been fixed at \$1 for each bird and \$3 for pen.

Write to O. F. Freeman, secretary, Moline, Ill., for premium list.

### Greater Pittsburgh Show.

The Greater Pittsburgh Poultry Show Association will hold its second annual show November 24 to 30, 1913, at the South Side Market Hall, Pittsburgh, Pa. The hall is well adapted for the purpose—light, heat, good ventilation and shipping facilities. The officers and members of the association are not leaving anything undone to make this a bigger and better show than last year. The premium list of merchandise will also be larger and cups galore will be given.

The association was highly complimented by the breeders for honesty of judging, cooping of the show and the prompt payment of money and merchandise premiums. The same standard will be again put in force this year. Wm. F. Auerswald and Chas. H. Moore, former judges, have again been employed to place the ribbons.

For premium list drop the secretary a postal, and when ready, same will be mailed you. A. J. Henning, secretary, 1812 Carson street, Pittsburgh, Pa.

### Goshen Poultry Show.

The Goshen Poultry Association recently organized and elected the following officers: President, Geo. F. Neiderauer; vice-president, Ralph Watkins; secretary, Dart Emerick; treasurer, Irvin Wilfore; superintendent, H. N. Knight.

H. A. Pickett has been selected as judge and the premium list will be ready for mailing about October 1. Don't forget the December 8 to 13, 1913. D. E. Emerick, secretary, Goshen, Ind.

### St. Louis Poultry, Pigeon and Pet Stock Association.

The officers of the St. Louis Poultry, Pigeon and Pet Stock Association, which consists of Dr. Jules Baron, president; Julius Garrell, vice-president; J. H. Sentenne, treasurer; James J. Long, secretary; W. A. Kappey, superintendent, and George Hartley of Trenton, Ill., assistant superintendent, have selected the following judges for their annual show to be held in St. Louis Thanksgiving week, November 24th to 29th, inclusive.

Judges—C. S. Byers, Hazelrigg, Ind.; C. A. Emery, Cartage, Mo.; Frank Heck, Chi-

### Licene Kills Lice and "Nits."

When other lice killers fail, try Licene. It does the work every time. Send to the Licene Co., 1500 Pontiac Building, Chicago, Ill., for a tube of Licene, price 50 cents, and they will send you enough Licene for 200 birds. This firm will refund your money if you are not satisfied. Mr. E. B. Thompson, president of the American Poultry Association, says:

I have tried Licene with the best of results; it is a most excellent preventative of lice and a quick and rapid exterminator. Licene should have a great sale to poultrymen, who must appreciate its value after being tried.—E. B. Thompson.

### The International Show of Buffalo.

The old reliable International Show of Buffalo, N. Y., will hold its annual poultry, pigeon and pet stock show January 12 to 17, 1914, in one of the largest and newest exhibition halls in America. For premium list send to Stanley A. Merkle, secretary, 35 Coal and Iron Exchange, Buffalo, N. Y.

The Little Rock Poultry Association, of Little Rock, Ark., will hold its annual exhibition of poultry, pigeon and pet stock on October 13 to 18, 1913, with C. A. Emery as judge by comparison. J. V. Johnson is the efficient secretary, which insures a well managed show, and all interested should write him immediately for particulars regarding this show. Address J. V. Johnson, secretary, 820 State Bank Building, Little Rock, Ark.

The tenth annual poultry show of the Tri-City Fanciers' Association will be held in Armory Hall, Davenport, Iowa, Thanksgiving week. The fanciers of the three cities of Rock Island, Moline and Davenport expect to pull off a larger and better show than they ever attempted before. Larger premiums, more specials and silver cups. Uniform cooping and a comparison show with Russell and Cram as judges. Harry W. Atkins, secretary, Davenport, Iowa.

The annual show of the Fox River Fanciers' Association will be held at Aurora, Ill., December 30 and 31, 1913 and January 1 to 3, 1914. The Hale explanatory score card will be used again this year. Judges are W. C. Pierce and W. S. Russell. Uniform cooping. For premium list write C. L. Valentine, secretary, 77 Fox street, Aurora, Ill.

The fifth annual exhibition of the Southern Kansas Poultry Association will be held at Coffeyville, Kan., on December 8 to 13, 1913, with Henry C. Dipple as judge. For premium list send to Chas. Radloff, secretary, Coffeyville, Kan.

The Stevensville Poultry Association will hold its second annual show December 9, 10, 11, 12 and 13, 1913, at Stevensville, Mont. Judge Greenfield, of Butte, Mont., will place the awards. For further particulars write D. W. Harburts, secretary and treasurer.

The second annual exhibition of the great Armory Poultry Show will be held at Louisville, Ky. Will be held December 1-6, 1913. It will be made the greatest poultry event ever held in the central states. John A. Murkin, secretary-treasurer, Nashville, Tenn.

The eighth annual exhibition of the Tennessee State Fair Poultry Show will be held at Nashville, Tenn., September 29 to October 4, 1913. This is the South's greatest poultry show. John A. Murkin, secretary, Nashville, Tenn.

The Greer County (Okla.) Fair Association will hold a poultry and pet stock show in connection with its annual fair, September 10 to 13, 1913. Write to Travis E. Gooding, superintendent of poultry, for particulars.

The Akron Poultry Breeders' Club of Akron, Ohio, will hold a poultry show November 25 to 29, 1913, with Chas. McClave as judge. Write for premium list to C. M. Woodring, secretary, 176 Hillier avenue, Akron, Ohio.

The Terrebonne Agricultural and Live Stock Fair of Houma, La., will hold a poultry and pet stock show in connection with its annual fair, October 2 to 5, 1913.

# "Pittsburgh Perfect" Chicken & Rabbit Fence

**T**HIS style of "Pittsburgh Perfect" is the most unique chicken fence made. Not alone is it fine meshed—17 of the lower horizontal wires being only 1 inch apart—but it stands erect, even and firm throughout years of service, without buckling or sagging.

The upright wires are spaced 6 or 4 inches apart, as desired, and the whole fabric is

## Welded by Electricity

at every point where one wire touches another, producing a *one-piece fence*, the easiest of any to erect, adjusting itself over rough or hilly ground as easily as on level land.

The same high quality of special Open Hearth wire, heavily galvanized with pure zinc, is used in all "Pittsburgh Perfect" Fences. Write for new catalogue telling how to test wire, and showing the many different styles and sizes made for Field, Farm, Ranch, Lawn, Chicken, Poultry and Rabbit Yard and Garden purposes.

## PITTSBURGH STEEL CO., PITTSBURGH, PA.

"THE LARGEST PRODUCERS AND EXHIBITORS OF THIS ONE BREED IN AMERICA"

# ALDRICH

## WHITE ORPINGTONS

### The Strain of Quality

If you are counting on winning at your show, we can supply you with the **prize winning quality**, for we have this year the best birds that have ever been bred in America or England. We now have over 1,000 young birds of **supreme quality**, all hen hatched and raised—a marvelous perfection; nearly every bird has rich red eyes, a five-point comb, short shanks, wonderfully heavy bone, full round breast, broad back, with width carried well back, the **true Orpington type**, every bird being absolutely snow-white.

These birds were all bred from our finest males and females that have won prizes at all America's greatest shows: Chicago, Cleveland, Baltimore, **Madison Square Garden**, Allentown, St. Louis, Atlanta and Augusta, where, during

the past two seasons that we have exhibited, we have won a total of **110 out of the 300 prizes** offered, competing with over 2,000 of the best birds shown by exhibitors from thirty-six states, as well as from Canada and England.

Our win at the great Chicago show last December has **never been equalled**; we won the **display** with sixty-eight points against sixty-six to all the other competitors combined, also the **gold special for champion male**, and the **president's \$100 cup** and over nineteen other special prizes. Following this unrivalled triumph we carried off **five firsts** and ten other prizes at **New York and Baltimore** during the same week thus firmly establishing our claim to having the **Quality White Orpingtons of America**.

During the past season **our customers have won** at shows in all parts of America. At Boston, Atlanta, Wheeling, Columbus, Minneapolis, Louisville, Hagerstown, Little Rock, Shreveport, Nashville, Bismark, Springfield, Buffalo and at many others, and this year our customers have won at Winnipeg, Brandon and Grand Forks, thus proving that our birds will win in **any competition**.

Our young birds this year are **much superior** to those of last season, and many of our early hatched cockerels and pullets are now up to standard weight, and many of them were bred from our first prize cocks at Chicago, 1912, and first prize cockerel, New York, 1911. Every bird is conditioned, free of charge, by our superintendent, Mr. Rawnsley, and he cannot be beaten in conditioning birds, is the verdict of all who saw our display at the great shows.

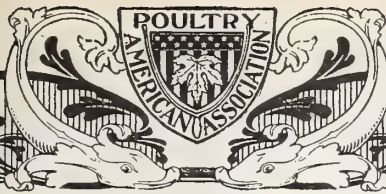

**Every bird** on our farm is personally **looked after, reared, selected and conditioned by the owners**, no outside help being depended on; we only breed the **highest quality White Orpingtons**, and in devoting **our entire time** to it lies the secret of our extraordinary success, and thus can we supply our quality at reasonable prices. We ship birds on approval, and **guarantee satisfaction**.

Let us quote you prices either on **show birds** or **large vigorous breeders**, to build up your flock. We will reserve you a winner, and condition same, on receipt of a **small deposit**, and would advise early inquiries as we only sell to one customer for a show.

Send for our 56-page catalogue, and you will become one of our many satisfied customers.

## American Poultry Association Annual Meeting

Five Hundred People Attended the 38th Annual Convention, Held at  
Atlantic City, N. J., August 11 to 16.

*By Prince T. Woods, M. D.*

FRANK E. HERING, of South Bend, Ind., told us at 1:30 o'clock good morning, immediately following the final adjournment of the Atlantic City convention, that he knew just how we would start our report of the meeting. Now, we are willing to wager him a large round dollar against a hole in a doughnut that he didn't expect the report to start in any such way. We have other reasons for beginning as we do. Some day the historian of the association will desire knowledge concerning when and where Mr. Hering first made a noise that made the members sit up and take notice. Now, of course this information may be contained in the expurgated official copy of the "Proceedings," but we are told that few read them, and some don't get any, so the historian may not, but we feel sure that he will have a file of American Poultry Journals to refer to.

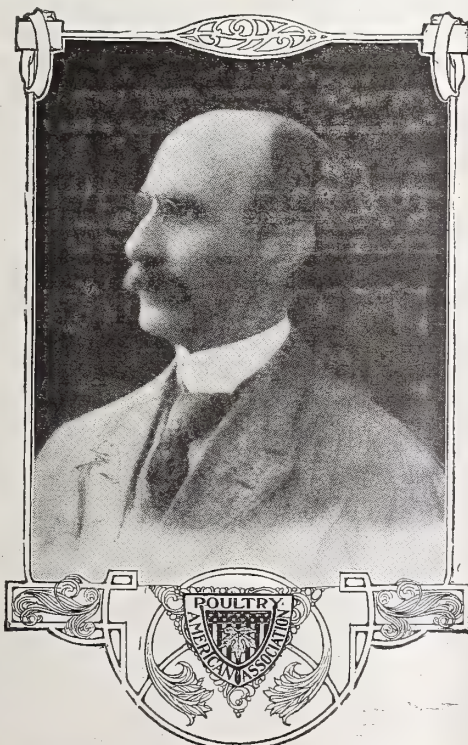

As George Monroe, the comedian says, "Be that as it may." The gentleman from Indiana was in the midst of the discussions as soon as the first meeting was regularly opened for business, and he staid in at every meeting of the series until the last gun was fired and the lights turned out on the pier, in the small hours of Saturday morning. At first there was a disposition on the part of the old-timers to resent the intrusion of a new member in a field that had for years carried with it patents of almost exclusive rights to oratory; but he was so very much in earnest, so whole-heartedly eager to be help-

ful and not destructive, and so eminently fair and square that he made a host of friends and finally received a vote of thanks from the association. We hope that his interest in poultry and in the association will continue and that at the next annual meeting, which ought to be held in Chicago, we will have another run of Hering (as we sometimes put it in the East). We hope to see him at work again on the floor of the convention and that he will have time to make a careful

study of poultry problems between now and then. If there are any more like him interested in poultry we hope that they will come into the association and get busy. The association and the poultry business needs them.

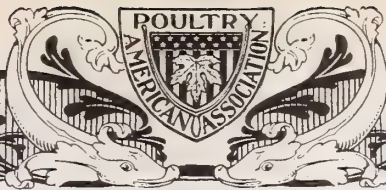

Friend reader, before you finish reading this report you may wonder where we got it. For your information we will say that for once we are going to report an A. P. A. meeting in a way that doesn't accord with the standard fashion. If you want the official version you can get it in the "Quarterly Bulletin" and "Proceedings" of the association.

We arrived in Atlantic City on Monday morning, August 11, about noon. After we surrendered all our spending money and a mortgage on our future salary for a room facing the ocean and board for the week in boardwalk hotel, we went to headquarters and were duly registered and labeled. After that we were assured that Mayor Riddle had promised that if any member of the association got into trouble he would

E. B. Thompson, President American Poultry Ass'n.

Members of the Executive Board of the American Poultry Association in attendance at the Atlantic City Convention.

get him out. After a few more hours in Atlantic City we became convinced that the assurance of the mayor was intended to be very comforting and we felt glad to know that we had someone back of us who would make it unnecessary to go home in a barrel in case the hotel men and others got our clothes after emptying the pockets.

It was a great week. We arose at 7 o'clock every morning and retired at anywhere from 1 to 3 o'clock the next morning. From 8 a.m. until midnight, and sometimes later (or earlier, as you please), there was something doing on the floor of the convention in the Greek Temple on the pier, and we didn't want to miss any of it—and we didn't miss much. We had to cut out taking any of the side trips proposed by the entertainment committee, though we would have liked to take them all in. Copy had to be prepared for this report, and we had a 400-mile broil in a Pullman to make before we could get into office harness and pound out our story. That is all the excuse we have to offer for the report as you read it. We'll entertain a motion to be forgiven and will further say that we are so saturated with parliamentary procedure and "Robert's Rules of Order" that we have to get a motion duly made, seconded, discussed, put, and carried before we dare eat a bite of breakfast—we don't want to make any grievous mistakes.

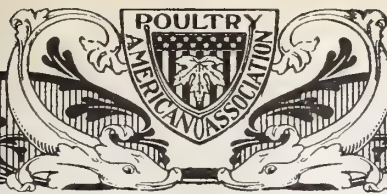

It was a great meeting, that thirty-eighth annual convention of the American Poultry Association on the Million Dollar Pier. Five hundred were enrolled on the official register, and that is a record-breaking attendance. Even if but little was accomplished in the business meetings and much hot air was turned loose in the debates, it was a good meeting, developed a lot of interest, and the exchange of ideas and the fellowship

was helpful. We were sorry not to get some of the lectures, but they had to be cut, or sidetracked to make way for the regular order of business and debates on various questions. The lectures will be published in the official proceedings.

We haven't attended a convention of the association since the last one held at Niagara Falls, until the one just closed. If all the meetings of the future hold as much interest as this one in the "Queen City by the Sea," we hope we won't have to miss any more of them. It may be, probably is, true that the important business is transacted, cut and dried behind closed doors in the executive board, but that will be changed some time, and in the meantime there is plenty to entertain and interest one in the open meetings to make it worth while.

Monday and Tuesday were devoted to executive sessions of the Executive Board, to registration of new arrivals, and getting acquainted. Tuesday evening there was an informal reception for the ladies of the convention at the Arlington Hotel. At the same time a "stag" smoker was given for the men in the Greek Temple on the Million Dollar Pier. During Monday and Tuesday members had an opportunity to see the sights of Atlantic City, and the Entertainment Committee furnished complimentary tickets for the various amusements and for chair rides on the boardwalk. We swore that we wouldn't ride in one of those hypertrophied go-carts, as we graduated from that style of conveyance over forty years ago, but our resolutions didn't make any difference—Mrs. Woods got us into one on the morning of our departure and we perambulated the length of the boardwalk and down through the town to the railroad station. It was early in the morning and we don't believe any member got a picture of the show. On arrival at the depot the customary proceedings fol-

lowing a morning ride in a perambulator were dispensed with, the committee in charge of the expedition having decided that we had long ago outgrown that method of receiving nourishment. We really would have felt more at ease if we had been duly spanked and "gone bye-bye." 'Nuff said!

President Reese V. Hicks called the convention to order promptly at 9:45 on Wednesday morning, August 13. The hoodoo date didn't worry anybody, and it was a big meeting. A telegram was read from President Woodrow Wilson expressing his regret at being unable to be present and his best wishes for a most successful convention. A letter of regret was read from Governor Joseph F. Fielder of New Jersey.

Charles D. Cleveland, of the New Jersey branch, in a brief address made everybody welcome. Right here we want to say that Mr. Cleveland worked hard and effectively to make everybody welcome, happy, and to see that they had a good time. He didn't confine his welcome to talking about it. We believe that everybody appreciated his efforts, and we know that we did. We never had an opportunity to get well acquainted with Mr. Cleveland before, but we had a mighty good chance to size him up during the convention week, and we were not disappointed. The coming winter he will make his debut as superintendent of the Madison Square Garden (New York) Show, and we expect to see him get results.

Mayor William Riddle of Atlantic City made an address of welcome and told how much money the denizens of the boardwalk city had made out of visitors like ourselves during the past few years. (Everybody believed him.) He also explained at some length how the Henry George single tax plan would prevent men like himself from accumulating so much "unearned increment" whereby he had gone beyond the million dollar mark in a very few years. (We believed that.) He closed by assuring everybody that the police had instructions to be courteous and lenient, and that he ran the town, anyway, and that if anybody got into trouble all they had to do was call him up at City Hall and he would get them out. (Somehow, after three days in the "burg," we didn't feel like taking any chances with that.) The mayor assured all of us that he is a poultryman and that he has a plant housing 175 Columbian Wyandottes on Albany avenue, near the beach. We are sorry we did not have time to look them over.

President Hicks responded for the association, and his remarks were pertinent and pithy. Mr. Hicks has certainly qualified as an able and fair presiding officer, and we hope that on retiring from the presidency he will not slow up in his activities on behalf of the organization. The association needs him in its business.

Roll call by states showed all sections of the United States well represented, and a delegate from Canada. The far West, middle West and South was well represented. Massachusetts had the largest delegation from New England, and Pennsylvania responded to the roll with the largest number from any one state and received applause. New Jersey, entertaining the convention, was a close second.

Dr. Lippman, director of the New Jersey Experimental Station, made an address in which he dwelt on the advantages of organized effort in poultry work. The usual routine business of the convention was then taken up. As the regular printed program was not followed because of time taken up in discussions and transaction of business, we will not attempt to report this conven-

tion by the regular daily sessions, as we have done in past conventions which we did not attend and wrote up from stenographic reports. Members who are opposed to the style of this report will please not read any further.

Chairman Wittman of the lecture bureau asked for an appropriation for the lecture bureau to be used in obtaining lantern slides on poultry subjects for loan to lecturers in promotion of work for poultry. After some debate the motion for an appropriation was amended to include the thousand dollars but to establish a Bureau on Lectures and Publicity for the purpose of promoting the dissemination of poultry instruction and to advertise the association. Grant M. Curtis spoke at length in favor of advertising the association, and said that no one could view Atlantic City from the boardwalk and fail to appreciate that "it pays to advertise." The matter was referred to the Executive Board.

A great deal of the time of the convention was taken up in listening to and discussing the proposed changes in the 1915 Standard of Perfection. We do not propose to report this matter at length. It will appear in the official reports, and it is sure to come up for further revision and more lengthy discussion at the 1914 meeting. It is too good an opportunity for advertising to be missed, and we can rest assured that it won't be overlooked at the next meeting. A good deal of time was wasted on advertising oratory of this sort, much of which had a familiar sameness, as if we had heard, or read, much the same thing before in reports of previous meetings. "Be that as it may," the discussions brought out a good deal of interest, even if they did consume valuable time, and not infrequently we felt that modern vaudeville has nothing on the convention antics when it comes to entertainment and amusement. Some of the men who talked most said the least, and some of those who said little made their points most effective.

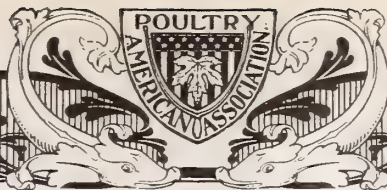

The convention "swatted" both "rooster" and "stag." Hereafter these terms will not be recognized by those who abide by the Standard, and will not be considered good form. Back-lotters will please take notice that hereafter the correct terms (as they have been for a long time, but "blushing unseen") are now, as always, officially cock, cockerel, hen, and pullet. "And there ye are."

The definition of "side sprig" stirred up a lot of debate. We believe that side sprigs always will cause dissention and discussion and some cussing. The pesky things are a nuisance and might well be swatted along with some other disqualifications. But, "be that as it may," some members were not going to permit side sprig to mean any old growth on a comb, and they had their way about it. Hereafter the disqualifying side sprig will be understood but not stood for as "A well-defined pointed growth on the side of a single comb."

All through the "glossary" the members waded deep and dove through the breakers, until, from the floor and by referring back to the committee, the definitions were made to suit the majority. If they are not again revised in 1914 you will get them in the 1915 Standard, which should be ready for mailing after the fall and winter shows in 1916, or later.

The revision committee, without due deference to the "old guard," had throughout the text substituted the term "breeder" for "fancier." The change brought out a lengthy discussion in the evening session, and it was voted to use the term breeder instead of fancier. We'll "fess up" right here and say that at the time

the word "breeder" appealed to us as the broader term and including the other. We owe it to Richard Oke and J. H. Drevenstedt that we have a better understanding of how the matter stands with them and with others of the "old guard." It isn't wholly a matter of sentiment, though that has much to do with it. In the morning session on Thursday the matter was again brought up for reconsideration. Some of the speakers had a notion that the price a man pays, or is willing to pay, for a specimen is what makes the fancier, but the old timers soon killed that idea and differentiated between the breeder, who may or may not be a fancier, and the fancier who fancies poultry for fancy's sake, a love of the beautiful and in the pursuit of an ideal. The old guard won. Hereafter the committee will use at discretion the terms fancier and breeder, one or both as may be needed and both terms will be defined in the glossary.

The attempt on part of Barred Plymouth Rock breeders to get a one-half pound reduction in the Standard weight of hen was lost after prolonged discussion. The Barred Rock men wanted to reduce the weights in all Plymouth Rock varieties and not to change the Barred variety alone, as they felt that it might work an injury to the Barred Rocks if the weight was reduced in that variety alone, but they were strong for the smaller hen. An attempt to reduce the weight of Rock males was lost, reconsidered and lost again. The weight of Plymouth Rock females will undoubtedly be brought up again at the next convention for reconsideration. Some of the Barred fancy are bound to have a 7-pound hen instead of a 7½-pound one. We believe that most breeders of White Rocks will be opposed to any reduction in weight, as several were who attended the convention. It is our personal opinion that it would be a great mistake to reduce weights in White Rocks. We have found the large hens in this variety to be just as good and even better layers than many of the small ones. In fact, we believe that size and weight does not necessarily have anything to do with fecundity. We have had quite a few big White Rocks and when we stock up again it is the big kind that we want, as we know from experience. We are content to see the Standard weights go without change but we certainly are opposed to any reduction in Standard weights. Personally we prefer 7 to 8-pound pullets and 9 to 10-pound hens in White Plymouth Rocks. To the breeder who thinks we can't find them we extend an invitation to visit some of the market plants of New England next February and March. The big ones may not be particularly plentiful or "average" specimens, but last March we saw a flock of nearly 2000 that would reach the weights we have named.

Standard weights in Leghorns were fixed at: Pullet, 3 pounds; hen, 4 pounds, cockerel, 4½ pounds; cock, 5½ pounds. The western delegates wanted heavier females, particularly pullets but their motion did not carry.

Bleaching plumage and faking were made a misdemeanor and disqualification, and hereafter any exhibitor indulging in such practice may be punished and his specimens debarred from exhibition.

The report of the Committee on Plymouth Rock Breed Standard, showed no expenditures and little progress. This committee is in a measure tied up in its work until the 1915 Standard revision work is completed. There was considerable debate on the advisability of publishing separate breed standards and par-

ticularly the first of the series the Plymouth Rock Breed Standard. A good many members were opposed to the separate breed standards on the ground that they would not pay. Mr. Curtis took the floor in a vigorous speech in favor of separate breed standards. He believed that they would pay well and were needed. He was so positive concerning the financial value of a properly made and published breed book that he offered the association \$50,000 for the exclusive right to publish breed standards, authorized by the association, for a period of 10 years and said he would have them on the market in a comparatively short time. His offer was not taken, but it helped to convince a good many members that publishing breed standards will pay if gone about in the right way and if the right sort of material is put into the books. This matter was ruled out of order as the association voted at a previous meeting to continue the work of the committee and fixed the date for a portion of its work as following the completion of 1915 Standard revision.

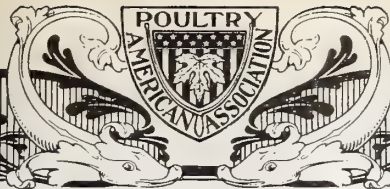

The only lectures programmed which were actually given in the convention hall were a talk on "Breeding for Egg Production," by Dr. Raymond Pearl of Maine, one by Prof. A. L. Clark on "Improving the Flock" and one by Judge W. H. Card on "Fundamentals in Fancy Poultry Breeding." It was announced that the other lectures on the program would be given at the Hotel Dennis, but most of the members remained in close attendance on the business meetings in the convention hall. The lectures are to be published in the "Proceedings."

In the Executive Board meetings it was decided not to introduce the subject of changing the name of Rhode Island Reds by dropping the words Rhode Island. There was a vigorous protest against any change of name and it was finally decided to put the matter to a mail vote. We hope that the name will not be changed. Rhode Island Red has a meaning all its own and the variety has been well advertised under that name. It would be poor business to drop the "Rhode Island" and we believe a big mistake. It would be just as poor judgment to drop the word "Plymouth" from the name of the Plymouth Rocks. A board member reported to us that J. J. Wingent had been suspended pending settlement of a difference with a customer. T. Reid Parish, Nashville, Tenn., had license revoked and was expelled from the association for alleged violation of copyright and his attitude toward the board when censured at the Nashville meeting. C. A. Dobbs, Gainesville, Ga., was expelled because of alleged refusal to settle certain unpaid accounts.

The association voted to allow Secretary Campbell \$25 per month rent for the American Poultry Association offices. It was also voted to buy the secretary a fire proof safe and suitable filing cabinets.

"Rule 17, Jr." came up for some warm discussion. After everybody had talked their fill and Editor DeLancy had delivered a "steen" page typewritten oration in favor of the rule, G. M. Curtis rose and advised everybody subject to heart failure to leave the hall as he was about to talk in favor of the rule. As he was the father of the original "Rule 17" and introduced the original rule to the association, it was not necessary to adjourn the meeting to carry out the wounded. It afforded a nice opportunity to rehash some of the oratory that has held at least one previous convention spellbound and it provided for some nice free advertising for "solicitor judges," artists, maga-

zines, etc., whether they happen to belong to Mr. Curtis or some one else. And it goes into the record and keeps them all before the association and it is too good to lose and will undoubtedly be discussed a lot more next year. Anyhow it is harmless and ineffective and means nothing as it stands. Here is the "Rule 17, Jr.," as passed:

"That no man or woman who is connected with any poultry publication or periodical carrying poultry advertising be permitted to solicit advertising at any show held under the rules of the American Poultry Association at which he or she may judge. This rule becomes effective July 1, 1914."

This rule was supported by the Pennsylvania Branch. The joke is that it never can be effective as it cannot and does not prohibit soliciting anywhere except at the show and the solicitor judge can solicit at his discretion in hotels or any place outside the show where he now gets many of the big contracts. Also it does not become effective until all of the shows are over that will be held before the 1914 convention. It can then come up for further discussion and furnish some more nice free advertising and an outlet for pent up hot air. There is nothing like having a good hardy perennial to depend on, other subjects to talk on might run dry, but this is like Tennyson's "Brook":—

"For men may come and men may go,  
But I go on for ever."

The newly elected officers of the association were inaugurated on Friday evening. Retiring President Reese V. Hicks made a brief address thanking the association for its consideration and helpfulness during his term of office and stated that he had found much pleasure in his work for the association. President E. B. Thompson after inauguration made a brief address and afterward turned the chair over to Vice-President Peters, who also addressed the meeting at some length. Secretary Campbell expressed his appreciation of the hearty support he received for re-election and told of the progress of the association and its great increase in membership and financial prosperity. Votes of thanks were taken for the retiring officers. A vote of thanks was given to Grant M. Curtis for work done for the good of the association during the convention and another similar vote of thanks was unanimously given to Frank E. Hering, of South Bend, Ind., for his earnest and helpful work during the convention. The new Jersey State Branch was likewise formally thanked for its entertainment of the convention and votes of thanks were passed for the various lecturers. The convention reached a final adjournment shortly after one o'clock in the morning on Saturday, August 16th. Everybody tired, but happy and the best of friends. All hatchets and hammers thrown overboard from the end of the pier in six fathoms of ocean water, no diving permitted.

Saturday, such members as were not obliged to hurry home, took in interesting side trips visiting New Jersey poultry plants. A roast duck dinner was served to A. P. A. members at Rancocas Farms and Laurelton Farms, 40,000 fowl capacity at Lakewood, gave a chicken dinner to visiting members. We had to hustle home and write this screed and so missed them both, which may account for the style in which it is written. Following are the amendments passed:

#### Amend Article IV, Officers, Section 2.

The Executive Board shall consist of the President, Vice-Presidents, Secretary and nine elective members, together with the Presidents of all accredited Branch Associations. In the absence of the President of any Branch a member of the Branch, having credentials signed by the President and the Secretary of the Branch shall be entitled to serve on the Executive Board and perform all duties required of the President of the Branch. These credentials must show that the Branch Association has held a regular meeting within one year, and that the alternate representing the President and the Branch is a member in good standing.

Amend Article VI, Sec. 23, by inserting the words "not oftener than" just before "once in five years," of the last line, so as to make it read:

"It shall appoint, instruct and control the Standing Committee on Revision of the American Standard of Perfection and take the initiative in providing for a revision of the American Standard of Perfection not oftener than once in five years."

Amend Article VI, Sec. 38, by inserting "not oftener than" before "once in five years," in the last line, so as to make it read:

"At least one year before the time for a general revision of the American Standard of Perfection all such information, suggestions and requests shall be classified by this committee, and placed in convenient form for adoption or rejection by the Association at its annual meeting, or by a general revision committee to be appointed by the Association. This Standing Committee on Revision shall make an annual report to the Executive Board, and shall be made members of the general committee on revision to be appointed by the Association not oftener than once in five years."

Amend Article X, Sec. 1, by inserting "not oftener than" just before "once in five years," in the last line, and removing the last words, "and not oftener," from that line, so as to make it read:

"A general revision of the American Standard of Perfection shall take place not oftener than once in five years."

Amend Article III, Sec. 5, to read: "The Secretary shall drop from his mailing list any members who have failed to vote at the two preceding elections, provided such members shall first be notified by letter, to their last known address that their names will be dropped unless they in writing request that their names be retained on the list. Provided any name may be restored to the list by giving notice to the Secretary in writing that he desires to receive ballots, Bulletins and other literature."

Amend Article IV, Sec. 4, to read as follows: "The Finance Committee shall consist of the President, who shall be chairman, the retiring President and one elective member of the Executive Board, and shall serve for one year. In case of a President succeeding himself, the third member shall be elected by the Executive Board by ballot, from among the elective members."

#### Renumber all sections of the present Show Rules.

Amend the present Section 1 of said rules so as to read as follows: "Section 2. Entries shall close the day and hour advertised (entries bearing the post mark of that day being eligible). All entry fees must be paid on or before the date of the closing of entries, except in exceptional instances. Any Association violating this section shall forfeit its membership."

Following is a list of the various committees of the New Jersey State Branch that made the Atlantic City Convention so enjoyable for everybody:

President, J. Harry Wolsieffer, Vineland; 1st vice-president, Louis G. Heller, Bridgeton; 2d vice-president, Fred Huyler, Peapack; treasurer, Philip Kearney, Florham Park; secretary, Sydney R. Clarke, Harmony Park, Scotch Plains.

Executive committee—Chairman, Harry R. Lewis, New Brunswick; Rufus Delafield, South Plainfield; J. C. Punderford, Freneau; M. R. Jacobus, Ridgefield, N. J.; C. D. Cleveland, Eatontown, N. J.

Finance committee—Chairman, Philip Kearney, Florham Park; Rufus Delafield, South Plainfield; J. C. Punderford, Freneau; Sydney R. Clarke, Harmony Park, Scotch Plains.

Railroad and transportation committee—Chairman, E. R. Collins, Westfield; F. J. Seton, Princeton; Howard L. Davis, New Egypt.

Program committee—Chairman, H. R. Lewis, New Brunswick; W. H. Bidgood; Howard Seaver, Brown's Mills; F. H. Gillingham, Bloomfield; A. L. Clarke, New Brunswick.

Badge committee—Chairman, W. H. Taverner, Westfield; Henry Schnitzer, Fairton; H. S. Hill, Campgaw; Charles Staff, Florham Park.

Entertainment committee—Chairman, William T. Rainey, Caldwell; Percy A. Cooke, Scotch Plains; A. B. Dalby, Redbank; E. L. Geisel, Morganville; Henry Hales, Ridgewood; James Glascoe, Mahwah; A. A. Hunter, Merchantville; Charles Nixon, Washington; William A. Smith, Metuchen; E. E. Alt-house, Sellersville, Pa.; John Murkin, Heidelberg Bldg., Broadway and 42nd street.

# Impressions of the Annual Convention

Interest and Enthusiasm of Those in Attendance Apparent During the Meeting of  
the American Poultry Association at Atlantic City.

By Helen T. Woods

THE COMING TOGETHER of men and women from widely separated communities for the advancement of a mutual interest is in itself an education, the benefits of which are far-reaching and beyond compute. From the time of the opening session of the American Poultry Association Convention at Atlantic City on August 13th until its adjournment on Saturday, August 16th, at 1:30 a. m., this fact was most apparent. In numbers in attendance as well as in unquestionable interest and enthusiasm in the proceedings, the Atlantic City Convention should go down on record as the beginning of a new and broader usefulness than that which the association has heretofore enjoyed. The closing meetings were especially pregnant with this fact.

In taking the convention to Atlantic City, it was the opinion of many that because of the numerous other attractions at this popular resort, the attendance at the meetings would be small, especially since practically the entire time was given over to the transaction of business, but this proved not to be the case. The attendance at the meetings was nothing short of extraordinary.

I had the honor, and I will add privilege, of attending all of these meetings and I feel that could the five thousand and more members of the association realize the importance and tangible worth of these meetings, the attendance would be nearer five thousand than five hundred as was the case, with the membership increased accordingly. With the extent to which the poultry industry has progressed during the past decade, and considering the vast numbers of people who are actively engaged in the pursuit of poultry culture, the American Poultry Association must inevitably double and triple and quadruple its present membership. The association is no longer narrowed down to the interests of strictly fancy poultry, which in the beginning made it possible. The day has passed when humanity felt called upon to continue along a narrow line drawn by their fathers. Today every broadminded son of Adam is ready to remove a barrier from the path of the coming generation that thwarted his earlier undertakings. Down to date there are only a few things that have been absolutely proven and we are willing to accept these; but the extent of human ability and human accomplishment, the development of the mind and the latent forces of mankind, remain as an unsolved problem for each individual to work out his own salvation. What the mind can conceive, it can in time work out; and this getting together and discussing the future possibilities of the breeding and rearing of poultry is the best thing that can happen for the advancement of the poultry industry today. It is not in line with progress to make any hard and fast rules along lines about which we know little or nothing, and the day will never come when intelligent men and women will believe a thing because someone told them so. At least it isn't in the spirit of Americanism. Over four hundred years ago Columbus proved his case, and every day men and women are doing the same. When the day comes that we will only attempt such things as have proved successful with others, the process of evolution stops and destruction begins. If innovations had been tabooed in the human family, we would still be in the Garden of Eden wearing fig leaves. The thinking poultryman wherever he may be is willing to take the hard

knocks that are inevitable in proving his case for he realizes first and always that there can be no progress without such a stand.

The discussion relative to the use of the words "fancier" or "breeder" in the text of the revised Standard brought out the fact that in the minds of at least a majority of those present, the word fancier was not broad enough to cover the field today, and in no way was this more forcibly brought to mind than in the statement by one gentleman in his definition of the word "fancier, a breeder of fancy fowls," with the result that both words will be used in the text at the discretion of the committee.

I heard the remark made by a member of the association that the first meeting he attended appeared to him as nothing more than "a play of words" and he was beginning to question the advisability of further attendance at the meetings, but the very earnestness with which these men and women were working for a creditable future for the association so impressed him that he was soon as enthusiastically interested as any man there. Now, that is the rare quality that the American Poultry Association is in possession of at the present time—the interest and enthusiasm of its members. And having it in a pronounced form, there is no limit to the possible future accomplishments of the organization. The members who, frequently in hot debate, remained night after night in the Greek Temple to fight against detrimental action, or to strengthen desirable changes for the future good of the organization did so through no expectation of personal gain or personal aggrandizement, but through actual desire for the Association's best good and future growth. There was no one thing so pleasing to the observer in attendance at these meetings as the impersonal interest displayed by its members. It was everywhere apparent that all were working for the Association's best good regardless of any man's gain, which shows that the members of the A. P. A. have reached a desired stage in their development—that of realizing that there is work enough and opportunity enough for all the minds and all the hands, and that the greater the interest and growth of an industry, the greater good for all.

Probably few of us realize the worth of an effort born of sincerity. Taking hold of a matter in a half-hearted, lackadaisical fashion will seldom if ever culminate in the success of an undertaking. The sincerity of purpose is after all what counts, and no matter how small the effort, if it is honest and sincere, the impression is bound to be worth while. The sincerity of purpose of the men in attendance at the Atlantic City convention was felt by all observers. And we need more such men. Mr. Cleveland, of the New Jersey State Branch (let us hope we may soon say the American Poultry

Association of New Jersey, following the initial step in that direction taken by Mr. Byce of California), deserves much credit for the concerted sincerity of purpose at all times in evidence at this convention. A man of high purpose and pronounced earnestness and one whose efforts in behalf of the best good of the organization will be of lasting benefit. And he with such men as Mr. Hicks, Mr. Peters, Mr. Hering, Mr. Collier, Mr. Curtis and many others whose names I do not now recall, can by

Headquarters of the American Poultry Association at Atlantic City.

MEMBERS OF THE AMERICAN POULTRY ASSOCIATION IN ATTENDANCE AT THE 38TH ANNUAL CONVENTION, ATLANTIC CITY, N. J.

Poultry Association what any amount of mere boosting cannot do. Such men can infuse into the most stagnant-minded listener something of the tremendous scope and broadening opportunities made possible by the American Poultry Association.

A convention of this kind will give us all food for thought for many days. To be sure we are glad to be back on the farm, and we could not stand Atlantic City indefinitely for other reasons than pecuniary ones. But I feel that we all got our money's worth and that we can draw interest on the investment for a long time to come. I recall numerous interesting and sometimes humorous discussions outside the regular scheduled meetings while coming and going on the pier. It will be recalled that an interesting discussion was cut short at the time an intermission was taken for the purpose of having the official photograph made, and one of the speakers in talking with a little group near where I stood went on to say that the A. P. A. had reached the stage where it could not afford to stand on record as opposed to a concerted effort toward progress in its affairs. "What I thought or what you thought ten years ago about this organization does not count today. The time has come when everything must be laid bare and things valued at their real worth," continued the speaker. A little lady standing by her tall escort made the remark in a stage whisper that she believed in progress, but she hoped the

speaker did not mean that eggs would be laid without the customary shells on. Which accounts for many of the smiling countenances in the official photograph. Some of those assembled did not hear it, which accounts for the others.

At the meetings in the Greek Temple it was sometimes a little confusing unless one sat "well up front," for the conversation from about the outer steps competed with the regular order of business in the matter of interest. I overheard one such conversation in regard to a new breed of fowls which are to make their appearance in the show room before many seasons. As layers to date they eclipse any breed now before the public and in fixing their type, etc., their owner fears that this characteristic may be lost, so he has named them the "Macduff" fowl and regularly quotes Shakespeare to them. At this point the clang of the flinty gavel in the hands of the ubiquitous Mr. Hopper brought the body, both inside and outside the portals of the Greek Temple, to attention and the regular order of business proceeded.

As one attending the convention of the A. P. A. for the first time, I will say that whether the future meetings of the Association are held in Chicago, Washington, San Antonio, San Francisco or Nome, Alaska, I shall hope to meet you all there, and thousands more of our countrymen and women who are interested in better poultry and more of it.

## When the Slogan Should Be Vigor

Take Time to Study Your Birds—Selection Must Be Pursued with Fidelity—  
Vigorous Fowls Necessary to procure Vigorous Eggs

By H. H. Stoddard

**T**O HAVE VIGOROUS fowls, hatch them from vigorous eggs; but vigorous eggs cannot be procured except from vigorous fowls. How shall the utility breeder commence when he seeks to stock up a new commercial plant? It is like finding the beginning or the end of a ring.

In the vegetable kingdom there are all degrees of strength. By this we mean that a plant may have some seeds that are plump and well filled and which contain the germs of future generations of plants which if placed in the earth will germinate and produce their kind,

while there are other seeds that are shriveled and shrunken and will not grow, although at first sight they do not, to any great extent, appear inferior to the plumpest and best specimens, aside from their dried-up appearance. At the other end of the series they are mere hulls with not a vestige of any meat or kernel to give any promise of reproduction of their species.

Between the extremes of the empty hull and the plumpest grain there is a series embracing every gradation. It has been found by experiment that even if the same conditions of soil, warmth and moisture are present, some grains give healthy plants which reach maturity, while others just start to grow a little and then die without making their way to the surface of the soil where they might receive the genial rays of the sun.

There is something very much akin to this in the hatching of eggs. There are some that are perfectly and absolutely barren, there are some that are capable of producing

### Vigorous Chickens,

and between these extremes there is every shade and grade. Many poultrymen find chickens dead in the shell. Some die after the egg has been sat on eighteen, nineteen or twenty days, and the chick appears full sized and ready to burst the shell; some, however, die in the twelfth or fifteenth day and some on the fifth day. In some cases it appears as though the germinal speck just started in its growth and was then nipped in the bud.

When a poultryman of an inquiring turn of mind breaks the eggs that have failed to hatch he finds the germs in every stage of growth, from the first trace of organization up

to the apparently perfectly formed chick, which looks as if all it had to do was to break the shell and be warmed and dried in order to run around and pick up its own living.

There are many cases of arrested development and death in the shell at different stages that cannot be attributed to any treatment which the eggs have received after they have been put under the sitting hen or into the incubator; for other eggs subjected to exactly the same treatment, hatch and produce vigorous chickens. Now what is the reason for all this? Surely is it not the character bestowed upon it by the hen that laid it, or the sire that fertilized it, or both? There is such a thing as inherent weakness which the egg receives before it is laid and which gives a tendency to the germ to die before it has become very much developed.

The breeder should aim to keep his stock so strong and vigorous and subject them to such favorable conditions during the term he is using them for breeding purposes that every germ encased so neatly in its cell shall be essentially strong and vigorous. It does not need that the breeding stock should be actually sick in order to impress a feeble and degenerate condition on the eggs. The fowls may be apparently in perfect health, yet their eggs may have become impaired by insufficient diet, or by a wrong kind, or by too much laying. Possibly, too, by descent from an ancestry of phenomenal layers that have begun to be "improved off the face of the earth." Green food is very conducive to the inherited strength of the germs from the parent stock. Also plenty of exercise, running, and scratching such as fowls get when they have plenty of range, has an influence upon the strength of the chickens.

But all the suitable food and management, and all the running and scratching possible will never produce healthy, normal eggs unless the layers of the eggs are healthy and normal, and such layers, in the first place, can never exist except as hatched from healthy, normal chicks. And there you are again.

The time gained by the use of labor-saving devices should be largely employed in scrutinizing breeding stock. As far as a particular shape of a fowl indicates good laying qualities, that is all poppycock—so far as I know, down to date, though I am open to conviction. But there are visible tokens of health and vigor.

In every poultry yard there will be quite a difference, discernible to the trained eye in the carriage and activity of

the several fowls. To the untrained observer they look exactly alike. He can see no difference in them. This similarity in the midst of difference is what every breeder takes for granted.

#### Pick Them Out.

The experienced keeper never expects to have his fowls exactly alike. No two human beings in all the millions that inhabit this globe, no two leaves in the forest, no two peas, beans, grains of wheat or kernels of corn in all the bushels that are annually gathered from the nourishing bosom of Mother Earth, no two sheep in the many flocks that bleat upon the grassy hillsides, and no two cattle of the many herds that come lowing up the lane when night drops her jeweled curtain down, can be found alike in every particular.

If the egg farmer cannot tell (give him time to observe leisurely) which birds show the signs of health and vigor, he is badly handicapped surely. These signs, many of them, can be but poorly described in words. You cannot put in words the peculiarities by which you recognize different persons, yet you know them well enough, and, for that matter, so does a child or even a dog. There are in fowls some outward signs of vitality that may be described. In all breeds, but especially Leghorns, alertness and sprightliness of movement are significant. In the cock, frequent crowing and talking to the flock, and in the hens prolonged and loud craking are good signs. Combs and wattles of both sexes quite large in proportion to the size of the bird are desirable. But some of the most important signs of vigor cannot be described either by the writer's pen or the artist's pencil.

#### Take Time.

There is nothing you can do in the poultry business that will pay so well as to "loaf and invite your soul" by sauntering around in the flocks of pullets and cockerels respectively, selecting birds.

After the culling do not let your scrutiny stop there. Keep throwing out, month after month, from your choicest flock, all which, as they develop, fail to answer first expectations. Selection must be pursued with the fidelity which the navigator bestows upon the course of his ship.

W. H. Rudd, one of the most eminent of the old timers, resigned a good position which he had held for twenty years, to start a poultry plant which he stuck to for forty years, and at the beginning bought three hundred fowls, studied them carefully by spells, for a week, and threw out one hundred. Two weeks of study at the next pull, and he threw out another hundred. Utility was the criterion, no attention being given to Standard points. The remaining hundred birds formed the foundation of the work of himself and sons for more than a generation while they were building up the greatest poultry firm in Massachusetts.

To hit the high places in utility, poultry breeding requires the keeping of a register in which the names of the breeding stock are entered, an account of matings preserved and an entry made of chicks reared. As a matter of course a goodly amount of punching must be done, or using rings. It is a little trouble to do these things, but not so much as is generally imagined.

It has been objected that as ten to fifteen or more hens usually run with one cock, and as eggs are so nearly alike, it would be very difficult to tell which egg was laid by a given hen; the keeping of a pedigree book becomes an impossibility or if not, a troublesome and complicated affair anyhow, even with the aid of trap nests.

But the objection is not valid and is very easily overcome. The best method and the one employed by some skillful breeders, is to make up a pen, the females of which are full sisters, and give them collectively one name. With them is placed a cock which is also named. The record for the pen would then stand, "Sire, Horace; dam, Susan," and the chicks hatched from the eggs of that pen would be recorded as sired by Horace and out of Susan. The next season a squad of these pullets might be selected and collectively named, say Corona, and mated to a cock named Peter.

#### The Advantage

of keeping such a record consists in the ability of at once tracing the introduction of new blood, and of being able to prove the quality of the stock. A breeder may know that

his stock is carefully bred, but may not always be able to convince others of the fact. But with his carefully kept record he will be able to convince the most skeptical.

A still further advantage of keeping a record is that it enables one to trace the causes which produced given results. One mating has proved more satisfactory than another. Why was this so? The pedigree record tells the story. By referring to it the clue is found, and as a corollary to this the breeder seeks in the future to make such matings as have proved satisfactory in the past. He learns to be a better breeder because of keeping such a record.

These and other advantages of keeping a pedigree book ought to lead more breeders to take the little trouble and the trifling expense that it entails, for in addition to the greater pleasure it gives to the owner of stock whose pedigree can be traced through a long line of ancestors, a remarkable benefit may turn up if it chances that you find that later generations revert to some particular prepotent ancestor and fortunate nick. Then you will seek other crosses with that special strain.

There is no rural pastime or hobby that on the whole is so well adapted to the great millions of people as keeping poultry, and they must be Standard bred to yield the highest enjoyment, and the keeper absolutely must own a copy of the Standard if full benefits are to be gained. Its perusal adds immensely to the pastime.

When, however, we take up the fancy poultry business or the keeping of a small flock of fowls with a view to careful breeding and the improvement of the strain, it will be found that it is very difficult to get anybody outside of the family of the breeder who will give the very careful and minute attention necessary to insure success. The hired helper is very apt to perform his work in a mechanical way. To attend to a small flock of choice fowls in a proper manner there should be stimulus of ownership. This counts for a good deal. The attendant should be a fancier himself and take a personal interest in his charge. There are a great many poultry breeders whose business takes them away from home a great deal of time, and who experience great difficulty in finding assistants to take charge of their fowls when they are away.

To hire a man to attend to your fowls while you are away in your office or store is almost like having a

#### Wooden Man

to be wound up like clock work to do the business for you. Some things can be done by proxy very well, but you cannot very well employ another party to eat your dinner for you or attend a concert in your behalf. Neither can you be an amateur poultry fancier by proxy.

In case the fancier is so situated that he can attend to his pets himself, he reaps the full reward of the pastime. We mean that if he does everything with his own head and his own hands he will enjoy all there is in the hobby. Oftentimes the gardener of the millionaire who takes care of the flowers on the grounds of the latter enjoys ten times as much in their contemplation as the owner himself. When he has planted and weeded and watered and cared for a plant and seen it develop to the full blossoming stage, he appreciates it more thoroughly than anyone else can who bestows upon it a mere passing glance now and then. Just so in the poultry yard, to appreciate chickens completely one must have set the hen himself, removed the younglings from the nest and watched over every stage of their growth. They are then the most nearly his own. He bred them, he reared them and they are almost a creation of his.

Generally speaking, the growing, preparing and distributing of green food, just as it should be done, to young and old, consumes more time than any other single job on the ranch, take the year through. The principal work on an egg farm is not in the general care of a great number of laying fowls, but in hatching and rearing chicks up to the time they are able to perch, and in gathering, packing and shipping eggs.

A great deal of study is necessary in the management of chicks about the size of quails after they have been weaned and before they are big enough to perch upon the roosts at night with the older fowls.

#### After Weaning

you should provide a house or coop three or four feet in

height, and arrange it so that not too many will bunch together. They will huddle up in this too closely if the nights are cool, hence the necessity of the oft-repeated advice to not keep too many together. The apartment must be kept sweet and clean. If you are afraid of skunks or other marauders, you must have a tight board floor to your pen, and have a liberal opening near the top and another near the bottom for ventilation. These openings may be covered with wire netting.

The doors for the exit of your chicks must be fastened securely, and then you may feel confident that you will be able to bid defiance to all marauders. The great danger is insufficient ventilation and too much crowding. Your chicks are growing faster at this stage than before, and they will

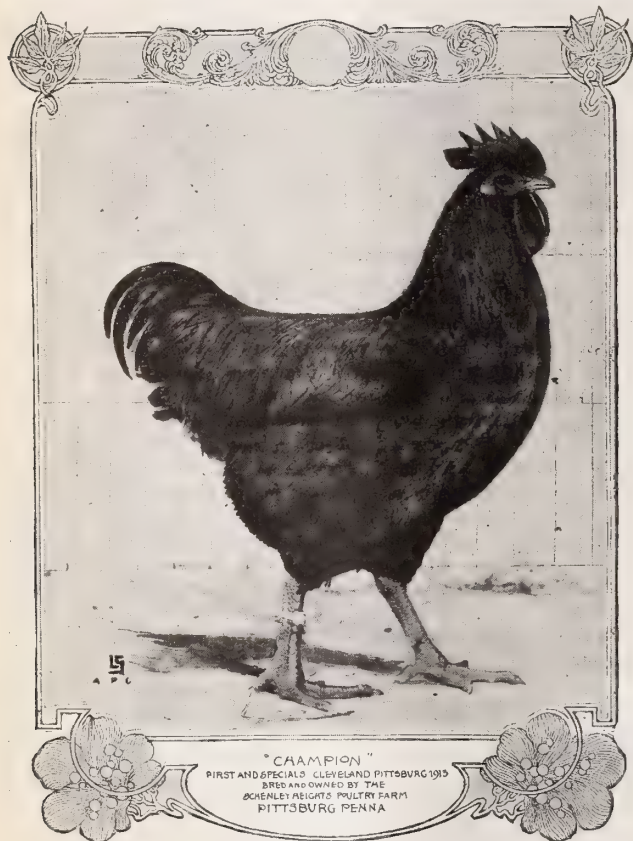

creature cannot be safely inferred from the appearance of a dead one. That carbonic acid gas would have to be present before the transmutation could be possible, but that almost everywhere in the system more or less of that agent was liable to be present., etc., etc.

I made up my mind that bones and oyster shells should be given, for, anyhow, they would be as innocent as a sucking dove whether they did any good or not.

All wild birds in a state of liberty are able to get enough lime from the natural food which they procure to answer the requirements of the system in the formation of egg shells. But they have an unrestricted diet, being able to select every kind of food, and mineral matter also, that are to be found anywhere on their beat. In this way they get enough lime, besides they do not lay any more eggs than they can cover for incubation, and therefore need comparatively little egg shell material.

Our domesticated birds have, however, acquired a habit of prolific laying that has become a sort of second nature. With this great demand for shell material goes, in many cases, a restricted range and a restricted diet, unlimited in quantity perhaps, but lacking a great many things that the wild birds can easily pick up. Hence, to be on the safe side, lime in some special form should not be omitted. Of course, as has been said, all grains and vegetables contain a considerable quantity of lime, but the fact that laying fowls will devour shells and bones greedily apparently shows that they do not get enough of this ingredient in their grain.

Every poultry keeper knows that occasionally a fowl in a flock will lay soft-shelled eggs, which are not only valueless for the purpose of incubation, but are often broken in

fill up your coop before you know it, almost. When they get to be one-third grown, you must encourage them to roost by putting small sticks across the coop, at a distance of twelve or fifteen inches from the floor.

As soon as they have fairly learned to abandon the floor altogether in favor of the low perches, move them to perches of the regulation height, the sooner the better.

In regard to the lime question, I remember that years ago a thoroughly honorable and every way admirable man, P. H. Jacobs, was editor of the first weekly poultry paper in America, *The Fanciers' Journal*, and also a learned chemist. For years he contended that fowls could not get lime for their egg shells from bones and oyster shells, but only from such foods as wheat, clover and so on. That they devoured shells and bones for the same reason that they devoured bits of quartz or ivory, diamonds if obtainable, and rather small bits of anything hard—white substances being preferred.

When living where I had the run of a medical college, I asked the professors of physiology, also professors of chemistry, whether carbonate of lime, in the form of oyster shell, could be assimilated and by the alchemy of nature transmuted to the shell of a bird's egg. They said that a chemist could do little in the realm of the subtle processes of metabolism, because these were carried on in a living organism beyond the reach of the investigator, in spite of all the assistance vivisection affords. If a dead organism was studied the normal processes were interfered with by the fact of death or, in other words, the workings of a live

the nests, and then this state of things brings about the vice of egg-eating. A great deal has been said and written about the cause of soft-shelled eggs, but we remark here that it is not necessarily in every case a scarcity of shell material, but it may be a diseased or impaired state of the reproductive system of the bird which occasions these soft shells. It has been noticed that soft shells are laid by fowls that have been injured through some accident, and sometimes apparently the trouble is caused by long continued laying, which seems to make such a demand on the stock of vitality as to cause derangements. Hence we receive many times in the course of a year letters asking, "What is the matter with my fowls? They have all they want to eat, plenty of

oyster shells, pounded bones, old mortar, and so forth, yet they lay thin-shelled eggs."

In such cases the remedy is to pay attention to the general health, change the method of feeding, and give plenty of green food if you have not already been doing so. Look well to all the conditions of health, such as out of doors exercise, air and sunshine. In some cases a cure will not be effected till after the fowl has completed her laying and had a resting spell.

In regard to the supply of egg-shell material, if you live near the seashore there is little difficulty; you can collect the material yourself on the beach; or if you are away from the coast, shells may be shipped at an expense of less than half a dollar per barrel, probably, for quite a distance into the

quite a number of fowls are kept. Scatter your oyster shells on a roadway, on or near your premises. In a few days if there is considerable travel, they will be pulverized completely, when they may be taken away and carried to the poultry house. It matters little how finely they may be ground, for the fowls will pick up the smallest particles.

The packing houses sell ground bone free from any animal matter that is subject to decay, screened to any desired coarseness (from ordinary coarse sand size up) and it will keep well. Whether this or ground oyster shell is best, prices of both considered, I wish I knew. Will the Stations tell?

Bones are useful to serve the same purpose as shells, both containing lime in the form of a carbonate, but in case of

Bungalow in a grove on Monmouth Farms, Freneau, N. J. Here 300 selected S. C. Buff and White Leghorn cockerels are provided with plenty of shade and free range. Ideal conditions for maturing active, vigorous breeding males with hardy constitution and great stamina and reproductive powers.

interior by freight. As most of our readers know, oyster shells are sent for this purpose from the towns where a great quantity of oysters are opened, the shells having first been ground by parties who make this a business. Also, old shells of minute species of mollusks are barreled for shipment, which from their small size do not need to be pulverized.

Those who live so far in the interior that freight from seashore is too high can resort to the nearest town of considerable size in their neighborhood and engage from a restaurant whole oyster shells which accumulate from time to time, so that a wagon load or more may be carried away at once. When they are hauled to the poultry keeper's premises the problem is how to reduce them to a suitable size. Given a sledge hammer and a flat rock, and a pair of strong arms will do the business, but there is a better way than this, if

green raw bone there are some objections to lime in this form. If the bones are perfectly fresh and sweet, as they may be in winter, whether they may be run through a bone cutter and the animal matter which they contain is no objection, but rather an advantage, as fresh bones contain both albumen and fatty matter, the latter predominating, and therefore form quite a nutritious item in the fowl's diet. But in warm weather raw bones soon spoil and are worse than nothing for the fowls. The remedy when bones have become rancid is to burn them, when the objectionable matter is consumed, leaving the carbonate of lime in such a state that it will keep for an indefinite period.

We guarantee our subscribers against loss due to fraudulent misrepresentation in any display advertisement appearing in the American Poultry Journal, providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in the American Poultry Journal, and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it occurs.

## Day Old Chicks

To remove any doubt as to who is directly responsible for this editorial I shall sign it and make use of the first personal pronoun. By this time my position in regard to poultry health and hygiene and my work for poultry health, vigor and vitality, should be fairly well known. I do not believe my sincerity will be questioned and I have no axe to grind.

In the closing hours of the 38th annual meeting of the American Poultry Association, at Atlantic City, when everybody was tired out with long sessions and hot air discussions, a resolution was presented to the Association, which, if it had been adopted, might well have proved suicidal for the organization. The resolution had the support of a number of men prominent in Association work. It came very near being railroaded into adoption. I was one of the very few who spoke in opposition to the resolution. The matter was tabled.

One speaker, who opposed the resolution, was received with groans and cat-calls because he stated that he had sold thousands of day old chicks and had never had one complaint. His statement can easily be true. I know several men who make a business of hatching and shipping day old chicks and I am in a position to know that these men have no difficulty in satisfying their customers and that complaints are exceedingly rare. When the day old chick business is properly conducted, as it should always be, there is less chance for dissatisfaction and complaint than in any other branch of the poultry business. Most breeders will admit that the sale of hatching eggs results in an almost endless round of complaints. Yet it would be folly to use that as an argument against the sale of eggs for hatching. Eggs for hatching must and should be sold and the same is true of day old chicks.

The resolution as presented is too lengthy for reproduction here at this

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

time. In substance it was to the effect that in adopting the resolution the Association would condemn the practice of selling day old chicks on the ground that it was cruelty to the chicks, spread disease like "white diarrhoea," resulted in loss of vigor and vitality and was otherwise undesirable. It pledged the Association to go before the United States Department of Agriculture and to endeavor to obtain its support to legislate the day old chick business out of existence. It further provided that the services of the Society for the Prevention of Cruelty to Animals be enlisted to prevent the sale and shipment of day old chicks on the ground of cruelty.

In support of this resolution several members claimed that many who had gone into the day old chick business were getting out of it because of complaints and because day old chicks could not be safely shipped and would almost invariably die after arrival if they did not die during shipment. They claimed that chicks were subjected to cruel treatment during shipment and that the method of shipping and losses of chicks because of ignorance of the purchasers, as well as because of vitality lost during transportation, also amounted to great cruelty to the chicks.

I consider this matter of considerable importance. A contention that for a long time has been smouldering under the surface is now beginning to shoot up flames where they can be seen, heard and felt. It is born of a fear on the part of a good many poultry breeders (not equipped or qualified to go into the sale of day old chicks) that the growth of the business of selling day old chicks will injure their own business of selling eggs for hatching and breeding stock. A good many breeders believe that the business depression of the past two seasons has been largely due to the exploitation and sale of day old chicks. As a matter of fact the falling off in business was due to more general causes and came because in the general trend of events it

was due and these things run chiefly in cycles. The wheel of time keeps right on turning and those who "keep plugging away," and avoid hysterical outbursts against matters which they cannot avoid or control, will eventually find that a season of prosperity will arrive in due course.

It is absurd to tirade against the sale of day old chicks. It is folly to bring up the question of dissemination of disease. It is rank nonsense and injustice to bring up charges of cruelty against the great majority of shippers of day old chicks, because a few do not use sufficient care in shipping, because in some cases there are losses from transportation abuses or because of ignorance on the part of the buyer.

The contention of cruelty can with just as much justice be brought against the seller of breeding stock and particularly eggs for hatching. If a buyer is ignorant of poultry work he may hatch weakling chicks from the eggs and his neglect of the chicks when hatched may amount to actual cruelty. Injuries received by the eggs during transportation may easily result in the hatching of weakling chicks that are not fit to live. There are a dozen chances for alleged cruelty and loss of vitality in selling eggs for hatching and in selling breeding stock, to one chance in the sale of day old chicks.

In the matter of dissemination of disease there are a thousand chances of spreading disease by sale of eggs and breeding stock to one chance in the sale of newly hatched chicks. Diseased breeding stock carry their diseases with them. It is not necessary to go into details. Eggs for hatching from diseased breeding stock are a fertile source of spreading diseases broadcast. The eggs which hatch may, probably will, produce diseased chicks. If such eggs are hatched in the nest or incubator with other eggs from sound stock, the disease in the majority of cases will be found to involve the entire flock, chicks from the sound and unsound

eggs alike being infected. A dozen eggs from a hen whose ovaries contain white diarrhoea infection, placed in an incubator with 300 eggs from sound healthy uninfected stock have been proved to have resulted in the infection and loss of the entire flock hatched. And, it Does Not Stop with the eggs that hatch. The Eggs Which Do Not Hatch Are a Source Of Infection. I know of a number of cases where epidemics of fatal poultry diseases have been started through feeding infertile, but infected, eggs from the incubators to both stock birds and chickens.

How many times have you bought eggs for hatching and received eggs that you would be ashamed to offer for sale for table purposes? Misshapen, thin shelled, cull eggs that should not be sold, frequently are found in high priced sittings. A lot of them don't hatch and a lot of others hatch weaklings. That is no argument against the sale of hatching eggs and it should not work an injury to the breeder who makes it his business to see that none but good sound eggs from healthy vigorous stock are sold from his plant.

I want to say to poultry breeders everywhere, and a good many have told or written me about their troubles and the "falling off in business," that the chief general cause of depression in the poultry business is Failure To Play The Game Fair and Square.

Gross misrepresentation and exaggeration in advertising, which may not be provable but which is only too apparent, is one cause. The tendency to treat customers on the "I've got your money, what can you do about it?" plan is another factor. Faking show specimens and illustrations is another factor. There are a lot of other factors that you all know and which I need not mention here. But, The Legitimate Business Of Selling Day Old Chicks Has Nothing To Do With Business Depression In the Poultry Business.

Good times are coming. I believe it. I know a lot of men in the poultry business, in various branches of it, that I am proud to number among my personal friends. They do business in a square and honorable way and they are successful. The way to win solid success in the poultry, or any other, business is to play the game with clean hands.—Be honest with yourself and with others.

I have never felt called upon to make excuses for devoting my life work to poultry investigations and writing on poultry subjects. I am not and never have been ashamed of being a "poultry editor" and "chicken crank." I came away from the Atlantic City Convention, tired but mighty glad that I went and pleased to have added to my acquaintance men and women associated with the industry who are worthy of the greatest respect and admiration. In all of the hot air agitation, common to all such meetings, the thing that "jarred" me most was the attempt to pass that resolution against the sale of day old chicks. I hope it will arouse world wide agitation and protest, for I believe the day old chick business has come again to stay.

It is one of the most important branches of poultry husbandry. The business of hatching and selling day old chicks is one of the oldest and most honorable callings in poultry husbandry. I say it has "come again" because, though comparatively new in our own country, it has been practiced for centuries and was begun hundreds of years before the birth of Christ. We might just as well face the facts. Ignorance and prejudice won't

help us any. The day old chick business is here to stay. It has staid longer than any other particular specialty in poultry husbandry.

I have sold day old chicks but I am not now financially interested in the sale of chicks, eggs for hatching or breeding stock, and I have no axe to grind. I have in the past few years bought a good many hundreds of day old chicks. It has proved a very satisfactory way to obtain chicks. Believe me: There is no cruelty in hatching chicks from good eggs out of healthy stock, by an experienced operator who knows how to properly hatch with hens and with incubators, and there is no loss in vitality. There is no cruelty and no loss of vitality in the proper shipment of such chicks for from a few hours to seventy-two hours journey, except in cases of extreme and extraordinary abuses by the transportation companies. There is rarely any trouble with the chicks after arrival at destination except such as arises from ignorance or inability on the part of the receiver to properly care for the chicks. The man who makes a fizzle with day old chicks which he purchases, or who is cruel to the chicks, would be just as liable to show up the same faults if he had purchased breeding stock or hatching eggs. The talk about cruelty and loss of vitality is silly.

I have several times raised 100 per cent of chicks bought at a distance and shipped in the ordinary way. I have never experienced any losses in day old chicks purchased, that were any greater than those experienced with home hatched flocks, except in two cases where I purchased chicks from a man who did not know how to hatch them. Last year I successfully reared to market size many flocks of chicks purchased day old from 12 to 48 hours express journey from my home and my losses did not exceed three per cent in these flocks and in some flocks one hundred per cent were reared. The actual work was done by inexperienced young men under my direction. I did not observe any cruelty. There was no lost vitality and there was no dissemination of disease.

I intend to keep right on buying day old chicks whenever I need them. I can buy equally as good chicks as I can hatch, if I should do the work myself, and I haven't the time to bother with incubation work when I can get an expert to do the work for me for a moderate price, (actually less than it costs me at home). I consider it entirely feasible and practical to buy eggs for hatching, or produce them, and then ship them to a well conducted hatchery to be incubated and have the chicks shipped home when hatched.

Everybody cannot be successful in the day old chick business. It is a business that calls for experience, knowledge and skill. It is exceedingly painstaking work and requires a great deal of the man or woman who undertakes it. It is entirely practical and it pays. Within a day's drive of my home are two very successful hatcheries and I have yet to learn of one well grounded complaint against either of them and these plants are doing a big business. One of them I visited in June and at that time there were cash orders ahead for everything to be hatched up to limit of capacity until the middle of August. Chickens, guineas, ducks, and other fowl were being hatched at this hatchery.

The day old chick business may need some regulation, later on, to prevent persons not qualified from engaging in it, but in my opinion it will regulate itself.

The man who tries to sell chicks from stock that is out of condition, who sells chicks of low vitality, or who does not know how to run incubators or incubating hens properly, will kill his own business.

When a man tells you that he has many complaints about day old chicks and is going out of the business because the chicks die during transportation, or die in the brooders after arrival, make up your mind that the cause of his failure is this: His breeding stock are diseased or out of condition, or he does not know how to hatch properly, or he does not know how to ship properly. In other words he has not learned his trade and he is failing or getting out because he does not know his business.

This last season I hatched 51 chicks in outdoor nests. Before they were dry, and without culling the weaklings, they were packed in an ordinary live chick box with burlap cover and shipped to a friend about 300 miles away. On arrival he found three weaklings and killed them. He raised 43 good chicks from this flock and says they are the "biggest, healthiest, strongest" chicks he has this season. I could go on and name hundreds of equally good examples from my own personal experience if I could give the time and space.

I hope the American Poultry Association will let that absurd resolution stay on the table and die there and that in the future no one will endeavor to pledge the A. P. A. to a sweeping condemnation of that honorable, practical, profitable and highly desirable branch of poultry husbandry the day old chick business in the hands of skilled and efficient men and women. And bear in mind that I don't forget for one single moment in the consideration of this matter, that the battle cry for success in poultry keeping is Health, Vigor and Vitality.

Prince T. Woods, M. D.

#### Chicago Wants the Next Meeting of American Poultry Association.

It seemed to be the almost unanimous opinion of the members attending the last annual meeting of the American Poultry Association at Atlantic City, that Chicago is entitled to have the next annual meeting. Chicago hereby—through the Chicago Poultry Society and the Chicago Association of Commerce—extends to the American Poultry Association a cordial invitation to hold its next annual convention in this city, and pledges to help to make it the largest and most enthusiastic convention ever held by the American Poultry Association.

There are many reasons why Chicago should have the next meeting of the American Poultry Association, and one of the principal reasons is that Chicago has never yet had the pleasure of entertaining the members of the American Poultry Association in annual convention assembled—although Chicago is the second largest city in America and the fourth largest city in the world. Another very convincing reason that the convention should be held here is that Chicago is the most centrally located large city in the United States, with 38 main railroads pouring over a thousand passenger trains daily into her railroad stations. No change of cars when you go to Chicago—all roads lead to the beautiful city by the lake—with her many miles of boulevards and 95 public parks, squares and playgrounds; 46 theaters and music halls; eight large

amusement parks; 37 public libraries and reading rooms; 68 large hotels capable of holding over 150,000 guests; 69 hospitals, 134 educational institutions, 98 benevolent institutions, 34 public monuments and statutes, 42 cemeteries and many other features too numerous to mention.

A few of the interesting facts about Chicago include the largest hog, cattle, lumber, stove, grain markets in the world; largest railroad center in the world; largest packing-house center in the world; largest grain elevator capacity; largest retail dry goods store, largest cold storage capacity, largest stock yards, and the largest and most complete water system in the world. Chicago is 26 miles long, 15 miles wide, with a total area of 190 square miles, being the largest city in area in America, with 22 miles of lake frontage, where more people go bathing daily than any other city in America, not excepting Atlantic City. The delightful, fresh, invigorating, life-giving breezes from Lake Michigan make Chicago an ideal summer resort where hundreds of thousands of out-of-town people spend their vacations every year, enjoying the thousands of interesting and educational attractions to be found within her city gates. No long spells of hot weather in Chicago in the good old summer time—old Lake Michigan won't allow you to go crazy with the heat in Chicago.

So, come to Chicago, boys, and see a real live, up-to-date, hustling, bustling, rushing, pushing city that is the real eighth wonder of the world. Just think of it, in 1834 you could hunt wild wolves in what is now the heart of the city of Chicago and in less than eighty years it has become the fourth largest city in the world and the second largest city in America.

Chicago extends to you a cordial invitation to come and partake of her hospitality, and see a city that is really worth seeing.

#### How About It?

A distinguished foreign visitor says of Americans that we are a nation of hysterical neurasthenics and lawbreakers. That we load our statute books with laws that cannot be enforced and

do it to the tune of hysterical speech-making in our assemblies.

How about it? Of course the first feeling is one of resentment against the criticism, but isn't there a lot of truth in it? Most of our associations, all of our cities, states and even the nation, are loaded down with a superabundance of rules, ordinances and statutes until one can scarcely breathe without breaking the law. Most of our laws and rules are honored in the breach rather than in the observance. A rule that is good today may not apply to advanced conditions as found a year hence, for with all the waste of nervous energy, and because of it, we progress rapidly in this country.

One of our legal friends said to us not long ago that "what this country really needs is to burn up the statute books and throw most of the lawyers overboard where they can't swim back again." While we were attending the Atlantic City convention the striving for rules, more rules and more legislation brought these things to mind. It is easy to make rules and laws and it is not so very difficult to get them passed. It is difficult to enforce them and many times they have become obsolete through change in conditions before they become effective.

As to hysteria, we see a good deal of it sometimes in conventions, but one should not make the mistake of diagnosing as hysteria well calculated oratorical effects made by men who calculate cold-bloodedly on the results of their speeches. The real hysterical condition is that manifested by the majority of the voters when they fall for a well planned speech and vote with it even against their own personal convictions before the talk swerved them. To be able to pump hot air effectively without saying too much is a very effective asset sometimes on the floor of a convention and often it is a cold-blooded commercial calculator who has the gift. Not always, but often.

Another form of hysteria or manifestation of neurasthenia is the constant seeking of excitement of our people in places of amusement, in summer resorts and similar places, where the pace is fast and money flows freely. It is a form of restlessness that reminds one of a suddenly disturbed ant colony. At

Atlantic City we could not help wondering where the crowds came from and where they got the money to spend and what they really got out of it all except overwrought nerves and greater boredom and unrest. To watch the over-dressed, much made-up crowds restlessly turning from one thing to another in search of new sensations, the hard faces of many and the bored looks of nearly all, we did not wonder at the foreign visitor's estimate of Americans. The same conditions exist pretty much all over our country. They are only exaggerated at Atlantic City, where people come for a few days or few weeks to spend more than they can afford, frequently money which it has taken months to save against this vacation time, and then they go back again to toil, more weary, more nerve wracked and less fit to work. Why can't we get sensible and take really restful holidays? How about it?

#### Reese V. Hicks Goes to the International Company.

In response to inquiries, I wish to announce that after September 1st I will do only editorial work for Poultry Culture and devote practically my entire time as representative in the middle west of the International Incubator & Hover Co. After years carefully studying incubators and hovers have decided that the International Sanitary line is the best on the market and has a great field of usefulness. Hence my connection with this company is after mature investigation and study.

Reese V. Hicks,  
Topeka, Kan.

John W. Ward, Jr., Pennington, N. J., the well-known Cornish breeder, is now in Europe getting together the largest importation of Cornish fowls ever brought in America. The demand for this fowl is rapidly increasing and to meet this demand Mr. Ward found it necessary to import a large number of birds, and to make sure that nothing but the best would be sent he decided to go to England and make his own selections. Mr. Ward is an enthusiastic Cornish breeder and we predict nothing but success for him.

Crusader III, a Boston Winner

## REGAL FACTS

Are you a breeder of White Wyandottes, or are you thinking of taking up this splendid variety? Let me present you a few facts for your consideration:

I—Regal White Wyandottes, being bred in a northern climate, have always been noted for size, vigor and a silvery white plumage.

II—Eggs hatch phenomenally well and the big plump chicks grow like weeds.

III—Regal White Wyandottes in the past twelve years have won more prizes than any other strain. New York State Fair, Boston, Toronto and Guelph, 364 regular prizes not counting specials.

IV—At Boston, the home of the White Wyandottes, the greatest winning ever made, was made by the Regals, winning best display with a score of seventy-two points.

V—As a heavy laying strain, they can hold their own. One pen of nine females averaged last season 199½ eggs per hen and I have individual records sworn to by customers running as high as 255 eggs per year.

VI—The Regals hold a unique position. They have all the utility qualities which recommend them to a market poultryman while on top of all this they can go into the largest shows in America and win over the exclusive exhibition strains.

To quote Judge Drevenstadt, the greatest living authority on the Wyandotte: "Your birds have been bred to the Wyandotte type most consistently ever since I first handled and judged them at Toronto many years ago." They are true Wyandottes in shape and have the color to go with it. All over America, my customers are winning the blue ribbons. Why not send me a trial order and become acquainted with America's finest White Wyandottes? Send four cents in stamps for the Regal White Wyandotte Book. Catalogue and sale list free.

**John S. Martin : Box 51 : Port Dover, Canada**

## Going Some.

Now and then when we read our own American Poultry Journal, hot from the presses, we get a surprising jolt. August number was no exception. We read the following on page 1139 in J. F. Shureman's "Current News of the Poultry World," copy for which did not pass through our hands but went direct to the printer:

"Theodosia Roosevelt, so named because of her evident antagonism toward race suicide, and said to have been the oldest hen in America, died on April 27 at the home of her owner, Mrs. Elizabeth Grinnell, of Pasadena, Cal. She was 25 years old. The aged hen laid approximately 7,500 eggs during her lifetime and mothered many a brood of chicks."

We don't know who is responsible for this remarkable statement, whether it is due to error of typewriter, proof-reader, or some joker, or where Mr. Shureman obtained his information, if it really came in the shape it was printed. In any event it sure is "going some."

We have heard a good many big tales of wondrous things that happened in California, but Mrs. Grinnell's hen has them all hidden in the shade. We've heard of California pumpkins so large that when hollowed out they were used for hotels and union stations, but this ancient hen is greater than any of the seven wonders of the world. It is too bad that Baron Munchausen can not be on hand to do her memory justice, though we must admit that the types have done pretty well as it is.

Now if our paragrapher had said that the hen was five years old when she died and that she had laid a total of seven hundred and fifty eggs in that time, her record of performance would have been sufficiently remarkable to be worthy of space. But 25 years old with a record of 7,500 eggs divides up into an average of 300 eggs a year from birth. Going some, is it not? She, apparently, began laying soon after she was hatched.

We doubt if any hen ever lived much beyond eleven years old. We have personal knowledge of one Buff Cochin hen that lived to be nine years old, but she was feeble and a non-producer toward the last. After the third laying season the egg yield usually drops off rapidly to a very slim yield.

What is the State of California thinking of that she does not erect a monument to this hen at the entrance to the Golden Gate, so that other Californian hens may be encouraged to strive for "Theodosia's" record? Or perhaps this ancient hen is not considered worthy of honor because she failed to produce 365 eggs a year and an extra egg on leap years. Who has the next egg record yarn? After this we will require a sworn statement before a notary, accompanied by the affidavits of reliable witnesses who saw the eggs laid. Next!

## DR. WOODS' NOTES AND COMMENT.

Massachusetts Agricultural College and Prof. J. C. Graham, as well as the Massachusetts State Poultry Association are to be congratulated on the success of the three day poultry convention held at Amherst the last of July. It was a most interesting, instructive and helpful meeting and the attendance was a record breaker. We are glad to know that this meeting will probably become an annual event.

\* \* \*

Pennsylvania is doing good work in boosting poultry interests. The last Leg-

islature passed a bill carrying a two years' appropriation to put in the field ten trained agricultural-experts as special instructors and demonstrators along agricultural lines. In extent and scope this work is expected to differ from any heretofore attempted in this or other states. It is essentially an extension and broadening out of institute work and is directly under the supervision of Deputy Secretary of Agriculture and Director of Farmers' Institutes, Hon. A. L. Martin, of Harrisburg. It is expected to carry the institute work direct to the farm and to show the breeder by practical demonstrations as well as by talks. W. Theo.

## YOUR OPPORTUNITY

To get classy Buff Orpingtons that weigh

Cockerels up to 7 pounds, Pullets to 6 pounds

birds with clear buff wings and even surface color. Many with "Ideal exhibition color" sure to win the blue. I raised a lot of early birds just to fill the demand for early show birds. Let me supply you. My prices are low, \$10 to \$25 for cockerels, \$7.50 to \$15 for pullets, and I guarantee to please you. Let me help you to win. I have just won (August 6, 1915), one pullet and cockerel at Greater New York Show in one of the hottest classes of Buff Orpingtons in the country. The largest breeders from the East and West were there. When writing mention American Poultry Journal.

Remember

Best Chick and Hen Food  
Only 10 Cents Per Bushel

Don't put it off any longer. Now you can get a Reliance Grain Sprouter for so little money that if you only have a few chicks, it will more than pay you to order one.

Thousands of these low-priced grain sprouters are in use on the most successful poultry farms in America, on country farms, in city suburbs. The Reliance is far superior to many others—it is highly efficient in operation—never-failing in results—requires less care and attention—sprouts all kinds of grains—equal in construction to those costing almost double the price.

Write us today and learn what a really low price we place upon the

Reliance  
Grain Sprouter

The few dollars spent on a Reliance will be the means of doubling your egg money, keeping your fowl healthy, making them plump, bringing higher market prices, besides saving two-thirds your feed bill.

Don't judge the Reliance by its low price—its construction proves it worth many dollars more than we ask.

The Reliance is built along lines that make it most efficient. Double walls, heavy insulation, galvanized iron lining, galvanized trays, etc. Best lumber used throughout, front contains more glass, which brings more sprouts. Also economical heating and best ventilating system.

Get literature on the Reliance—the low prices on the various sizes, the guarantee, etc. Write today without fail. You'll save and make money by doing so.

### THE WORLD'S BEST LAYERS

#### R. C. RHODE ISLAND REDS

Champion Pen at Missouri State Experiment Station, Record 1,042  
LADY HATTIE—256 Eggs

The record of this pen shows the remarkable laying qualities that have been incorporated into my R. C. Reds. Lady Hattie, with her record of 256 eggs, was second best layer of the entire contest. They are of the genuine Red type and are egg layers from start to finish. The infusion of some of this blood with your stock would bring gratifying results. An investigation will convince you I have the best R. C. Red layers, simply because I breed for eggs.

#### S. C. RHODE ISLAND REDS

LADY AGNES—237 Eggs

The breeders of this variety who are not getting the eggs should not feel discouraged. I am getting splendid results from my S. C. Reds, simply because my plans for my mating do not permit of inbreeding. This method of inbreeding for the sake of a few minor points is done at a sacrifice of vigor, strength and vitality. Do you expect eggs where these qualifications are dormant—dead. As a flock my S. C. Reds are the equal of my R. C. Reds. Customers are well pleased with my offerings of egg producers in this variety. I have some for you.

#### BARRED PLYMOUTH ROCKS

LADY VERA—235 Eggs—and Four of Her Sisters Laid 967 Eggs and  
Led On—Barred Rock Pens at Missouri State  
Experiment Station

This grand old breed, writes an eminent authority on poultry, will not stand the ravages of inbreeding very much longer. He cites cockerel matings, pullet matings, single matings and double matings are all that breeders discuss. They as a rule practically ignore a mating to produce more eggs. Naturally where eggs are not sought for the yield will decrease. These breeders, the authority continues, will do with the Barred Rocks the same as was done to the Light Brahmas. Years ago Light Brahmas were good layers. Very few think so today. My strain of Barred Rocks is one strain that is not going backwards in egg production. They are bred for eggs and show their laying qualities.

#### BUFF ORPINGTONS—Lady May, 219 Eggs

My Buff Orpingtons, while not quite as well perfected as my Whites, occupy the same enviable position among Buff Orpingtons as my Whites do among White Orpingtons. To you who fancy Buff Orpingtons, I wish to say that my strain is the only trapnested strain, bred year in and year out for egg production. I made such progress with this breed that I really expect my 1914 pens to be the equal of my Whites. If you desire good layers in Buff Orpingtons, you can have them if you make your requirements known to me.

#### FALL SALE OF STOCK

I can supply hens with records, also pullets, cocks and cockerels from hens with records of better than 200 eggs, including all of my champions. Trios and pens mated for best results is my specialty. Write for revised price list and catalogue. They are free.

JOHN G. POORMAN : MIDLOTHIAN FARMS & HATCHERY  
BOX 100, TINLEY PARK, ILLINOIS

Wittman, well known among poultrymen, has been appointed to the force of demonstrators as "poultryman" and any resident of Pennsylvania desiring advice or instruction in poultry matters may call upon him for free service. All applications for such service must be addressed to Director A. L. Martin Division of Farmers' Institutes, Harrisburg, Pa. Mr. Wittman has had wide experience in the various branches of poultry husbandry and as a lecturer and we have no doubt that his services will be in great demand by fanciers and utility men. We hope he will be kept so busy in this new field of work that he will soon have to have several assistants. Pennsylvania readers will please pass the news along.

\* \* \*

A. F. Rolf, a Massachusetts man, has been appointed associate professor of poultry husbandry at Oklahoma Agricultural and Mechanical College, Stillwater, Okla. Prof. Rolf served for some time as a poultry instructor at the Connecticut Agricultural College, Storrs, was later associated with the Hillside School in Massachusetts, was poultry instructor at the Mississippi Agricultural College and more recently at the Georgia Experiment Station. We wish Prof. Rolf all success in his work in Oklahoma.

\* \* \*

"Rule 17 Jr." has been adopted by the A. P. A. in convention assembled. It was a foregone conclusion that it would be. We didn't experience any "heart failure" to find the same man speaking in favor of this rule that fathered the original "Rule 17" that was killed in previous convention, although he said he expected some folks might be surprised. The rule does not become operative until after the next annual convention. It will undoubtedly come up for reconsideration in 1914 and will doubtless again give a grand opportunity for advertising magazines, artists and solicitor judges. Perhaps it may be killed, but since it is such a good advertising medium and such a famous outlet for hot air, why not make it perennial? "It pays to advertise."

\* \* \*

We had a mighty good time at the Atlantic City convention. It is true that we didn't see much of the city, but that doesn't matter. We didn't miss any of the sessions, morning, afternoon or evening, however, and we found them very entertaining. One of the pleasantest events of the meeting was making the acquaintance of the Hon. Frank E. Hering and in hearing the comments pro and con. At the close of the first day's meeting not less than a dozen members favored us with unfavorable comment concerning Mr. Hering and advanced the opinion that he had been brought to the convention to hammer Grant M. Curtis. Knowing the situation, it made us smile. As the meetings advanced the knocking members began to cover up their hammers and revise their opinions and in the closing hours of the convention a unanimous vote of thanks was moved and carried for Mr. Hering for the efficient and helpful work he had done for the association during the meetings. Human nature is always human nature and the position of the "stranger within the gates" is generally about the same.

\* \* \*

As a matter of fact, Mr. Hering's attendance at the convention was due to accident of circumstance and not to

any plan. He came over to the "Queen City by the Sea" for rest and relaxation, attended the opening meeting, became so much interested that he decided to stay for the rest of it, and stay he did, doing good work and hard work at every session until the final adjournment. The association needs him and more men like him. So far as our observation went his chief consideration appeared to be the welfare of the association and his stand was always on the side of the question which he believed to be right. He proved an eloquent and effective speaker, whose remarks carried conviction and won respect and consideration from members on both sides of the question. He didn't knock anybody and played the game fair and square. The only comment he made concerning Mr. Curtis, in our hearing, was that he "generally found him on the right side of the question as he understood it." We hope that when the convention adjourned the "anvil chorus" promptly retired to the end of the pier and dropped their hammers overboard. We hope that Mr. Hering will always take a lively interest in the American Poultry Association and that we meet him again at the 1914 convention and more good new members equally well qualified to talk from the floor of the assembly.

\* \* \*

We have heard a whole lot about the attractive women to be seen at Atlantic City on the boardwalk and on the beach. The place has been widely advertised in that respect, but we missed 'em. In spite of several trips up and down boardwalk and beach we didn't see "a peach." We did see some fearful and wonderful hats, gowns and a great variety of decorative effects in face paints. A lot of complexions looked as if laid on with the background brush of a landscape artist. Atlantic City owes something to the American Poultry Association, the best dressed, most natural and most attractive women to be found in Atlantic City convention week came there to attend the meeting. No appeals taken.

\* \* \*

A Maryland reader wants to know why it is that in the New York Zoological Gardens the sign on the enclosure containing Colored Muscovy reads: "Black Muscovy Goose, wrongly called Muscovy Duck." The sign reads that way because it is a fact and we have been wondering how long it will take our Standard tinkering committee to wake up to the fact. Properly the Muscovy is a goose. It has a period of incubation which proves it a goose and not a duck. Crossed with the Pekin duck the Muscovy produces sterile hybrids or "mules," which will not and can not breed. Still the Standard says that the Muscovy is a duck.

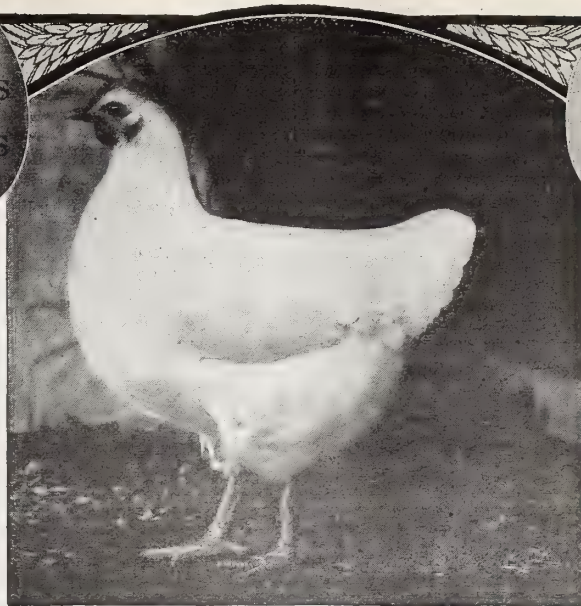

\* \* \*

We noted at the recent convention a good many references to hybrids when really crosses were meant. A cross-bred fowl is not necessarily a hybrid. A hybrid is properly the result of crossing different species, which results usually in sterile offspring. A cross or cross-bred is the result of crossing different breeds of the same species. Respectfully submitted to the committee for improvement and revision.

\* \* \*

While we have it in mind we have another comment on the Standard revi-

THE  
WORLD'S  
BEST  
LAYERS

TRAP-  
NESTED  
200 EGG  
STRAIN

## THE WORLD'S BEST LAYERS

### WHITE PLYMOUTH ROCKS

LADY SHOW YOU—The World's Champion Layer—281 Eggs  
at Missouri State Experiment Station

This, with many other records of over 200 eggs, is sufficient proof, who has the most profitable White Rocks. Regardless of claims there is not a White Rock breeder in the country who has bred for eggs in the manner that I have. Think of the advantages to be gained by starting with the strain that has produced the world's champion layer. Start with the best and breed as I breed and you will always have some of the best White Rocks in the world.

### WHITE WYANDOTTES

LADY ROSE—232—And Four Sisters—Was the Second Pen at Missouri State Experiment Station with a Total of 1,015 Eggs

When the facts are known this is the most remarkable record of consistent laying ever recorded. The official leg band numbers are 487, 488, 489, 490, 491 and 802. They laid respectively 215, 232, 292, 203, none and 163. No. 491 with no credit was sick three months and then died. No. 802 took her place and in the nine months laid 163. The consistent laying of the four brought up the total average of over 200 eggs per bird. Never were five birds picked as pullets sent to a contest wherein four birds laid over 200 eggs each. Those who are considering White Wyandottes should not fail to note the merits of our strain. They have been bred for egg production for nineteen years.

### WHITE ORPINGTONS

LADY GRACE—232—Champion of All Orpingtons at Mo. Exp. Station

In White Orpingtons I have the last word. With the advent of Orpingtons into this country it has been one continual struggle to produce the prize winner. I was one of the few who stayed at home and continued to breed Orpingtons along the lines that made them famous as England's greatest egg producers. I have avoided all inbreeding as a St. Paul customer will vouch for. Three years ago he invested \$600.00 in eggs and within three months had six chicks to show for the \$600. He purchased from me 600 chicks in 1911, 700 in 1912 and 400 in 1913. This determines that quality is not always a matter of price—the entire 1,700 chicks did not amount to \$600. No breeder can dispute the superior qualities of my White Orpingtons.

### WHITE LEGHORNS—Lady Beatrice, Record 240

My flock of White Leghorns, with Lady Beatrice leading, is the distinctive Winter laying kind of White Leghorns. Bred from year to year from the most promising layers has brought them to the same high state of perfection as is maintained in all of my breeds. The Leghorn is indeed a profitable layer if she can be induced to lay a share of her enormous output during the Winter months. My White Leghorns will do this. Egg farming with few Winter eggs is far from profitable. If you desire White Leghorns, breed my strain and be on the safe side.

### FALL SALE OF STOCK

I can supply hens with records, also pullets, cocks and cockerels from hens with records of better than 200 eggs, including all of my champions. Trios and pens mated for best results is my specialty. Write for revised price list and catalogue. They are free.

JOHN G. POORMAN : MIDLOTHIAN FARMS & HATCHERY  
BOX 100, TINLEY PARK, ILLINOIS

sion. The glossary definition of "rump" got by the second reading without comment, and we believe that it remains the "rear end of the back of the fowl, etc." "Rump" doesn't mean, when applied to poultry, what it does when applied to other animals. Your grandmother and mine called the rump of a fowl "the last piece over the fence" or "the pope's nose," and it was esteemed a table delicacy when roasted nice and brown. Now, maybe it is the "rear end of the back" and maybe it isn't. Suppose we had the old fashioned "rumpless" fowl to deal with, would it be the rear end of back

in that case? We may be disqualified, but we believe that the "rump" is that portion of the fowl's body which carries the main tail feathers, and which contains the oil gland and that it is absent in rumpless varieties.

\* \* \*

We don't see how a book like the Standard can be successfully and satisfactorily revised and edited from the floor of a convention. It ought to be prepared by revision committee, such as is now the case, then submitted to a competent copy editor, under the supervision of a good judge of poultry and carefully revised and edited before

presenting it to the convention. Members should have printed copies of the changes before them, at least so far as concerns the varieties in which they are competent to criticize, and then any unsatisfactory matters should be referred back to the committee for correction and improvement. The committee might hold hearings if it saw fit, but it seems to us that the present discussions from the floor of the annual convention on this subject use up a lot of valuable time that might be better employed and really do not make much progress with the revision work.

\* \* \*

The Atlantic City convention had the poorest press notices we have noted of any poultry convention of recent years. We ought to have a special publicity committee for such events, to see to it that the newspaper press gets good reports of the meeting. Put less "josh" and more dignity into the newspaper reports. Let's get some advertising in this way that will help for progress, greater interest and more members.

\* \* \*

We fully intended when new business came up to move that the association buy a suitable gavel for the use of the president. That ten-cent tack hammer is a bit "raw." Get a little more dignity and self-respect into the organization. Democratic spirit and good-fellowship is all right in its place, but remember that the public sizes up an organization a good bit by the manner in which it goes about its business as well as by what it does. It would be entirely in order for some member, skilled in wood turning, to

Frank H. Davey, Supt.

make the association a present of a gavel of attractive and appropriate design. Get busy. \* \* \*

In the Atlantic City papers we learned that on Wednesday the morning session of the convention adjourned early to permit everybody to attend the great clambake at Longport and that everybody went and had a great feed and most enjoyable time. That clambake didn't come off and we didn't see many members exhibiting a full-fed expression on Wednesday afternoon. The fact is that the morning session ran over beyond the noon hour, that the time between morning and afternoon sessions was taken up with committee meetings. We believe the officers must have been obliged to eat most of their meals on the run between hotels and the pier, and nobody had much time to think about any entertainment programme. The greater part of the lectures were canceled. \* \* \*

The summer poultry show on Young's Million Dollar Pier is a most attract-

ive one. The birds look unusually well for the season of the year. The manner of displaying them in large exhibition yards adds much to the interest of the show and must prove of great advertising value. It is a good show and we wish we had been able to give more time to it, but the meetings in the Greek Temple proved to be the greatest pulling attraction, with now and then a recess to enjoy the sea breezes and meet old friends and make new ones. \* \* \*

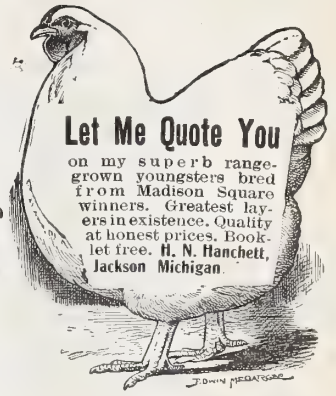

Editor Lemuel W. Standish of The Poultry Index has three breezy and amusing editorials in his August issue on the Curtis-Standish-DeGraff controversy that make interesting reading. For a man who has been "skinned alive" and had his hide nailed to the "Reliable barn door," he appears very chipper and he certainly looked happy and contented when we saw him on the other side of the convention hall at Atlantic City, though we missed him after adjournment. There is nothing like getting things out of one's system when

the spirit moves; it has a wholesome effect like that of a thunder storm on a humid August day. \* \* \*

Home again now, and it sure does look good to us.

Blue Orpingtons

# Win With Ferris Leghorns

Special prices this month on show birds of the finest type, having low, well spread tails, long backs, good heads with smooth five point combs and white earlobes, and ideal shape and color in every section. If you could examine our young stock you would be surprised at their high quality for it is very unusual to see so many exhibition birds of finest type as we now have to offer. We raised over 10,000 this year from our exhibition and trapnested laying pens and we still have early hatched pullets and cockerels in all grades that will be just what you need, because they are

capable of winning in any competition.

**10 Per Cent Discount on All Orders Shipped This Month**—Cockerels from our exhibition matings or our trapnested laying pens, \$2 up. Cock birds, \$6.30 up. Pullets and hens, \$2.25 up. Write us for description and prices, we will be glad to explain more fully than this "ad" allows.

**All stock is shipped on approval** and if not entirely satisfactory your money is at once refunded. We also insure all stock for thirty days and replace or exchange any that die or get out of condition.

## TRAPNESTED LAYERS

Ferris Improved White Leghorns are bred for eggs as well as for exhibition. We trapnest all stock and breed from only those hens that lay more than 175 eggs a year. For more than twelve years we have been breeding to produce heavy layers and if you will send for the catalogue mentioned below, you will find that our customers are securing more eggs all the year around than they ever before secured with any other breed or strain.

### Send for This 132-Page Catalogue Today

It contains so much valuable information that no breeder of Leghorns can afford to be without it. Not only does it fully describe Ferris Leghorns, giving prices and description of all grades of stock, but it also tells you how to feed for Winter eggs, how to line-breed your stock to improve laying and exhibition qualities, and gives more than one hundred valuable pointers that we have learned by more than twelve years' experience. If you are in need of stock now or any time in the future, just write your name on a postal—We will send the catalogue absolutely free.

## ONLYA FARM WHITE WYANDOTTES

Now is the time to make your arrangements for the fall and winter shows. We have a large flock of young stock, fast reaching maturity that will take some class to beat. We are not going to make our prices high on our show birds this season which will enable you to get something choice for showing and breeding. We have quite a number of show cocks and hens on hand which will enable us to supply you with anything from a single bird to an entire string. All birds sent on approval and can be returned at our expense.

**Chas. Staaff, Mgr. : Florham Park, N. J.**

## MISSOURI NATIONAL EGG-LAYING CONTEST.

**Five Hens Pass the 200-Egg Mark in Eight and One-Half Months—Two Hens Ahead of Lady Showyou's Record of Last Year—Is the Hottest Month Experienced in Many Years—The Extreme Heat Is Cutting the Egg Yield and Causing the Hens to Molt Earlier Than Usual—Some Interesting Results of the Contest and the Feeding Test.**

While five hens have passed the 200-egg mark in eight and a half months, and two of them have thus far surpassed the record of Lady Showyou for last year, the extreme heat for the entire month has been telling on the hens, causing them to molt earlier than usual and cutting the egg yield. The thermometer registered as high as 105 degrees in the contest houses at four o'clock in the afternoon of one day, a time of day when it usually begins to get cooler. In some other styles of houses it registered as high as 109 and 110 degrees. You can imagine how a hen must suffer when confined in a trap nest on a day like this, even if kept there only long enough to lay. We are surprised that they have done as well as they have. This continued extreme hot weather is unusual for this section. Hens suffer as much from hot weather in summer as from cold weather in winter.

The total number of eggs laid for the eight and one-half months amounts to 80,073 eggs. This makes an average of 118 eggs for each hen, good, bad, and indifferent. The yield for the month was 9,687 eggs. The average for each breed up to date is as follows:

	Eggs Each.
30 Langshan Hens, average.....	132
30 Minorca Hens, average.....	124
30 Ancona Hens, average.....	122
120 Leghorn Hens, average.....	119
120 Wyandotte Hens, average.....	117
60 R. I. Red Hens, average.....	111
90 Orpington Hens, average.....	110
120 Plymouth Rock Hens, average....	106

The silver cup for the best record for July was won by Mrs. Daisy Rose, of Bois D'Arc, Mo., on her pen of Anconas with 219 eggs. The R. C. White Leghorns, Pen 10, were only one egg behind them. The remarkable thing about the records for the last few months is the manner in which a pen of Black Minorca hens is laying. Half or more of the hens are about three years old, and they have gradually crawled up to fourth place. Buff Wyandottes also went to third place this month. One pen of Buff Wyandottes from Missouri is the third pen in the contest, another pen of Buff Wyandottes from Vermont contains the leading pen, and the third pen of Buff Wyandottes from Missouri contains the third highest individual in the contest. Only seven hens laid in the English pen of S. C. White Leghorns and one died, but still they made a small gain over the other pens.

The ten highest pen records for eight and a half months are as follows:

Pen No.	Eggs.
2 S. C. White Leghorns, England.....	1686
19 Silver Wyandottes, Iowa.....	1418
26 Buff Wyandottes, Missouri.....	1387
11 Black Minorcas, Iowa.....	1386
1 Anconas, Missouri.....	1385
20 White Wyandottes, Arkansas.....	1376
57 Black Langshans, Missouri.....	1369
30 Buff Wyandottes, Vermont.....	1368
9 S. C. Brown Leghorns, Missouri.....	1351
49 Black Langshans, Missouri.....	1319

The ten highest pens for July were as follows:

No.	Eggs.
1 Anconas, Missouri	210
10 R. C. White Leghorns, Missouri	209
17 Black Minorcas, New York	203
11 Black Minorcas, Iowa	196
26 Buff Wyandottes, Missouri	195
5 Black Minorcas, Missouri	182
18 S. C. Buff Leghorns, Missouri	176
9 S. C. Brown Leghorns, Missouri	171
8 S. C. White Leghorns, California	170
2 S. C. White Leghorns, England	157

The ten leading hens to August first are as follows:

Hen No.	Eggs.
860 Buff Wyandotte, Vermont	216
66 S. C. White Leghorn, England	206
600 Buff Wyandotte, Missouri	205
62 S. C. White Leghorn, England	204
61 S. C. White Leghorn, England	201
67 S. C. White Leghorn, England	190
735 Black Langshan, Missouri	190
77 Ancona, Missouri	189
72 Ancona, Missouri	188
55 R. C. White Leghorn, Missouri	188

# Whiting's ROUPENE

## Actually Does Cure Roup

Even the worst cases, even Diphtheritic Roup and Canker. We don't care how bad the case is so long as the bird is not in the last gaps of death.

**ROUPENE will cure** and leave no weakening or bad after effects in the bird or its progeny.

Just try it once. Pick out a bad case, one on which you have tried other so called remedies, and **we guarantee a cure or refund money.**

Whiting's ROUPENE is a genuine disease germ destroyer. It takes right hold and cures without fuss or delay.

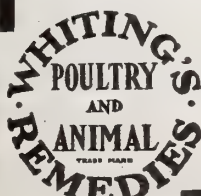

## ROUPENE Prevents Contagion. You Do Not Have To Quarantine the Diseased Birds.

ROUPENE not only cures Roup, Canker and Diphtheritic Roup, but it also cures Sorehead, Limberneck, Colds and Pip—all diseases of the breathing organs. 50 cents and \$1.00 per bottle.

All dealers, or mailed by us on receipt of price. Send for free printed matter.

## O. K. COMPANY

Dept. 29, 157 Water St., New York City, N. Y.

YAMA-NO-UCHI

—Meaning "Home in the Mountains" in these Chinese ideographs—is the name bestowed on an American-Japanese estate by a well-known Japanese statesman. To this "Home in the Mountains" we have added over a thousand acres Yama Farms—where we are specializing in farm products of exceptional quality.

### February and March Hatchings YAMA FARMS S. C. BLACK MINORCAS

**T**WO judges of Minorcas—conceded to be in the first flight of experts—visited Yama Farms last March. And in their opinion our mating of S. C. Black Minorcas, "as listed," were the finest they had ever seen.

Every breeder is particularly interested in the results of these matings—chicks of February and March hatchings that are now fully matured—excelling in all-round qualities even their famous ancestors.

We are offering a number of selected cocks and hens in new feather—magnificent birds that will shine in the keenest competition.

### WINNING STRAINS YAMA FARMS BARRED PLYMOUTH ROCKS

**Y**AMA FARMS Barred Plymouth Rocks always have been consistent winners for our many customers, as well as ourselves—wherever shown. They have been particularly distinguished for superior shape and excellence in color. We are able to offer a limited number of both old and young Barred Rocks that are unusually fine specimens of the variety, being superior even to our best offerings in the past—at unusually attractive and reasonable prices.

We invite correspondence as to full particulars of Yama Farms offerings and prices. Your money cheerfully refunded if you are not fully satisfied. Eggs and poultry served in Yama Farms Inn are supplied by Yama Farms.

September—the open season for shows.

\* \* \*

The A. P. A. has held its 38th annual meeting and it was a rouser. More power to the old association.

\* \* \*

The ocean got on the minds of many and they could not keep away from it, but the chickens all held to the life-lines, while a few old ducks wandered out to the deep spots.

\* \* \*

Our notes will tell you all about the men we met there and some of their doings; it was a fine, large and well-behaved crowd. President E. B. Thompson's smile and Charlie Welles's instructive swimming lessons were the features.

\* \* \*

The New York branch A. P. A. officers recently elected are President, Robert H. Essex; vice-president, B. W. Mosher; secretary, L. D. Howell, Mineola, N. Y.; executive board members for three years, D. M. Green, H. P. Schwab and C. H. Proper; for two years, Newton Cosh, George E. Underhill and I. F. Rice; for one year, Mrs. M. E. Monroe,

L. H. Bown and W. R. Curtis. This was the first mail election, and has proven a success, although some seem to think it a joke. It at least gives all an opportunity to vote if they wish, and our only regret is that more do not take advantage of this their opportunity.

\* \* \*

We have information that E. F. McAvoy, the Houdan man against whom we have heard many charges, has been arrested and is now out on \$5,000 bail, held for trial at Syracuse, N. Y., having been indicted on charge of using the mails in furtherance of a scheme to defraud. If any of our readers have been defrauded by this party will forward their papers and evidence to Mr. E. F. Boyson, Rome, N. Y., they will be placed in the hands of the prosecutor.

\* \* \*

The Poultry Association at Washington, D. C., is promising a hummer to the breeders December 23d to 27th. This national show should prove a big success and here's hoping the breeders will make it so.

\* \* \*

Buff Rock John W. Poley writes that he is back at his old stand at Royers-

ford, Pa., again and that the Buffs are richer than ever and larger in size and numbers. He is making special prices on breeders and early show birds.

\* \* \*

"Licene," to kill and prevent lice, has given us the best of satisfaction, and we gladly recommend its use; it is simple and thorough. The Licene Co., Pontiac Building, Chicago, Ill., will furnish information.

\* \* \*

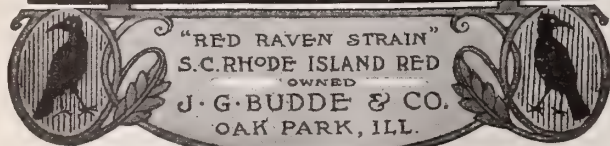

The national egg laying contest in charge of T. E. Quisenberry, has interested us for some time with the results most gratifying in this work as well as in general poultry lines and in A. P. A. matters as well, Mr. Quisenberry has proven himself efficient and capable.

\* \* \*

If, as reported, there were 1,700,000,000 dozens or 20,400,000,000 eggs laid in this country in 1912, and they were laid end to end, they would form a line encircling the entire earth nearly five times. Some eggs.

\* \* \*

The report of the meeting of the A. P. A. revision committee at Indianapolis is a clean-cut statement that shows that

# S. C. RHODE ISLAND REDS

**GRAND CHAMPION WINNERS

Exhibition and breeding birds from our Champion winners at low prices.

**Cocks, Cockerels, Hens and Pullets  
at prices that will interest you**

Now is the time to place your order for birds for the early Fall and Winter shows. We have them that will win.

Our book on Reds tells you **How to Mate and Exhibit Reds.** Sent on application.

**J. G. Budde & Co., Oak Park, Ill.**

efforts along sane lines are being made to revise the Standard. The question of illustrations should receive special care and but the one form be used for each breed if all varieties are again to be shown.

\* \* \*

Further, the A. P. A. should allow the specialty clubs, under proper conditions, the use of the adopted illustrations to show proper shape. This would eliminate much of the difference of opinion of correct form.

\* \* \*

The Barred Rock Club revision committee met in New York August 7th and agreed on a future Standard for the variety, but three changes in the text were made referring to color and barring and but one in affecting shape. The meeting was a large one, attended by E. B. Thompson, Victor Bradley, C. H. Welles, H. D. Riley, L. H. Reade, Haldie Nicholson, A. C. Smith, Val Thompson, J. D. Harcombe, C. H. Latham and H. P. Schwab.

\* \* \*

The A. P. A. revision committee accepted all suggestions made, which was pleasing to note, and we extend to them and the general meeting for the hearing extended and their prompt action. Personally, we feel proper action was taken and that further improvement along sound and safe lines are assured.

\* \* \*

The A. P. A. committees worked long and faithfully and completed their work with dispatch. Much credit is due them. Their efforts for better poultry and harmony in particular prevailed.

\* \* \*

With misunderstanding on the part of the voters rule 17 was declared to have passed the convention. We wonder who is troubled and who was handed the "gold brick." Time will tell.

\* \* \*

Hot air and positive ignorance of this and other questions were the basis of the "boy orator's" debut in this poultry convention, but he will ripen with age and experience (probably?).

\* \* \*

Mr. Grant M. Curtis as usual was heard and to advantage when on two occasions he was forced to show his hand. He did so gallantly, each time having a royal flush, and won the pot easily. More than ever we admire this man. He stands for something with his great experience and principle.

\* \* \*

In our next we will mention the exhibit of poultry seen here and give further sidelights of the convention.

\* \* \*

The meeting was the largest ever held by the association with over 500 members present, and ideal weather. The famous board walk, wheel chairs, bathing and sideshows were fully enjoyed, and at all times the convention was well attended.

\* \* \*

President Hicks in his retiring speech endeared himself to every member and regrets were heard on all sides. His service and work for the association were great and of untold value, and every poultry keeper the country over has been benefited by his work. We hope he may ever be prominently connected with the councils of the association, for we need him.

\* \* \*

The committee in charge of the convention and the N. J. branch officers and

members did all and more than they promised to do. Wolsieffer, Cleveland, Punderford, Lewis and others were ever on the wake and had perfect arrangements.

\* \* \*

It was indeed a royal welcome given

to President E. B. Thompson on assuming the chair. He entered office with the best wishes of all and their promises of hearty support. With Thompson and universal harmony we enter a new year with every hope for the great industry represented.

## RED SUSSEX IN AMERICA.

By A. A. Carver.

THERE IS NO question now but that the Sussex fowl is to come into prominence in America, and unless all signs fail is about to experience a greater and more lasting boom than the Campines.

The Red Sussex are proving to be the most popular of all the Sussex, combining so well the fancy and utility fowl that their popularity is now sweeping English fanciers off their feet and the demand for good ideal colored birds in this variety is enormous.

The Sussex breed of chickens originated in the county of Sussex, Eng-

ly, and the classes are more uniform in shape and size, while the breed has lost none of its beauty, nor yet the essentials in a Sussex fowl—a long breast bone.

"At the Crystal Palace Show, London, Eng., the Sussex made a grand showing and full classification, with the Red Sussex predominating."

Furthermore with regard to the Sussex, Mr. Watson states that he traveled up and down the country from one show to another last season, and found the Sussex was growing more popular and it would only require a few years to see the Sussex breed the premier one in England, the Rhode Island Reds included.

Mr. E. W. Bunney, the noted English poultryman, has this to say of the

tile that come from the same county in England.

The standard weight (English Standard) for cock, 9 lbs. and up; hen, 7 lbs. and up, but I think when the breed is admitted to our Standard the weight should be lowered to 8½ and 6½ respectively, as the English seem to have a way of growing larger bone than we do in this country.

There are now well represented Sussex Clubs in England, Ireland, Scotland, Germany and America. The English Sussex Year Book comprises nearly a hundred pages, with a long list of members. In Australia the Sussex are making great headway and the boom is now on in that country.

Mr. Frank L. Platt, associate editor Reliable Poultry Journal, and one of

CARVER'S TOWN, THE HOME OF CARVER'S FAMOUS REDS, SEVILLE, OHIO

land, noted as the greatest poultry center in the world. As bred in Sussex, there are four varieties, the Red, Speckled, Light and Brown. At the Sussex County Show last year Mr. Clem Watson, English poultry judge, says this for the Sussex: "All who are interested in this breed must admit that the Sussex fowl has come to the front in no uncertain manner, and while the exhibition points have been strengthened the utility features of the fowl have not been forgotten, with the result that we have today a handsome fowl for the show bench, and a grand bird for table purposes. It is very gratifying to find the Red Sussex making such headway, and bid fair to eclipse the others in point of popularity."

"The color has improved wonderful-

Sussex through the Year Book: "The Sussex is without a doubt the finest table bird that could possibly be reared. It is also one of the very best layers." Mr. Bunney has kept nearly every breed that could be kept. He had tested the Sussex with them, and he was bound to confess that there was no bird that could compete with the Sussex as a winter layer. There was so much said about the Orpingtons and other breeds, but he had found no bird to touch the Sussex for laying and quick growing.

The Red Sussex is a very large bird, very showy and beautiful, with a type all its own, and distinguished in every way from Rhode Island Reds, its color being even more beautiful, of the same shade as the beautiful Red Sussex cat-

America's foremost poultry journalists, says: "The breeder who takes up the Sussex fowl is buying on a rising market."

The writer recently imported from England the finest Red Sussex obtainable, and now has a fine flock of youngsters coming on showing the rich dark color. Our Red Farm No. 2 will be devoted exclusively to Red Sussex under the management of M. M. Gensemer, an authority on the breed and member of the Sussex Club of England. We were very fortunate in securing Mr. Gensemer for our Red Sussex farm, since he has made a very extensive study of the breed, and is a fancier of high ideals. The Red Sussex farm is in good hands, and with the beginning of the egg season we

THE "CHASE"

## 'Course You Are Going to Show

Then you want winners. You want the White and Stay-White kind. The kind of  
**WHITE WYANDOTTES**

Duston has. The kind you can win with and breed winners from. Note this copy of telegram rec'd from a customer who has been breeding and buying from me for four years: "Texas. You won 1st and 2d cock, 1st, 2d and 3d hen, 1st and 2d cockerel, 1st, 2d, 3d and 4th pullet, 1st and 2d pen, 3d best solid colored pen." My stock is all naturally white and I'll not knowingly send you a bird at any price that is not a White and Stay-White bird. I sold a cockerel for \$25.00 to a breeder in Indiana who won with him. I have sold him for years. This bird as a cock was sold to a prominent judge and breeder of White Wyandottes for \$100. He wanted this bird show. Only stock with breeding and correct color turn out this way. I could fill pages with unsolicited testimonials, but the above substantiates claims that I have the stock and naturally white, and should tell you where to go for your show birds, you just cannot afford to overlook writing me for quotations—The original White Wyandotte man.

Arthur G. Duston, Box 1020, So. Framingham, Massachusetts

shall be able to furnish eggs from matings the equal of anything in England.

The Red Sussex farm is located at Creston, O., two miles from our Red Farm No. 1.

Our Red Farm No. 1 at Seville, O., will always be devoted to our great strain of Rhode Island Reds, and I can say that our Reds this season are the finest in color we have ever produced at Carver's Red Farm. Last year we had without question far and away the best Reds we ever bred, and we can see in this season's matings that the average quality is far better—I might say doubly better. We had a better grade of birds to select from in mating up our Rhode Island Reds, besides holding back the very best from last season, so that our youngsters now coming on are par excellence; especially in color. We have shown through our customers who have won in 25 states the past season that there is no better flock of Rhode Island Reds in America. A. A. Carver.

### COLUMBIAN PLYMOUTH ROCKS AS ROASTERS.

By F. M. Clemans, Mechanicsburg, Ohio.

THE PRODUCERS of soft roasters for the eastern markets have long known the great value of the Plymouth Rock-Light Brahma cross. This cross seems to produce just the dressed carcass called for by the most discriminating buyers of roasters. The best buyers want a creamy yellow skin covering delicious white fat, not a pronounced yellow skin covering yellow fat, as many suppose. Then the buyers at American markets like yellow shanks and feet. Now the fowl that will produce weight and attractive carcass in the shortest time and at the least cost is the fowl the market producer of dressed roasters must select if he expects success. There is no doubting the fact that the Plymouth Rock is the best pure breed for this purpose. Mr. Hyslop of Ohio, who has had eight years' experience sending roasters to the New York market, says:

"As a matter of business I have had to decide in favor of the Rock, for I buy and fatten all kinds (except Leghorns and the light breeds) and I find that about all the writers on the subject of soft roasters, whose writings I have read, are of the same opinion. First in its favor is its large size, often dressing 8 to 9 pounds at 9 to 10 months old. I had one that dressed 9¼ pounds. Second is its creamy yellow color and third the ease and rapidity with which it puts on weight."

Of all the Plymouth Rock varieties the Columbian Rock possesses the blood lines that make it the ideal roaster. At the time I made my original crosses this fact influenced me very much, and I have watched with interest the development of the breed in a practical way,

feeling that it must settle the problem of a breed par excellence for the maker of roasters for the best markets. The original blood embraced crosses of Barred and White Rocks with Light Brahmas. No better blood could have been selected to produce roasters of the ideal type.

In its present type (I speak of the real, big-boned, husky type of Columbian Rocks, not the spurious Wyandotte "sport" type), it is just what a practical roaster man would ask for in describing his ideal breed for this purpose. First of all, he wants quick growth and a good big frame on which to hang the fat he expects to market at 25 cents per pound. I recently brought in from the farm twenty average Columbian Rock cockerels, all

fowl to fill the bill. The ideal roaster must be a hearty fellow, taking his food joyfully and putting it to the best of use. I will further quote Mr. Hyslop on this point:

"But how about that 9¼-lb. Rock? Right here, put this in your hat: You can not grow them too large for the market. We always have enough medium-sized and small ones to suit all families, if not all pocket-books.

"At feeding time this Rock, like all of his brothers, has his head out of the coop as soon as he sees the food coming, grabs it off of your shovel before you can put it into the trough and proceeds to fill his crop. The other kinds are trying to figure out what all the excitement is about. Then they eat the leftovers while he sits down

RED SUSSEX AT HOME, COUNTY SUSSEX, ENGLAND

around seven months of age, which weighed 184 lbs., and were still well able to add largely to that weight. They would have made grand roasters, but were reserved for a better fate. The fact is that Columbian Rocks have never yet been produced in enough quantity to impress their great worth upon the market poultryman. It is only a question of turning out the numbers that the breed may become common enough to get more largely into dressed poultry channels, when it must be given pre-eminence in that particular. In addition to the size, beauty of dressed carcass and correct color of skin and fat, it has a plumage that dresses out beautifully, being free from the obnoxious dark pin feathers that are often a nuisance in dressing darker breeds. Then when it comes to quick growth and early maturity it, like all the Plymouth Rock race, is just the

and digests the first choice. Of course he puts on fat and puts it on fast, and it is white fat too.

"Now let us follow him to market. A customer comes in and is attracted by his tremendous size. She thinks it is a turkey at first, but the bright yellow feet and beak assure her that it is a chicken. She has noticed the white fat and is sure it is tender, and then, with her finger, she touches its soft velvety skin and knows it is a healthy carcass, and without any further question in her mind, decides."

The man who is in the practical line of producing dressed poultry need not resort to crossing to produce roasters that will meet the views of discriminating buyers. He can take the Columbian Plymouth Rock and have a pure breed meeting every requirement of the case.

### Unity POULTRY FEEDER OATS SPROUTER

No better feeder ever made. Feeds dry mash, grain, grit, anything. Special device prevents waste from billing or "side-sweeping." Litter and rat proof. Can't clog. Can be easily changed to a sectional feeder. Price \$1 by parcel post. Pays for itself times without number.

Unity Oats and Grain Sprouter specially constructed to induce extra rapid growth. Provides perpetual green chick feed. No lamp, no smoke, perfectly safe. Try parcel post \$4.50. Feeder and sprouter together by parcel post \$6. Guaranteed. Order now, or send for folders. Agents wanted.

Unity Manufacturing Co., 711-51st St., Milwaukee, Wis. Write for circular descriptive of Burglar System.

## There Is More Parks' Strain Bred-to-Lay Barred Rock.. Males

Used for improving the laying qualities of the flocks of this breed the world over more than all other strains combined. BECAUSE they make good, and are the oldest and greatest laying strain of today. Having been bred for eggs continuously since 1889, and a male whose dams, grand dams and great grand dams for generations on both sides has had individual records of better than 200 eggs in a year will undoubtedly stamp an improvement in the offspring of that flock of yours. We are the past few years supplying male birds for just this purpose to a surprisingly large number of the leading exhibition breeders of today. Our recent winnings show that in addition to heavy layers we have kept close enough to the standard to win in ordinary competition. If you aren't breeding the Barred Rocks your future is unsettled for they are the breeds that outlive the boom breeds. It's pretty much as Mr. W. R. Hayne, of Timire, New Zealand, puts it to us in his letter and, order received August 14th: "It's quite a relief to buy of a breeder instead of a boomer, and from a breeder whose argument is backed by years of success." COCKEREL CIRCULAR FREE—Specially mated pens for foundation stock. Large 36-page catalogue free.

# Notes from the Southwest

Conducted by H. H. Stoddard, Riviera, Texas

## PRIORITY POINTS IN THE INTEREST OF HISTORY.

**C**LAIMING AS I DO that from shell to block, the rule, green stuff, and foods of extreme or opposite characters (proteinous and carbonaceous) always before the fowls, each sort unmixed with others, will win out in a series of well ordered trials at stations and will be confirmed in private practice all over the globe; the origin of the rule should be mentioned now, before more water flows under the bridge and disputes regarding priority arise. The first declaration of record concerning the principle was made by Dr. Prince T. Woods in an article, "Fowls and Food," published in 1903, and later in his book, "How to Raise Chicks" (1912).

I am sorry that the doctor did not elaborate the idea and devote several pages to treating it exhaustively. But anyhow, A. P. J. has advocated it since with a thoroughness partially proportioned to its importance, and Prof. Quisenberry of the Missouri Agricultural staff is now pioneering in station work exploiting it. When, a century or several centuries hence, the historian of poultry culture in America seeks the author and the date of the original printed advocacy of giving all the unmixed and diverse foods that fowls will eat, he will not be at a loss for the information.

While on this matter of facts and dates of poultry history, in view of the borrowing, without credit, on the part of more than one poultry editor, and posing as originator of the convergent yard idea, the date of the invention in its first form will now be stated.

In July, 1873, the editor of a poultry paper was greatly in favor of having small breeding yards merely knee high, or thereabouts, and covered over, the tops to be hinged and these yards to be side by side, to save material. Naturally the idea arose to have the occupants report to one building for shelter, and ye editor scribbled for R. T. Sperry, then the only poultry artist in this country, a rough sketch, with intent to merely have for variety's sake a building a little different from any previously published; and, since the building was somewhat costly, it was desirable to have it answer for as much as possible of the ground nearby, hence the spreading of the yards fan shape. Following is an editorial, verbatim, describing the wood cut, both appearing in *The Poultry World*, August, 1873, page 103:

### "Fowl-house for Many Breeds."

"It is ground room that counts in yards, and not height of the fences. So long as there is room for fowls to stand upright, and for a tall rooster to flap his wings and crow with neck stretched to its utmost extent, a yard with fence

three feet high is as commodious as one with fifteen (see illustration).

"This is what may be called the 'radiation' plan, the outside runs being fan-shaped, or widest at the part farthest from the building, to admit of their being grouped around it for a common centre. In order to economize room, there are runs on the north as well as the south sides, and, though all will not answer well for use at all seasons, still the keeper can, by selecting according to circumstances, have some sunny runs for spring and fall, and others cool and shady for summer. Partitions between adjoining runs must be boarded, of course, to prevent neighboring cocks from fighting, and wire for the tops will be found about as cheap as lath, and it will obstruct the sun much less. It is indispensable that a number of openings be made in the partitions between the runs, for circulation of air in sultry weather, as otherwise such yards as these would be at times insufferably close and stifling. These openings should be protected by wire netting of about one-inch mesh. To admit of cleaning the yards, and supplying fresh soil, the wire tops of the yards should be made movable. Wire can be procured in the coil, and stretched across, instead of the more costly wire netting, as the openings may be very coarse, without danger of the fowls escaping."

Later a correspondent (*Poultry*

Ringlet—First Prize Cockerel and Champion Male at Madison Square Garden, N. Y., 1910-11 and Grand Sire of My Champion First Prize Cockerel of 1913.

## E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

**EARLY WINNING SHOW BIRDS**  
HATCHED IN JANUARY, FEBRUARY AND MARCH OF THIS YEAR

I now offer the finest early hatched exhibition Barred Plymouth Rock cockerels and pullets that I have ever produced. They show elegant size and shape, fine heads and deep narrow sharp clean cut "Ringlet" barring—they are my richest New York first prize blood of 1913.

### These Birds Are Ready to Win at the Fairs and Early Shows

The demand for early show birds will be enormous this year and I strongly urge you to place your order as soon as you can. I will hold birds ordered and ship when wanted—the prices will be very reasonable.

**I Offer Early Hatched Breeders Also. See My Ad of Bargain Sale of Yearling Birds on Page 1212.**

Richly illustrated 70-page catalog mailed upon request, it is full of illustrations of New York winners from life.

SEE MY OTHER  
ADVERTISEMENTS

Address,

*E. B. Thompson*

Lock Box 510, Amenia, New York

World, January, 1877, page 8) wrote asking for method of arranging yards for eight flocks, and by way of reply editor of Poultry World had ground plan and elevation made, and replied editorially, question and answer being as follows:

"H. H. Stoddard, Sir: I wish to know whether I can divide two acres of land into equal parts, and keep fifty fowls in each part? If that number is greater than is practicable, what would be the greatest number that in your judgment could be kept in that space? Also, could I keep them all under one roof, the building being in the center, or would it be better to build four separate houses, each house answering for two runs?" S. C. Pratt.

"Buffalo, N. Y."  
 "(Reply)—Our correspondent is referred to the accompanying ground plan of an octagonal poultry house for an answer. A quarter of an acre of ground will do very well for fifty fowls,

number. It is figured out, you know how. Two parents, four grandparents, eight great-grandparents, and so on. In humans, by the time you get back a dozen generations, which means only four hundred years, the crowd of your forefathers, every mother's son with your blood in his veins, would make quite an army, and in some thousands of years the requisite number of your grandads would equal more men than all England ever did or ever will hold at one time. The human race has most assuredly been on earth a long while; and go farther back, your ancestry would fill all Europe and all the old world. Still farther back and every rod of dry land on this globe packed with human beings, standing shoulder to shoulder, would not hold those of your ancestors living at any given day. This is what the ratio of "two parents, four grandparents and eight great-grandparents," with which we set out, leads to. Figures don't lie and yet we

ized there, and it was commented upon that the residents all had a family resemblance, just as Jews have, and for the same reason.

Now to go back to the Alfred the Great proposition. During the centuries since the reign of the good king,

Fowl house of many breeds. Reproduction of wood cut of 1873. First illustration of convergent yard idea. See Notes from the Southwest in this issue.

though a flock of thirty to each one-eighth of an acre would be better."

Yards on the radiant, or divergent and convergent plan, have been built since the seventies, but not to any extent simply because the idea of labor saving in poultry operations was not ripe for more than forty years.

Between 1873 and 1877 there were two or three illustrations and descriptions of convergent yards published, one in England by Wright included, but the original was the 1873 case as above related.

\* \* \*

A correspondent asks how I make out (August issue) that every Englishman is descended from the family of Alfred the Great.

This way: Every living thing has an immense number of ancestors. Even so slow breeding an animal as the elephant, considering his enormous prehistoric period, has very great grandfathers as the sands of the shore for

have run into an impossibility (?).

My readers who have worked in this field have found the solution, which is, that many times an ancestor served a double purpose. Your great, great-grandfather on your mother's side may have been at the same time your great, great-grandfather on your father's side, without any intermarrying having been done close enough to be objectionable. Really the fact that this ancestor was doubly your great, great-grandfather would not probably ever have been known unless by some prying amateur genealogist. In hundreds of combinations people receive from families of their own country the same blood strains over and over again, even though none but very distant relations intermarry. Two hundred years ago, when there was little roving about, the inhabitants of a particularly desirable valley, or other limited fertile district, partook of each other's blood so much that a sort of subrace became local-

Make the most of every trip with rod and gun.

**EASTMAN KODAK CO.,**  
 418 State St., ROCHESTER, N. Y.

the necessity just mentioned of intermarrying near home in order to have ancestors enough to go round, combined with the certainty (mentioned in August issue) that a marriage of parties widely distant from each other brings to the lineage a relationship of all the families of both parties—these two practices, outcrossing and mild breeding in line, combine to secure ancestors enough.

The chump reader, who is always around, will ask what the heredity of the English people has to do with poultry. Well, I am glad a correspondent started my pen along this line, for I find so many times, in farm papers and speeches, that poultry breeders are credited with a lot that is not their due. They have never made a new real race of fowls or even modified very much, in any important quality, any old race. Long ages made Leghorns, Polish, Games or any other real

race, just as was made a modern descendant of Alfred the Great, and for centuries just the same outcrossing and moderate inbreeding took place in both cases.

When we turn to the wonderful uniformity in a wild species of birds, which is such that even where the plumage markings are exceedingly complicated one specimen is an exact duplicate of the pattern of another, and in form, every delicate curve in each is repeated in the other as closely as the curves in sister ships; the method by which nature secures uniformity in her wild species is essentially the same that is exhibited in the marking of races of birds that have been domesticated. First, an immense number of crosses, and with them variations, some favorable, some not. Favorable variations as regards number of livable progeny prevail by mathematic law over the older type and over new variations that

are not improvements, and the constant outcrossing erases the inferior types and leaves all the members of the group almost as like each other as coins fresh from the mint.

\* \* \*

New traits, habits and peculiarities of body, also of mind, appear, some of which are capable of being inherited and others not. To this last class belong mutilations. Cutting off a quadded's foot never causes progeny to be born with but three feet, and this fact has been made much of by those who insist that characters acquired by the body can not be inherited, that only the generative system is the seat of heredity powers.

But the three footed condition was not acquired, it was thrust upon the victim. You may acquire a week's wages. If somebody to hide guilt drops a stolen pocketbook or watch into your pocket, you did not acquire

# E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks BARGAIN SALE FOR 1913

First Prize Cockerel and Champion Male and First Prize Pullet and Champion Female at Madison Square Garden, New York, 1913

Is the event in the Barred Plymouth Rocks; this sale stands out with a prominence that is clearly defined.

My special sale list is now ready for mailing and I offer the largest and finest assortment of Barred Rocks in all America at the most decisive price reductions and most emphatic bargains ever recorded.

## This Is America's Foremost Bargain Sale

And goes beyond anything ever before attempted in thoroughbred poultry. It is unprecedented. The resources of my "Ringlet" farm are unlimited and you can now secure Madison Square Garden, New York, winners and sons, brothers, sisters and daughters of New York winners, and birds of this richest New York prize winning blood at the decided bargain prices. Birds bought now at the prices in my special sale list will pay you splendid dividends.

## In This Special Sale List

Are listed the finest show birds, the finest breeders in single birds, pairs, trios and pens that I have ever offered in all my thirty-three years' career as a Barred Rock breeder, and at the rarest bargain prices. There are lots to meet the needs of all—the beginner who must begin right, the old breeder who will improve his stock, and the show man who wants to win in the strongest competition in the world. You will have the solid satisfaction of selection from the largest and richest New York prize winning stock and blood lines in America today—the selections are unbounded.

## The Imperial "Ringlets"

Are the proud product of more than a quarter of a century of Barred Rock breeding—they have the most fashionable barring and even blue color of the present day, they sell when no others will by reason of their matchless quality—no other strain holds so imperial a place in popular favor—their name leads all the rest. To meet success in winning prizes you must have my birds.

(See my ad on back cover page for the wonderful record of my "Ringlets" at last Winter's Madison Square Garden 1913 Show. This achievement takes rank in history as the most wonderful ever recorded since the New York show was founded.)

It will be to your interest to have this special sale list and take advantage of this opportunity to secure "Ringlets" at the cut down bargain prices. It is sound business judgment to buy what you want when offered for dollars less than it is worth, it is justice to yourself and economy. Whatever may be your wants in Barred Plymouth Rocks you will find it in my special sale list at bargain figures. The list will be mailed promptly upon request.

**EGGS** from the world's finest exhibition matings, \$10 per setting; four settings, \$35; 100 eggs, \$60. One-half these prices after June 10th. Elegant 70-page catalogue upon application. Address

those things. They were thrust upon you.

It is assuredly within the power of man to change, divert and subvert, not only the habit, but the color, form, dimensions and all else, physical and mental, in the formation of either fowls, birds, pigeons, dogs, rabbits, sheep, horses, cattle, swine, fish, etc. This thing is certainly everywhere. And be this physical or mental trait or characteristic created by crossing makes no difference.

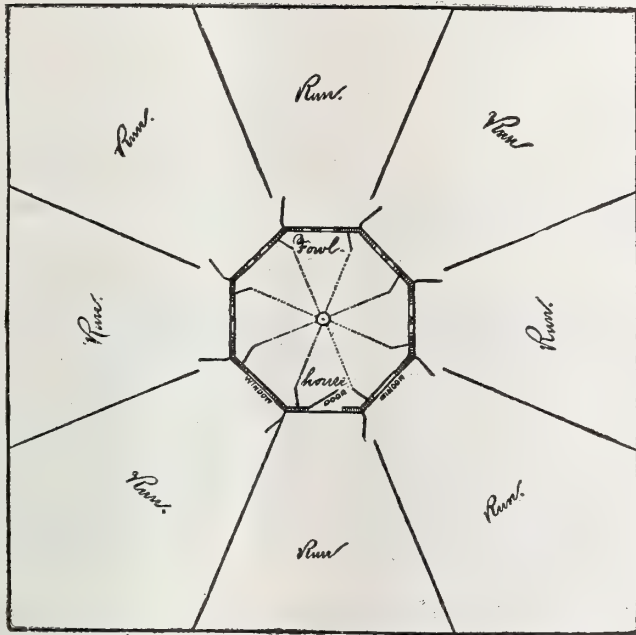

Man has changed, and made over, and brought back again, in form, size, color of plumage, and other natural or artificially created characteristics, say pigeons for example, in such diverse ways and shapes that their original parentage is unsuspected by either their possessors or progenitors, indeed!

It is beyond question a fact that the habits of the antelopes upon our western American plains, the tigers in the Eastern jungles, the whales in distant seas even, have been greatly changed by man; and not only the domestic,

spermatozoon must bear their parts before there can be heredity, but they do not directly receive the original impression of danger. The two microscopic specks with which every creature of sexual kind begins its individual life, transmit new qualities, as well as old, but it could not have had them to transmit had they not been experienced first by body, nerve and brain.

In the formal speech of the retiring chairman of the animal section of the American Breeders' Association, last winter, these words occur:

"The fundamental basis of all inheritance is to be found in the germinal constitution of the individual rather than in the body or soma. Those qualities alone are inherited which are innate in the germ cells, the ova and the spermatozoon. \* \* \* Genetics has demonstrated that the breeders may cast aside, for once and all, that mass of tradition and superstition which assumes that influences specifically affecting the body will specially modify

Ground plan for house for eight breeds, with convergent yards, published in 1877. See Notes from the Southwest in this issue.

but the shyest of the wild tribes of animals feel his influence. And it can not be assumed in this enlightened day that all tribes and species of animals or plants act and react upon other tribes with which they come in contact, without modification taking place, and this is particularly true with such of these as come under or within the influence of man.

Why raise the question: Can somatic (bodily) characters be inherited if recently acquired, when even mental habits can be? Wild animals on islands uninhabited by man are not afraid when people land on their shores. Birds alight on people's shoulders and drink from a pitcher in a man's hand. When they have learned men are to be feared, their young inherit that fear and flee from the first man they see without having been taught by their parents. Fear was simply born in them. The original experience of man as a danger menace to bird life was impressed on the physical (somatic) muscle nerve, and brain, not at first on the generative elements of the bird. True, ova and

subsequent generations."

Huxley and others pointed out long ago that physical, mental and moral constitutions pass from one generation to the next in and by two tiny specks of matter. But these minute bodies are no more "fundamental basis" of all inheritance than the body is.

Most certainly influences specifically affecting the body especially modify subsequent generations.

The body or "soma" has power to influence "the germ cells, the ova and the spermatozoon" and these last may transmit results. Environments modify races. Why are Caucasians, Hottentots and Esquimaux unlike? Answer—Special environments for ages. But a period of centuries instead of ages is sometimes sufficient for environment to show its power. The denizens of London slums became so undersized that the stature limit for eligibility to enlistment in the British army had to be reduced. The gutter toughs were wanted because good fighters and just the thing for "food for powder." It has been urged that the degeneration

## BUFF ORPINGTONS

Some cock birds and hens for sale from my breeding pen of this year. Write for prices.

Pat. Applied for. Agents Wanted

is superficial because good habits, food and dwellings and general sanitation can restore the original stature and weight to a generation descended from slum dwellers in a large city. Granted. And it the better proves that environment affecting the body will "specially modify subsequent generations."

\* \* \*

A friend in Nebraska writes asking what the scheme illustrated by Fig. 1, page 1061, July issue, has to do with the "colony idea," as stated in the description under the picture. Others may be mentally asking the same question and so I reply in type.

The colony idea involves simply keep-

for the white ones. The gray for the remaining third meant that these were unpainted and left to assume the weather-beaten tint of most tree trunks.

The essential principle does not consist in having the houses small and movable. They might be large and stationary for that matter. And some other device besides different colors might have been employed to make the birds know their homes. The flocks might consist of twenty birds or ten times that number. The attendant might travel in a one horse shay or on foot, or by airship, instead of on a stone cutter's dray, or as the same rig was called, "Providence low-gear."

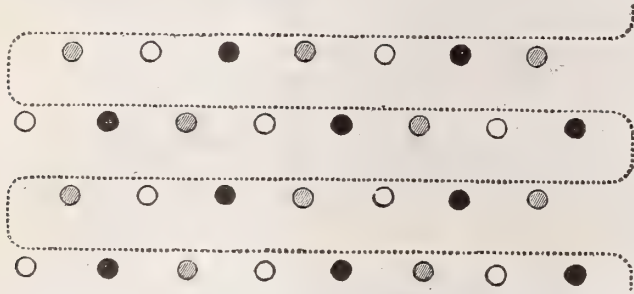

Fig. 3. Colony idea as originally illustrated in *American Agriculturist* in 1871. Circles represent fowl houses ten rods apart with no fences between. Dotted line represents road traversed by a low down wagon used in attendance, now replaced by auto car. See Notes from the Southwest in this issue.

ing several separate flocks of fowls on the same range without fences. As first published by me in 1871, there were a lot of small movable houses ranged in rows on thirty a-res, and with team hitched to a low down wagon, or stone cutter's dray, the attendant drove to them over a smooth road. See Fig. 3. In this picture the dotted line represents the road, and the circles the houses, which are equidistant and all alike save for the color. The quincunx or "break joints" style of the rows keeps every house as far away as can be done from every other house of the same color. Coal tar over rough boards was used for the black ones, whitewash

All these details cut no ice. The ruling object was to dispense with fences and make the mutual antagonism of neighboring flocks take their places.

The desirability of the (then) new Leghorns, on account of their persistent laying and very infrequent sitting, led many persons to try to keep and yard them, and then their provoking flying over high fences made the colony or no fence plan with small scattered flocks very attractive, but it was many years before it was extensively adopted. Prof. Dryden, in writing up Petaluma a few years ago, reported that more than 90 per cent of the poultry farms there were on the colony plan of Fig. 3,

all the houses being movable.

When I started the experimental farm of A. P. J. here I began with my thirty-seven year old colony plan, intending to have one hundred layers my regular unit or number to roost together, but had stationed only four wire covered roosts fifteen rods apart when the Rancocas unit, a la Foster, kept growing upon me and my experiments led me to adopt it finally.

But still the wide open range I must have anyhow, and by the arrangement illustrated in July number I can have units of large size ranging forty rods (or one hundred rods, acreage being sufficient) and without fences, this last qualification expressing the essential colony idea.

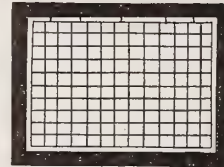

The word "colony" applied to poultry, as also the term "egg farm," were both coined by me in 1871. Neither as thus applied was ever written or printed previous to that date, but both are now very common in poultry literature. Words often acquire more than one meaning after awhile, and "colony" in poultry vocabulary has latterly been used to include various ways of domiciling flocks at considerable distances apart, whether with or without fences.

Harry Edelman, Pigeon Show; W. Theo. Wittman, Poultry Show

# Massachusetts Poultry Convention

Big Three-Day Meeting in Interest of Poultry Husbandry Held at Massachusetts Agricultural College

**T**HE THREE DAY POULTRY convention held at the Massachusetts Agricultural College, Amherst, Mass., July 28, 29 and 30, 1913, under the auspices of the college and the Massachusetts State Poultry Association, was undoubtedly one of the greatest poultry institutes ever held in this country and was so successful, so well attended and of such great interest that it may become an annual affair. In spite of a very heavy thunder storm on the opening day, the meeting started off exactly as planned and the full program was carried out with a large audience in attendance at each event.

The meeting opened Monday afternoon with over 250 present. Professor Edward M. Lewis, acting president of the college, welcomed the poultrymen and women of the state to the college with a few introductory and humorous remarks. He told them that if Professor Graham did not treat them right, here at the college, simply to report the matter to him and he would see that they were treated fairly.

J. L. Nix, president of the Prairie State Incubator Company, was then introduced. Mr. Nix's talk on "Artificial Incubation" was much enjoyed, not only because of the meat that was in it, but also because of the earnestness and energy with which he entered into the subject. Many of those present afterwards complimented Mr. Nix on his ability to speak upon the subject without once letting it appear that he is in any way connected with a company manufacturing incubators and brooders. The principal points brought out by Mr. Nix were that special attention should be given to supplying plenty of moisture during incubation, that the hygrometer should register somewhere from 60 to 65, that the temperature should be uniform, and the machine well ventilated. Great stress was also laid upon the fact that chicks should be given plenty of air as soon as hatched; that many chicks are hurt by being overheated in the machines and by lack of fresh air. He considers it important that the incubator cellar should be well ventilated, as not so much depends upon the particular type of incubator cellar, he says, as upon ventilation and management.

The Monday evening session was one of the most profitable of the convention. A general discussion was conducted on the problems of the poultryman, led by Mr. Nix, Mr. Graham, Charles Wood of Worcester, Judge Ballou, Rev. Samuel Knowles of Lexington, Mr. Withington of Bridgewater, Professor Phillips of the Indiana Agricultural College and others. Mr. Nix started the discussion by saying that the fanciers should be more practical and develop birds and stock that would produce fertile and hatchable eggs. This statement was made purposely by Mr. Nix in order to bring out a good lively discussion on the subject and very many good practical points were brought out by the speakers, especially the fanciers.

Dr. George S. Gage, of the pathological department of the college, spoke Tuesday morning on "Bacillary White Diarrhea." He had a most interested

audience, as the subject is one that has become of very great economical importance. It showed that the disease was transmitted from the adult bird through the egg. It was also shown that if a few eggs from infected hens were placed in an incubator with other eggs that the entire hatch would be infected. It was further shown that the best way to keep down the infection in a flock was to give them sour milk or buttermilk as soon as taken from the incubator. The lactic acid is a medium in which the bacterium which causes the disease can not live.

Mr. Nix entered into "Artificial Brooding" with the same spirit and

zeal that he did "Artificial Incubation." He impressed upon the audience that overhead heating is the best and that no other method of supplying heat had met with any great success. He placed diagrams before the audience of the various kinds of brooders in use, laying great stress upon the necessity of good ventilation without draft, not too much heat, and plenty of exercise and good wholesome food.

Mr. Graham then spoke upon the "Human Element as a Factor in Poultry Keeping." He first gave a history of the development of the modern breeds of fowls, showing how the human element entered in as the primary factor. It was also shown that on the whole our domestic fowls are rather plastic and that man can do within certain bounds almost anything that he has a mind to do, that the fowls can adapt themselves to many unnatural conditions. The fact was brought out

## HALBACH'S White Plymouth Rocks

### The Proven Strain

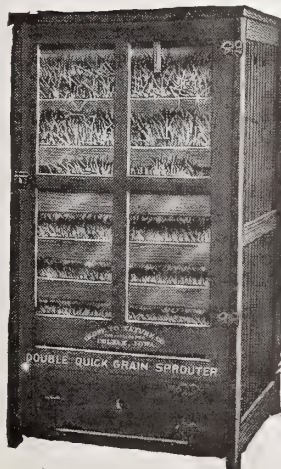

Grand lot of large cockerels and pullets for any show. More and better good ones than ever. Also show hens and cock birds that will win for you.

Remember my strain holds the world's record of winning best display at Chicago four times. In the last four shows they won more than 68 other breeders. At Chicago I won more than 23 others put together. Can more be said??? Compare this record with that of any breeder in the world.

Also bear in mind that they are layers of great worth. Send ten cents for catalogue. If you want the GOODS at big value for your money write to

H. W. Halbach, R. R. 1, Waterford, Wis.

## Eggs, Eggs---Sprouted Oats---Eggs, Eggs

MRS. LUCIE SHIELDS, MT. CARMEL, ILL., SAYS: "I have used your grain sprouter for six months with great results. It has paid for itself several times over by an increased egg yield."

L. T. DAVIS, CORSICANA, TEXAS, WRITES: "I have my No. 6 Double Quick Grain Sprouter and it does everything you claim it to do. It is indeed a great machine. Would advise any one in the poultry business, large or small, to get this machine for it will get the eggs any season of the year."

Sprouted Oats Is The One Great Feed That Never Fails To Bring The Eggs, And The

38 Front Street

Colfax, Iowa

that the modern hen is an egg machine and that we expect her to lay the year round and that we had developed in her this trait. Therefore, she must be cared for differently from the wild fowls that lay for only a short time during the reproductive season. Considerable stress was laid upon the fact that many of the failures in poultry keeping have been caused by a lack of the human factor, that people going into poultry business to make a living, treat the business in a very mechanical way, that on the whole they are looking for something that is automatic either in the way of a house, utensils, feed, breed, etc. These, of course, are important factors, but man is the most important of all. People who go into the poultry business, as such, should make a careful study of it just as they would if they were to embark in any other line of business.

Professor James E. Rice, of Cornell, spoke upon "Breeding Poultry for Egg Production." He gave a general summary of the work done along this line at Cornell, showing charts and photographs of the high and low producers. He brought out the fact that great strides had been made in breeding from the best layers and most vigorous birds. He also emphasized very strongly the fact that the first year's egg production does not determine whether the bird is really a high pro-

ducer, but it takes three years to determine this. His data shows that many hens during their first year were not extremely high producers, but during the second and third years made better records than many of those that laid well the first year.

Franklane L. Sewell gave a chalk talk on the standard types and ideals. He began on the jungle fowl of India and showed the various types of birds from which our modern poultry are developed. Mr. Sewell's talk was very interesting, especially from a historical standpoint.

The demonstration in killing, picking, dressing, etc., was attended by most of those present. The demonstration work was given by C. J. Kelley, foreman of the poultry yards. The various methods of killing and stunning, and the procedure in picking were shown. Birds are bled either by sticking through the throat from the outside or by cutting the jugular vein in the upper part of the throat, or by breaking the neck, according to the English method. The stunning is done by breaking the neck, as the English do, by striking the head against a block, or by striking the head with a club; also by piercing the brain through the roof of the mouth. Much interest was taken in this work, showing that the people are very anxious to prepare their birds for market in the best possible way.

Professor Rice gave a very interesting and profitable talk on the subject of "Recent Advances in Poultry Husbandry." In this lecture Professor Rice brought out the fact that great advancement had been made in all lines of our poultry work. For example, the incubation of eggs can be carried on with tremendously large numbers, a large number of chicks can be brooded in one flock, and at the same time hens can be kept successfully and profitably in flocks of several hundreds, and better methods of feeding and caring for breeders have been a factor in enabling us to get a large number of eggs in the breeding season that will hatch well. He believes that more advancement has been made along poultry lines in the last ten years than in any

other line of agriculture.

Mr. Sewell followed Professor Rice with another chalk talk on the modern types of poultry, showing the advancement that has been made in type.

The Wednesday morning session was held under the auspices of the Massachusetts State Poultry Association, with President George F. Eastman presiding. Mr. Eastman first gave a very valuable talk on the work that the association is doing, showing how it has at all times stood back of the college in helping get appropriations and that its aim has been to band together all of the poultrymen in the state if possible in one large state organization that can become much more useful not only in helping the college but in getting suitable laws passed to protect poultry interests of the state.

This was followed by an address by Dr. Goodale, research biologist in the poultry department at the college. Dr. Goodale showed the great difference in hens in an ordinary standard bred flock. Some were excellent layers; others laid one or two eggs. Then others laid none at all. The same thing was true in regard to the fertility and hatchability. For instance, from one hen there were hatched during the season 66 chicks. From other hens laying a large number of eggs practically none, at least a very few, were hatched. Then again eggs from hens that laid two or three eggs hatched well, while others that laid a small number hatched poorly. The data obtained along this line was very interesting. For instance, one hen went on her nest daily and pretended to lay, but never laid an egg. As the season advanced, she became broody, showing that a broody hen is not a sign that she has laid eggs. The main point of the discussion pointed to the fact that the farmer or poultryman, if he could only select his best hens, would need to keep very few breeders, also he would need to incubate but very few eggs to get his required number of birds for the next season.

Then followed the demonstration in caponizing by Henry D. Smith. This is always interesting and hundreds of people were shown by Mr. Smith just how the operation is performed. Mr. Smith being an expert in this line, made it not only practical but interesting indeed, as he can caponize two a minute if they are handed to him. He opens the bird only on one side.

The convention was pronounced a great success. Professor Rice said that he believed it was the largest gathering of poultrymen ever held in the country, as more than 500 attended. There have been meetings during Farmers' Weeks when more men have gathered together to listen to a lecture on poultry, but as a meeting where the people have come, all interested in just the one subject, it is, so far as we know, the largest ever held in the United States.

From the expressions of those present it seems wise to make the gathering at the college an annual affair, as many of those present said they were coming another year if we have one and bring their families with them. They also said, many of them, that they were the sole representatives from certain districts in the state. It might be said that the majority of those present came from a long distance. Practically all the states in New England were represented, also New York, New Jersey and Pennsylvania.

## Recent Inventions For Poultrymen

### Novel Poultry Equipment Invented By Poultry Keepers Patented in July. Brief Description of Most Important

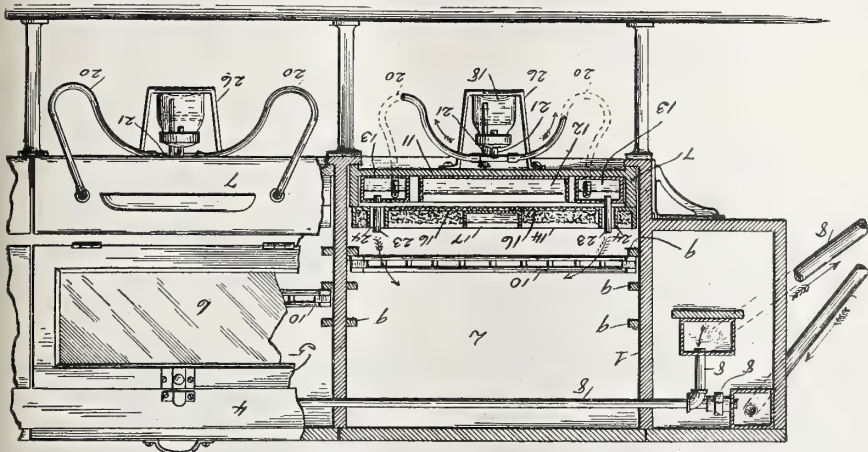

BY LESTER L. SARGENT, PATENT ATTORNEY, WASHINGTON, D. C.

OTTO A. HENSEL, of Pittsburgh, Pa., has invented an incubator in which chicks are produced under hygienic and natural environments, resulting, he claims, in a healthy, strong brood. The new features of his incubator are a pan partially filled with water; another pan above it, of fine mesh wire, containing a quantity of earth mixture with loam or leaf-mold; a small receptacle containing soda, lime

or receptacles are provided to discharge the oxygen above the level of the earth pan into the incubator proper, and nourish the embryo or live chicks therein. In other respects the operation of the incubator does not differ materially from those now in use. The patent number is 1,068,128.

A new egg-tester has been invented by William Rigling, of Hamilton, Ohio. It is designed to be used with an ordi-

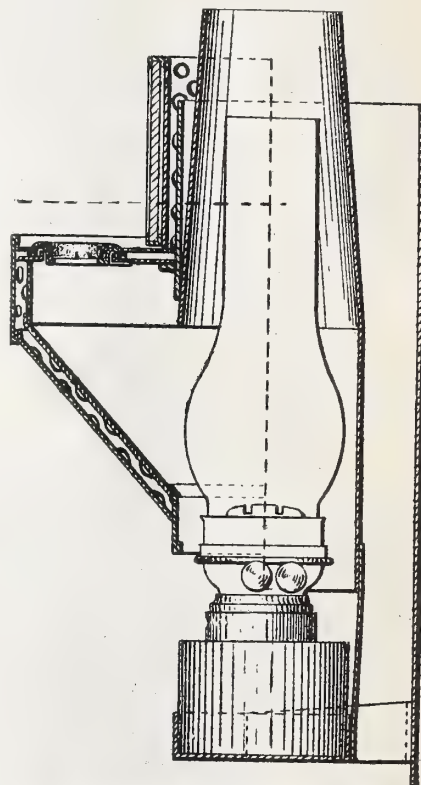

curved reflector. At each side of and above the lighting agent are mirrors, so arranged that a satisfactory view can be obtained of all portions of all eggs, no one egg seriously interfering with the satisfactory view of any of the other eggs, and no turning of the

Incubator patented July 22, 1913, by Otto A. Hensel, Pittsburgh, Pa. No. 1068128

or charcoal, to absorb poisonous gases thrown off by the eggs at certain periods of incubation; and, underneath, an oxygen generator (a covered jar filled with sulphuric acid acting on barium dioxide) having flexible tubing communicating with compartments of the moisture pan, for the purpose of retarding and washing the flow of oxygen from the generator. Exit tubes from the top of each of these compartments

nary lamp. The backpiece and walls are arranged to form a vertical flue, open at top and bottom, and the double front walls of perforated metal are also provided to afford a peculiarly free circulation of air and lessen the danger from fire being set by heated metal parts. The eggs are placed in a series of egg-receiving cells in the form of an are above and around the lighting agent, and tested by sight. Below is a

Egg Tester, patented July 1, 1913, by William Rigling, of Hamilton, O. No. 1066050

eggs being required. Patent No. 1,066,050.

A novel device for preventing hens from setting has been patented by Eliza J. Fulton, of St. Louis, Mo. It comprises a wire structure having depen-

## BABY CHICKS

Will have no more chicks until March, 1914. Catalog free. 20th Century Hatchery, Box 73, Chatfield, Ohio

**S. C. BUFF LEGHORNS, 22 YEARS**  
**COLUMBIAN ROCKS, 8 YEARS**

Prize takers. The please buyers. Old and young stock for sale. **J. Quincy Dawson, Coshocton, Ohio**

## THE PARADISE WAY

Insures greatest success in hatching chickens. Satisfied customers throughout the world. Write now for big free circular.

**Elmer S. West, Box 97, Ewing, Ky.**

## THE EGG RECORDER

Patented—Will sort laying and paying hens, from poor ones which eat up the profits. Every hen should clear \$2.00 a year. Do you get it?

The Egg Recorder, 283-285 Fifth Ave., Brooklyn, N. Y.

## PULLETS AND YEAR-OLD HENS

S. C. Buff Orpington and Partridge Plymouth Rock. Extra good stock. Two Reeves Pheasant hens and one pair Golden Pheasants, full plumage. One Amerst cock, full plumage. Young and old Embden geese. Mention American Poultry Journal.

**JENNIE MILNER -- NORMAL, ILLINOIS**

## FALL

hatching is a success if you let the **Magic Egg Tester** pick out the eggs you are going to use. If you buy now you get the longest time for trial. One Tester (with absolute guarantee), by mail \$2.00. Your money back after trial if desired. Ask for circular and testimonials. Mention A. P. J.

**MAGIC EGG TESTER WORKS, Dept. B, Buffalo, New York**

## GOLDEN AND BUFF WYANDOTTES

That have won for me and others at New York, Chicago, Kansas City and Omaha. Will sell single birds, pairs, trios and pens in either young or old stock. Satisfaction guaranteed. Mention A. P. J.

**J. S. Pennington Box A Plainfield, Illinois**

## "Ringlet" Barred Rocks

This is the month to hatch winners. Our \$2 per setting eggs are from fine quality cockerel matings. The \$4 and \$5 per setting eggs are worth twice the price. Two dozen fine cockerel-bred yearling hens at \$2 each after June 1st, also two fine yearling cocks \$5 each.

**HIGHLAND POULTRY FARM**  
**Fred Erdman, Prop., Normal, Ill**

## MADISON SQ. WINNERS

Over 43 prizes and specials in the Garden. 4 firsts on Rose and first on Single Comb Brown cock in one year.

The two best strains of Browns bred. They win. They are large and lay up to 242 eggs

to a pen. Large eggs.

Lots of breeding stock as well as show stock of above breeds.

**Rose Comb White Leghorns**—Large white birds, large eggs, 244 eggs to a pullet best record. Winners.

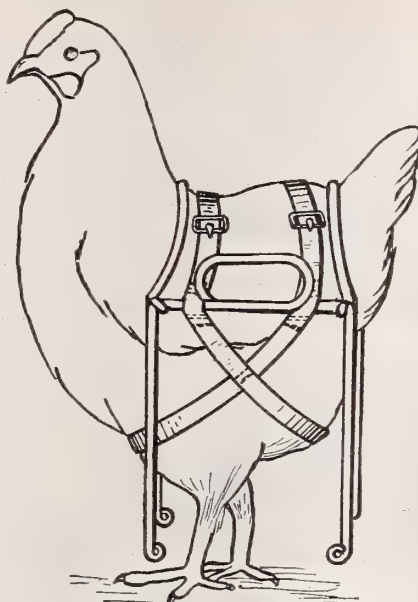

**Single Comb Whites**—236-egg strain. Plenty of white low-tailed cockerels.

**White Wyandottes**—Duston and Regal. Cup winners.

**Barred Rocks**—Bradley. S. C. Reds—Tompkins. Catalog.

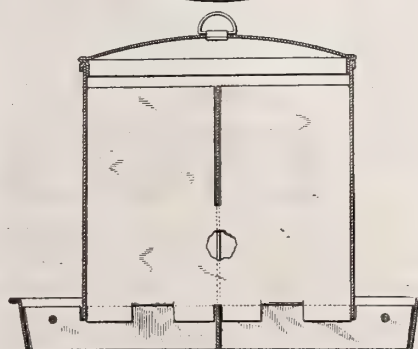

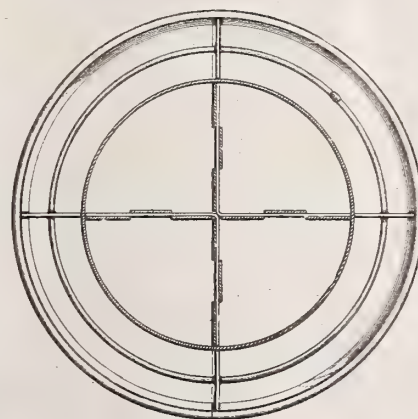

**W. W. Kulp, Box 70, Pottstown, Penna.**

dent legs, which clear the ground when the hen is standing but effectually prevent the fowl from assuming a sitting posture. Any suitable means such as straps are used to secure the device to a hen. Patent No. 1,068,121.

Device for preventing hens from setting, patented July 22, 1913, by E. J. Fulton, St. Louis, Mo. No. 1068121

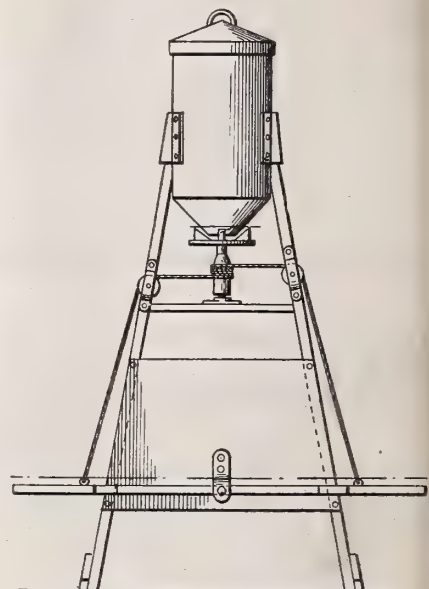

Herman F. Leichtfuss, of Milwaukee, Wis., is the inventor of a new poultry feeder for economical feeding. This is effected by a circular trough, which is divided by division plates into sectional compartments to prevent scattering of the feed longitudinally of the trough, and having a fender or wire hoop divid-

Poultry Feeder, patented July 22, 1913, by H. F. Leichtfuss, Milwaukee, Wis. No. 1067824

ing the trough in halves to prevent the poultry from scattering the feed by "billing" in a radial direction. Patent No. 1,067,824.

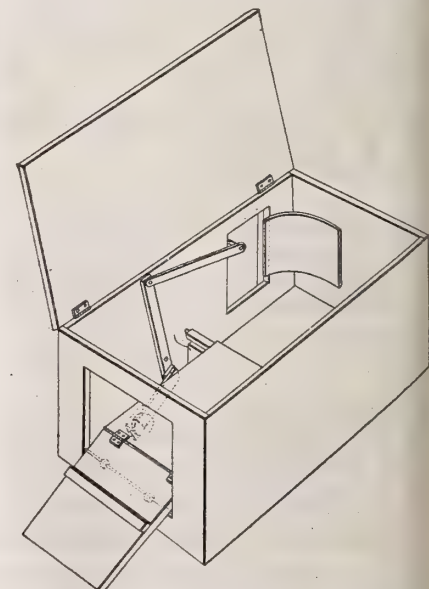

A poultry-feeder has been patented by Max H. Hinkle and George E. Fritz, of Blackhawk, Colo., which also serves the purpose of exercising the poultry. Grain is fed from a hopper to a distributing disk. This disk is rotated by a cord attached to a lever, which is pivotally mounted and arranged so that

Poultry feeder patented July 15, 1913, by M. H. Hinkle and G. E. Fritz, Blackhawk, Colo. No. 1067338

when the bird steps upon it, it will rotate the distributor and throw off the grain. The inventors state that from practical experience they have found that the fowl soon learn how to feed themselves with this feeder without care or further attention from their owners. Patent No. 1,067,338.

Several trap nests or automatic nest boxes were patented during July. Possibly the most interesting of these is that invented by Ward J. Holly, of Pewamo, Mich. (Patent No. 1,067,340),

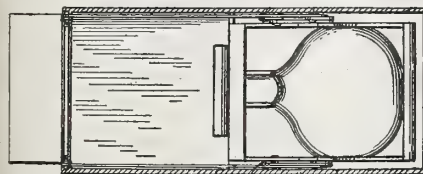

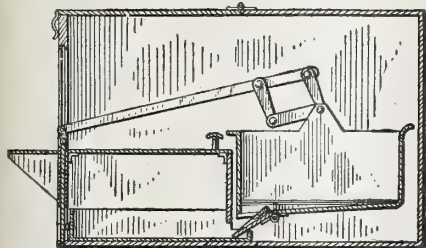

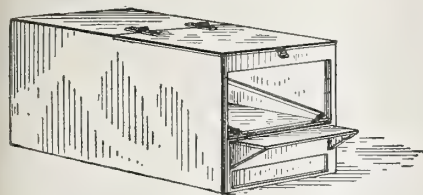

Trap nest patented July 15, 1913, by Ward J. Holly, Pewamo, Mich. No. 1067340

employing a pivoted platform, weight upon which closes the entrance door, and having a separate exit door, the opening of which by the hen reopens the entrance door, the hen being compelled to enter through one opening and

vacate by another, so that layers are separated from idlers automatically.

An automatic nest box (Patent No. 1,068,794), invented by John T. Mason, of Kewanee, Ill., is arranged to automatically close the door when the hen enters and to automatically open it

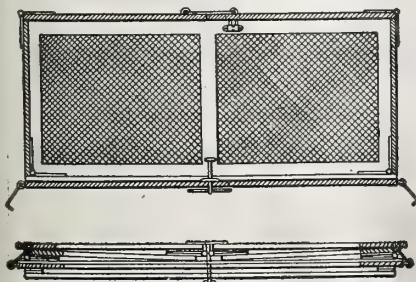

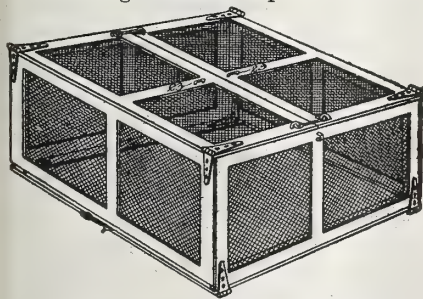

Automatic nest box patented July 29, 1913, by J. T. Mason, Kewanee, Ill. No. 1068794

when she climbs from the nest, and includes a novel, separate, enclosed tray into which the egg is discharged through a trap door from the nest.

Frank J. Schisler, of Winthrop, Minn. (Patent No. 1,068,084) and James W. Thompson, of Champaign, Ill. (Patent No. 1,068,373), are recent inventors of trap nests designed to entrap the hen until released by hand.

A folding chicken coop has been in-

Folding chicken coop patented July 1, 1913, by W. T. Phillips and James Shelton, Florence, Ala. No. 1066418

vented by Wm. T. Phillips and James Shelton, of Florence, Ala. It is especially adapted for use in transporting chickens from one point to another, and when empty may be transported at minimum expense. Patent No. 1,066,418.

## CHERRY REDS ARE WINNERS

Both as show birds and layers. Young cockerels for early shows. Write for prices, mention A. P. J. ERNST F. BIRKHOFF, WILLOUGHBY, OHIO

## RANKIN'S ROSE AND SINGLE COMB Rhode Island Reds

Our 1913 Matings have produced some of the best "Reds" ever bred. Now is the time to order birds for fall and winter shows from our Philadelphia, Cleveland and Pittsburgh blue ribbon winners. Mating list free. Mention American Poultry Journal.

## This Roofing never costs a Cent for maintenance

Broadview Poultry Ranch, Hubbardston, Mass., 266 ft. long, covered with J-M Asbestos Roofing and Asbestoside

It's false economy to put your money in a "cheap" roofing that has to be painted, graveled or repaired every year or two. The real cost of a roofing is the purchase price plus the cost of maintenance. J-M Asbestos Roofing is the only ready roofing that never requires a single cent's worth of coating, graveling or other protection. Therefore it costs less per year of service than any other roofing. This roofing never needs any protection because it is made of layers of stone (Asbestos) felt securely cemented together with Trinidad Lake Asphalt. It is mineral through and through—literally a sheet of pliable stone. There isn't a particle of perishable material in

## J-M Asbestos Roofing

Is it any wonder that this stone roofing is not affected by rain, heat, cold, salt air, chemical fumes, etc., and that it affords absolute protection against fire? And is it any wonder that this roofing is still in good condition on hundreds of roofs after more than twenty-five years of service?

J-M Asbestos Roofing comes in rolls ready to lay; also furnished in built-up form. Suitable for any type of building. Easy to lay. J-M Roofing Cleats, packed in each roll, make absolutely water-tight laps and give the entire roof a handsome white appearance.

Your dealer sells J-M Asbestos Roofing—if not, order from our nearest branch. Write for sample of the curious Asbestos Rock from which this Roofing is made and our Book No. 2726

# Poultry Publicity

by Louis A. Stahmer

IT IS only a very few years ago since the breeders of fancy poultry began to give the advertising proposition serious thought. Competition was not very keen before that period, and large display advertising practically unknown, and in many cases a mere notice in the poultry papers would dispose of the breeders' stock in a short time, after which the advertisement was discontinued, or, as some did, left standing unchanged the year round. The industry has advanced very rapidly since that time, and competition is now keener than that of many other lines of business. In the United States alone, over one hundred periodicals are devoted to the poultry subject exclusively. Advertising space has increased in cost on account of the greater circulation of the periodicals and higher cost of labor. Advertising itself has become a scientific trade of its own, and high-salaried men in this line are giving their best efforts to produce profitable results for their clients, and are making investments for them which rapidly become an asset of the business, if the proposition is handled judiciously. Quite a few poultry breeders are under the impression that advertising is an expense. It is, indeed, for many of them, but there are also many that are get-

ting great results, and they are generally the ones that have given the advertising proposition the necessary thought in order to obtain the desired results from their investment. From an advertising standpoint, the poultry business is peculiar in many ways; especially the writing of the copy for a good ad requires a man thoroughly familiar with all the peculiarities of the business, and the most successful ad writer in this line is either the breeder himself or a man who has come in frequent contact with the buyer and seller, thus gaining information that enables him to put selling value into the copy. Hundreds of breeders in America can produce fine specimens of their respective breeds, yet when it comes to selling them they are up the "stump" for not knowing how to present their stock to the buying public in the best manner. One of the greatest mistakes generally made by quite a few of the breeders is that they put off writing the copy for their ad until the last possible minute, and for that reason give no thought to the convincing arguments necessary in every advertisement. As it is, the copy reaches the paper two or three days late, and probably does not get a very good position on this account. Waiting patiently for inquiries

that never come, on account of a poorly constructed advertisement, they condemn the mediums and wail about the advertising expense. The trouble with too many of our breeders is this: They have not kept up with the procession in the advertising line; in fact, they really do not know what advertising is, and for that reason do not get the results they should. In olden times, before railroads were in existence, and when the parcel post was unheard of, trading in any commodity was confined to the immediate surroundings of the town where the seller lived, and the "town crier" used to be, so to say, the voice of business. Nowadays your advertisement must represent the "town crier," and as there are many of these "fellows" in the modern poultry or live stock journals, conditions are entirely different than what they were before, and results depend altogether now on the personal appearance and arguments offered by your "crier" and backed up by you with more convincing proof. Perfect check can be kept on the modern "crier," and results can be measured and proper credit given, but it stands to reason that a medium which reaches the greatest number of buyers, who are willing to pay the price which you desire to get for your stock, offers

the best opportunity for your advertising investment. There are several methods of advertising; for instance, there is the direct and the indirect. The direct method is a good one, but cannot always be applied, for it would not do you any good to go out into the street and jog people by the elbow, calling attention to your stock. While it would work perhaps fairly well at a poultry show or a country or state fair, the greatest drawback to this method is that the results are not in keeping with the great amount of personal attention necessarily given by this direct method of advertising. By the indirect method "you" can appear in every town in the country on nearly the same day, and can jog millions of people by the elbow, calling attention to your stock. You must, however, do it gently, but in a convincing way. You will notice I said "you," for your personality must appear in the ad. It must do the work by such forceful arguments, aided by suitable attraction, that it will bring home the "bacon." If your advertisement has been constructed along these lines, you can go fishing, play tennis and golf now and then, and let your "double" do the work while you take a day off. A valuable factor and necessary adjunct to the indirect advertising method is your stationery and catalog. A handsome, rich-appearing letterhead is a business builder, while, on the other hand, if it does not correspond in quality of appearance and text with your advertisement in the papers, it will become a business knocker instead of a booster. A sloppy letterhead is not worthy of a first-class poultry farm. They do considerable more harm than you can imagine, and are likely to make a prospective customer judge by comparison, and, instead of acting like a long-distance handshake, they act like a slap in the face. Your letter is your salesman and meets people unknown to you. It goes into the home of the millionaire and also into the humble cottage of the workingman. For that reason prepare your salesman so that "you" can meet either. I say "you," because your letter represents you. It talks in your own language, and all that is needed is to clothe him right, to give the prospective buyers a mental picture of your person and character. What I have said about stationery applies also to your catalog, which, like your letterhead, must represent your stock and your personality in the clearest manner possible. If you are unable to write the text for your catalog properly, then jot down your thoughts as they come to you roughly, and with the assistance of some one more familiar in preparing articles for publication get it into shape for the printer. Start your next season's catalog the minute your old one is off the press, for it will take considerable more time than you expect in order to produce convincing, sales-inducing articles for the book. Show plenty of good illustrations, for pictures can talk in every language and leave impressions on the mind which cold type can never produce. You will notice I said "good" illustrations. I really mean the best ones that you can possibly get, and, above all, never print pictures that do not show the type of your respective breed to the best possible advantage. For, remember, "shape makes the breed." We see, too often, cuts of first-prize winners that do not do justice to the splendid shape which the

specimen naturally must have possessed in order to win at a large show. Naturally the advertising value is destroyed with a picture of this kind. When preparing your advertisement, or when you write your letter or text for your catalog, put yourself into the prospective buyer's place. Ask yourself the questions that he is liable to ask of you; then let your ad and your letter and your catalog be the true answer, such as you would expect. To make advertising of all kinds attractive requires the assistance of the artist and engraver. It has been said that "Art is simply a beautiful way of doing ordinary things," but it cannot be denied that there is a difference in the character of the work turned out by artists just the same. Especially the making

of a good poultry picture is practically limited to the specialist, and the most successful one is generally a breeder himself or one who comes into constant contact with this particular class of trade. Then the engraver must be taken into consideration. To the average buyer a half-tone is a half-tone. But let me tell you that there is as much difference in quality as there is between two different priced suits of the same color. It requires artists in this line just as well as it does for making the original pictures, and it stands to reason that a firm doing considerable poultry engraving will in time become extraordinarily efficient in producing cuts that will show the desired points in the pictures.

## White Rocks and White Wyandottes

Write now, right now. We have the best quality we ever raised this season, in young stock and know that we can please you if favored with your order. Try us and be satisfied. Remember we have a record for years back. At Boston's Great Show, 1913, we won four out of five firsts. Baltimore, Md., 1912, five firsts on both breeds. As we did not sell any early hatching eggs, it enables us to raise a larger number and of the best quality. Telephone Marlboro Exchange. Mention American Poultry Journal when writing.

### ROCKANDOTTE FARM

W. R. Graves Route 3, Southboro, Mass. Mrs. S. H. Graves

## Sign of The Times

Pape's strain of single comb Black Minorcas just won 1-2-3-4 cock bird; 2-3-4-5 hen; 1-2-4 cockerel; 1-2-3-4 pullet; best pen and display at the Greater New York Show. These winning ought readily to convince anyone that we are headquarters for show birds.

If you are interested in stock that will yield large white eggs and many of them. Let me know your requirements—prices are attractive. Mention A. P. J.

CHARLES G. PAPE

Box 74 Fort Wayne, Ind.

## Germozone Twice a Week

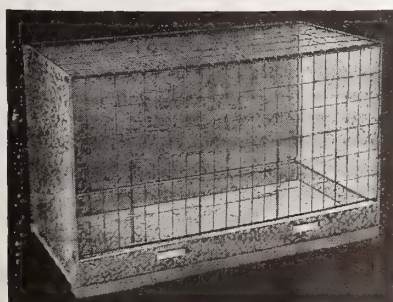

Chickens, feeding from the floor or ground, are especially liable to sickness from impure, musty or spoiled food and drink. They are also subject to easy infection of the mucous lining of mouth, nasal passages, eyes, throat, crop and bowels. Germozone, given in the drinking water, insures purity of the water and also of the food taken before or after. It regulates the bowels, giving those slaty-colored droppings, tipped with white, that every old poultryman knows mean health.

Then, too, for Roup, Canker, Colds, Sore Head, Swelled Head, Chicken Pox, etc., Germozone is a ready remedy, easily used and very effective.

Don't put off using Germozone until your birds become sick. It's easy to keep a healthy hen healthy, but it's hard to cure her and still harder to get her to laying again. Learn the "LEE way" "Lee's Poultry Book" and "Pointers for the Amateur" are both free.

Germozone may now be bought at almost every town; over 10,000 dealers in the United States. 50c per 12-oz. bottles. Sample mailed free for 10c. Made only by

GEO. H. LEE CO., 1101 Harney St., Omaha, Neb., or Los Angeles, Cal.

## GET READY

Buy coops now for county and state fairs. We make training and exhibition coops, brood, setting and colony coops, fireless brooders, portable hen houses, trapnests, portable fences and runways, collapsible show coops to coop poultry shows, etc. We will be at the state fair, Springfield, Illinois, under a large tent south of the Dome Bldg., next to the covered walk on lot 90 don't fail to see us there. Write now for catalogue, it is free. Address

Niemann Bros. Mfg. Co., Box 677, Mt. Olive, Ill.

# Current News of the Poultry World

by J. F. Shureman

A special attraction during poultry show week at the National Conservation Exposition at Knoxville, Tenn., September 23 to 27, will be a poultry institute conducted by experts from the Bureau of Animal Industry, United States Department of Agriculture.

A. B. Seymour, a wealthy mine operator of Plumas county, California, has purchased 1,600 acres of land near Bidwell Bar, Cal., and is planning to establish one of the largest poultry plants on the Pacific Coast at that place.

It doesn't pay to steal poultry in the vicinity of Lebanon, Pa. Three chicken thieves were recently apprehended and convicted and Judge Henry, of Lebanon, sentenced two of them to the penitentiary and fined the third fellow \$500 and costs.

J. N. Price, of Kinston, Wayne county, N. C., will please step forward and accept the championship belt. He claims to have a Light Brahma hen that lays fourteen eggs a week regularly, or two eggs daily, including Sundays. Mr. Price is ready to gamble that he can prove it, too. He gets the belt.

The Shawnee Poultry Farm Company, of Shawneetown, Mo., was incorporated

in June with a capital stock of \$6,000. The incorporators are J. H. Fischer, Silas W. Morgan and H. R. Stevenson. The company will engage in the breeding of poultry on an extensive scale.

Two hundred and twenty-eight poultry raisers, all from Grayson county, attended the first annual fried chicken banquet held recently in Sherman under the auspices of the Grayson County (Texas) Poultry Association. It was shown that from 1,000 to 2,000 dozen eggs and 2,000 pounds of poultry per week are shipped from Sherman.

Messrs. Scheid & Ream, proprietors of the Pennsylvania Poultry Farm at Lancaster, Pa., have purchased the ten White Leghorn hens entered in the laying contest at Mountain Grove, Mo., by Tom Barron, of Catforth, England, for \$500, or \$50 each. These ten hens made a record by producing 227 eggs in April and it is expected that when the contest closes next November they will have averaged over 200 eggs each for the year. The hens will be sent to Lancaster after the close of the contest.

Dr. Walter Pruce, chief of the experimental poultry farm at Pergamino, Argentine Republic, who has spent several months in this country, investigating American poultry methods,

sailed from New York the fore part of July with a cargo of more than five hundred chickens, representing fifty-one varieties, purchased from poultrymen in various states. He also took with him 300 tons of American poultry appliances, including portable houses, feed mills, bone mills, incubators, brooders, and a general line of poultry supplies of all kinds. He was accompanied by several American poultry experts who will introduce American methods of poultry breeding among the farmers of Argentina.

Louis Funcke, proprietor of four retail poultry establishments in New York City, was recently fined \$250 for selling cold storage poultry without giving notice that it had been refrigerated.

The contract for the erection of the new poultry exhibition building on the State Fair grounds at Syracuse, N. Y., has been let to the John Keeler Building Company, of Albany, N. Y., and work has been commenced. The contract covers the construction of the building and the installation of the plumbing at a total cost of \$79,600. It is to be one of the most complete buildings of its kind in the country.

Floyd Dillingham, of Sullivan, Ind., recently broke open an unhatched goose

#### WHY WORRY

About those coveted prizes at your fair or early show when for a few dollars I can supply you with birds with which you can win.

#### WHY WORRY

About selected breeders to infuse new blood or vitality in your flock when I can supply you with strong vigorous farm reared birds with blood lines no other White Rock breeder can give you.

#### WHY WORRY

About having eggs for your table this Winter when for a few dollars you can buy a utility flock of me that will produce you not only eggs for your own use but eggs to sell to your neighbor who has a variety of fowls that lay only when eggs are cheap.

Send for our special sale list, it is free and will interest you, I know. Write us, we want you to get acquainted.

U. R. FISHEL : BOX A : HOPE, INDIANA

egg that had been incubated and found a gosling with four legs, four wings and three bills! Next!

A "Swat the Rooster" movement has been started by the members of the Northwest Missouri Poultry Fanciers' Association, and the farmers and breeders of the entire state are being urged to join in the movement. It is being argued that the State Legislature would be justified in proclaiming the first day of June as "Rooster Day" and urging the farmers and poultry raisers of the state on that day to kill, sell or separate the male birds from their flocks. It is estimated that millions of dollars' worth of Missouri eggs are lost each season because of being fertilized. "Swat the Rooster from June to October" is the slogan of the new movement.

According to a careful estimate, the poultry products of McPherson county, Kansas, amounted to a total of \$217,723 for the year ending on March 5, 1913. Quite a bit of "pin money," that.

The plant of the X-Ray Incubator Co., for a number of years located at Wayne, Neb., is to be removed to Des Moines, Iowa.

Jared C. Swift, of Foxboro, Mass., has a Brahma Bantam rooster that recently hatched five chicks from five eggs. The little chap manifested a desire to set, and Mr. Swift, in a spirit

of fun, placed five eggs under him. He stuck to the nest like a veteran until the chicks hatched and now he struts around with them, caring for them the same as would a hen.

Here's a hot weather story from Nashville, Tenn.: A hen belonging to O. B. Childress laid an egg in an unused poultry house with a low metal roof. Mr. Childress, on July 2, found a live chick in the house, the heat of the sun on the metal roof having incubated the egg!

Women poultry breeders of Des Moines, Iowa, have an association all their own, known as the Women's Poultry Association. They hold regular meetings at the homes of the members and instead of discussing the latest styles in dress and millinery, and wasting their time in idle gossip, they discuss poultry subjects. A meeting was held at the home of Mrs. Jeff Crawford early in July, the subject for discussion being "Forcing the Moults." There's some sense to a proposition of this kind.

The J. W. Miller Incubator Company, of Rockford, Ill., has purchased 80 acres of land near that city and will establish a poultry experimental farm on the tract at once.

A market could be found for the product of 62,000 laying hens in Spokane, Wash., and the territory served by it as a jobbing center, according to W. H. Hagan, manager of the Hazelwood Company, the largest importer of

eggs in the Spokane country. It is estimated that for several years the importation of eggs into Spokane from eastern states has amounted to approximately 100 carloads annually. Each carload contains 400 cases of 30 dozen each, so that practically 1,250,000 dozen eggs have been shipped into Spokane annually for distribution throughout a radius of 200 miles or more.

The buildings on the poultry plant of A. P. Ward & Son, near Calistoga, Cal., were recently destroyed by fire, together with 4,000 pullets and chicks. The loss is estimated at \$5,000, with no insurance.

The largest electrical hatching plant in the world is owned and operated by Frott Bros., Plymouth, England. They have ninety-four incubators, each of about 500-egg capacity, and the average output is about 8,000 chicks a week. The hatching is all done by electricity.

Mrs. Joseph Slivka, of Cleveland, Ohio, claims to make a profit of \$10 a month from a flock of 45 hens, selling the eggs to the neighbors.

A sitting hen belonging to Arthur Lynch, a farmer living near Ackley, Iowa, died on the nest six days before the eggs were due to hatch. Lynch buried the hen and left the eggs in the nest, and fourteen chicks hatched from the fifteen eggs.

## Fishel's World's Best White Wyandottes

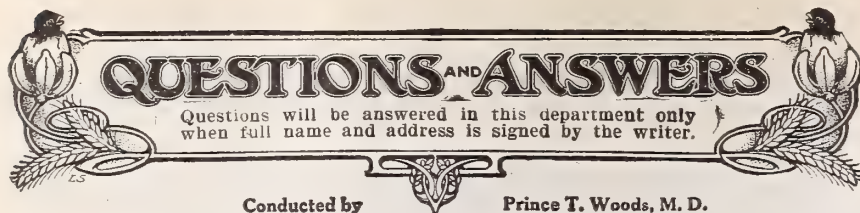

Upwards of 500 yearling cocks and hens, the very cream of our 1913 matings, must be sacrificed within the next thirty days. We invite you to write us if you contemplate going into the poultry business or desire high class breeding and exhibition stock. These breeders must go at \$3.00 and up.

**YOUNG STOCK**—This has been our most successful year. Fifty cockerels, February hatched, at \$3.00 to \$25.00 each. 150 pullets, February hatched, at \$4.00 each.

**SPECIAL**—Let us fit you out for the show with a cock, hen, cockerel and pullet. Birds that can successfully meet any competition. Can we quote you prices? Write today for our illustrated catalog, mailed for twenty-five cents in stamps or coin.

**J. C. Fishel & Son : Box J : Hope, Indiana**

Conducted by

Prince T. Woods, M. D.

**Large Flock Production and Fertility.**

Q. I have been breeding up small flocks of Rose Comb Black Minorcas for egg production for past seven years and believe I can not get better results than I am now getting. Here is my egg record for February, March and April for a flock of 52 Minorcas: February, 1,121; March, 1,026; April, 1,000 eggs.

The flock consists mostly of yearlings. These birds are well fed and have practically free range. If I can get such results from 52, don't you think I could do equally well with a larger flock? J. B.

Broadway, Va.

A. That is very good laying, even for the season, which is the heavy yield season of the year. With equally good care you should be able to get similar good results with larger flocks.

Several old timers, we know, claim to get better egg yield and better fertility from flocks of 100 or 150 layers than from flocks of 15 to 25 fowls. A letter from J. W. Dwinell, Danvers, Mass., dated July 28, contains the following on this subject: "My best yield and fertility this season came from a pen of 125 yearling Reds mated with five cockerels. I think too many males injure fertility rather than help it. I have one pen of 65 hens with

only one cockerel and have just had a hatch of 12 chicks from 14 eggs from this pen." The 20x20 ft. open-front house with from 100 to 125 layers and breeders in the flock is becoming a popular unit with breeders of utility fowl in the American classes and reports of egg yield and fertility are uniformly good.

**Off-Colored Yolk.**

Q. I have a fine flock of S. C. White Leghorns. Eggs are gathered once a day and when kept are in a temperature of about 60 degrees for not more than 5 days. A few eggs are blood stained and unfit for use. What is the cause of the yolk of an egg being almost white? E. P. F.

West Park, O.

A. You will always be likely to get a few eggs that are blood stained and unsalable. It can't be helped. As to color of egg yolk, some birds habitually lay eggs with off colored yolks. Such specimens are not helped much by special feeding. With the run of the flock you will usually find that feeding an abundance of fresh green food, particularly fresh cut clover and alfalfa, helps to put a rich golden color into the yolks. Fresh cut green corn fodder is also a help, as also are an abundance of insects and worms on range.

Good meat food, with yellow corn and an abundance of greens, helps to color yolks. Range on clean marsh or bog land is also a help in getting color into egg yolks. With some flocks running on salt marsh land we have found yolks so red that the customers complained of them as being too highly colored.

**Forcing the Molt.**

Q. My hens are molting and I want to force the molt. Want to get them through as quickly as possible. Please give directions for feeding to force the molt. T. B. T.

Richmond, Va.

A. We do not advise forcing the molt. We believe that such practice does more harm than good. Frequently when molt is forced a second molt comes a few weeks or months later. Don't try to force the molt. Let them molt naturally and normally.

You will get best results in molt if you turn your birds out in an orchard or pine grove during the hot months and let them roost in the trees. In Virginia you could leave them out until well into November before housing again. When you house them put them in an open-front house. Feed your fowls well on a good variety of sound grains, an abundance of green food, plenty of some good meat food, and let them live in the open air as much as your climate will permit and you will have no reason for wishing to force the molt. With us, yearlings, that molted naturally in the open, went into winter quarters last season looking as trim and neat as pullets.

**Eye Troubles in Chicks.**

Q.—I have about 40 chicks four weeks old. Out of this bunch there are four that have eye trouble. The lids stick shut. There may be a little swelling, but not much, and otherwise there does not seem to be anything wrong. I have two varieties and the affected chicks are all the same kind. I grease the eyes with vaseline and get the lids open, then the chick eats all right. They are apparently in good health. Next morning I have to treat them again. None of the rest are affected. Eyes only look about half open. Charles City, Iowa. G. H.

A.—Trouble is ophthalmia. May be result of hereditary predisposition. May be due to malformed eyes (a not infrequent occurrence in incubator chicks). Usually bathing the eyes with warm water, followed by dropping a few drops of a 5 per cent solution of protargol in the eyes, gives satisfactory results. In case of malformation of eyelids, where one corner is grown together and will not open, nicking the lid at affected point with blunt pointed scissors will be followed by improvement.

**Inbreeding.**

Q.—Is it correct breeding to mate brother and sister? I want to mate a cockerel and seven pullets from a sitting of eggs secured from one of the most prominent breeders in this coun-

# French's Poultry Mustard

The Original Poultry Mustard—Absolutely Pure—Patent Applied For

## For the Moulting Season

Its superior qualities and benefits are most noticeable, "Use it freely during the moult." Rapid moulting like rapid growth are both essential for best results. Use it now.

### Old and Young Thrive on It

Experiments here and in England have proven its value. It is used and recommended by thousands of poultrymen. It is not the amount of food a hen eats, but the nutriment, she extracts from food by the digestive process that supplies all natures demands and produces eggs.

### BEWARE OF IMITATIONS

#### Insist on Having French's Poultry Mustard

Sold in Sealed Packages Only

French's Poultry Mustard is a scientifically manufactured article containing the flours of different mustard seeds so blended to produce the greatest strength in the volatile principle that is desired, and is required to produce the fortunate results arrived at by the users. We regret there are imitations and inferior brands offered so see to it and accept only "FRENCH'S."

A teaspoonful to six to twelve fowls fed daily in dry or wet mash. Booklet for the asking.

#### Used Exclusively by the President of the A. P. A.

Amenia, N. Y., July 10, 1913.

The R. T. French Company, Rochester, N. Y.

Gentlemen:—French's Poultry Mustard has given me most satisfactory results, have used it two years through the moulting season and am pleased with its value as a stimulant during this period and an aid in rapid moulting, restorer of energy and an assurance of greater egg production. I fully believe there is nothing just as good as "French's Poultry Mustard" for fine birds and greatest possible results. The "Ringlets" are better than ever.

Yours very truly, E. B. Thompson.

French's Poultry Mustard is sold by dealers everywhere. If your dealer does not handle it, send us his name and we will fill your order direct. French's Poultry Mustard is sold at 20 cents per pound in six and ten-pound boxes and 25 pound kegs. Sample package, 1½ pounds, 35 cents.

The R. T. French Company, Dept. A, Rochester, New York

try. I am endeavoring to improve my stock each year and I don't want to make a mistake. If it is all right to mate brother and sister, how must I mate them next season?

I have three cockerels from the setting of eggs referred to and expect to select the best for the best pen No. 1. Then I expect to mate one of these cockerels to about a dozen pullets selected from seventy I have raised this year. There being no blood relation here, I suppose this pen No. 2 mating will be all right.

S. O. I.  
Charleston, S. C.

A.—If your birds are all good, sound, healthy specimens you might mate them successfully as you propose and not observe any harmful results. It is frequently done. You are not at all certain that these birds are full brothers and sisters, in all probability. In case they happen to be so closely related, and in event of their having similar faults, you are very likely to get an exaggeration of the faults in their offspring. If we had the flock you have, we would not mate the brothers and sisters, for we do not approve of close inbreeding, even when we fail to see the resulting harm in some given case. We would much prefer to take the best cockerels and select for them mates among your best pullets out of the unrelated flock of 70. Would also select the very best cockerel of your own raising to mate with the seven pullets. If the results are excellent you may wish to continue the same matings for another season. Should you wish to split the flocks up into all new matings you will have an abundance of remotely related blood to select from and you can also make up a pen with birds grown from eggs bought from other good yards.

A good many ardent advocates of close inbreeding go outside their own

strains for new blood more frequently than is supposed. There also is abundant reason to believe that the evil attending the crossing of different strains of the same variety has been a good deal exaggerated. The man who will persistently and consistently follow selective breeding through carefully conducted outcrossing will, we believe, hold size, vigor, health and productivity. There is ample evidence, for those who are willing to see it, that continued close inbreeding results in lessened production, smaller eggs, poor fertility and a greatly reduced disease resisting power.

We know of a certain strain of winners in an American class that a little more than a dozen years ago was very well and favorably known. In an endeavor to hold show type in the majority of the progeny, generation after generation was closely inbred. Today that strain is only a memory. It has ceased to exist. Loss of disease resisting power was the first noticeable trouble in this strain. Tuberculosis and cancer attacked it. The birds raised began each season to lose a little in size. Egg production fell off and the eggs came smaller in size. Each year the number of chicks dead in the shell increased and the chicks were more difficult to rear. Finally certain matings proved absolutely sterile and the owner became disgusted and turned his attention to other things. We doubt if the most ardent advocate of in-and-inbreeding can demonstrate that such practice has ever promoted health, increased size, helped productivity, or done anything more than to help fix certain "beauty" family characteristics. It is easy to demonstrate the beneficial effects of an out-cross, as they are usually immediate and pronounced, if good judgment has been used in the mating. There will probably be a small loss in percentage of

good type and color, but isn't it worth the price?

#### Killing Sick Fowls.

Q.—Why do you so frequently advise killing sick fowls? Why not treat them as you would human beings when sick—or perhaps that is your idea?

Portland, Me.

Subscriber.

A.—While animals frequently respond to treatment in sickness similar to that given human beings, we fail to see why you wish to couple the treatment of sick persons and sick animals just for sake of argument. You would kill and eat a healthy animal, would you not, if you wanted it for food—but would you resort to cannibalism?

Unless a fowl is quite valuable it is usually a waste of time and money to doctor it, except for very simple easily cured ailments. A sick fowl, that is, a very sick fowl, seldom makes a really good recovery and a very sick chick almost never recovers. It saves time and money for the owner and generally much misery and suffering for the bird to kill the bird bloodlessly when it is found to be very sick, and to then cremate the carcass. By so doing the danger of infection of the other members of the flock is greatly lessened. Usually the ordinary observer does not realize that a fowl or chick is sick until it is very sick and often not until it has progressed so far with the disease as to be incurable or nearly so.

The poultryman who "swats" the sick fowl or chick promptly, instead of spending days and weeks doctoring and doping and establishing a poultry hospital, is usually the most successful man. He has more time to give to the well ones and more money, because he will not waste it fussing with doctoring very sick birds.

Sometimes, when simple, easily cured ailments attack a flock and are prompt-

## Byers' Strain Orpingtons

**BUFF, BLACK AND PEARL WHITE**—It is not possible for one breeder to own all the best birds, but it is possible for him to give the best values and service when he has an established and reliable strain on a par with the best possible and in sufficient numbers to warrant the sale of the best without handicap to himself. I occupy this position in the matter of

#### SERVICE TO YOU

And I propose to maintain it, because upon your perfect satisfaction depends my success. This is a straightforward proposition directed to all conservative and careful prospective purchasers of Orpingtons. Catalogue and special Fall sale list free. Communicate with me regarding an advance order for show birds to win next Fall or Winter, to be delivered when wanted in perfect condition and training. A small deposit will insure reservation. Early purchasers will secure my best values selected from hundreds of the finest birds I have ever owned. I have as many high grade sale birds as the other fellow. So it's all a matter of service to you that counts in the consideration of this or any other ad. I know my standard of service is not excelled by any breeder in the land and your patronage is solicited in view of this reliable assurance.

**C. S. Byers, Orpington Specialist 15 Years, Hazelrigg, Indiana**

## Myers' Exhibition Barred Rock Females

MADISON SQUARE GARDEN, N. Y., WINNERS 1912-13—EXHIBITION FEMALES MY SPECIALTY—PULLET BRED MALES FROM N. Y. WINNING FEMALES

At the late great Madison Square Garden, N. Y., Show, my birds shown by myself won first hen, second pullet and shape special female. This year birds of my breeding also won at Philadelphia, Hagerstown, etc. They have been winning for years and are better today than than ever. **FOR SALE**—Early hatched pullets and pullet bred cockerels fit to win the early shows. I have an unusually large and fine lot of these early hatched birds of the best of New York winning blood that have the quality in form and barring. Let me price your wants. My breeding cockerels are of highest quality, strong and vigorous. They will please, absolute satisfaction to all. Write me.

**C. N. Myers : Box A : Hanover, Pennsylvania**

ly recognized, a little commonsense attention and easily applied treatment gives prompt relief and satisfactory results. Such treatment is always good practice. We don't believe in swatting every sick bird, but we very much doubt the wisdom of dosing and doping or doctoring in a good many cases. It takes a little horse sense to know when to treat and when to swat. Bear in mind, too, that generally the fowl is not worth over \$2, if well and healthy, that sick its market value is really nothing, and also that it does not take long to spend \$5 worth of time and medicine fussing with a sick specimen. Sometimes the so-called "cured" specimen is ever afterward unfit for breeding and it may not be very good to look at. The question to ask yourself is, is it worth the cost?

As to further response to your little dig concerning human beings, we don't believe in killing human beings at all. The factories and the railroads are gradually acquiring a monopoly of that sort of thing and are rather overdoing it. But does it occur to you that there are many cases of record in history where a useful, valuable life and great mind had to go through "this vale of tears" in a diseased body? Do you know of any great value or benefit to mankind to be secured through keeping life in the carcass of a diseased fowl? Scientists now state that maudlin sentiment concerning the lower animals is a manifestation of a disease of the mind. How about it?

In killing sick fowls, don't use a knife or axe. Let the killing be bloodless, for in scattering the blood of a diseased bird you are liable to scatter the seed of infection. Either kill by dislocating the neck or by a sharp blow

with a wooden "billy." Then do not fail to burn the carcass. If you perform a post mortem, use newspapers to cover the operating table and burn every scrap, blood and all, after the operation is over. You can not be too careful in this regard.

#### Egg Yield.

Q. I am a great lover of chickens and have got into the business at last, though not very strong yet. Have started with Anconas and they look good to me. I read A. P. J. every month and it is a great help to beginners. Can you tell me how many eggs a fowl will lay in its lifetime? A friend told me that no matter what kind of chicken it could not lay more than 286 eggs in a lifetime and he claimed he got that report from Washington, D. C.

T. W.

Minneapolis, Minn.

A. Your friend is mistaken. There is a White Plymouth Rock hen of record that produced 281 eggs in one year at the Missouri Experiment Station in the National Laying Contest. A Barred Rock at Guelph, Canada, made a record of 282 eggs in twelve months. They did not stop laying after making the record. There are a good many breeders who should be able to produce authentic records of individual hens for two or three laying seasons showing 400, 500 or more eggs produced by an individual in that period. There is a published record of a Leghorn hen that in seven years laid a total of 969 eggs. A Braekel hen is reported as laying 606 eggs in four years. The lifetime of a hen depends a good deal upon the purpose for which she is kept. If for fancy purposes she may be kept as long as she will produce hatchable eggs.

If for market she will generally not be kept for more than two or at most three laying seasons. Usually the first year of laying is the best and the decrease each season in productivity is considerable. While it is probable that comparatively few hens actually produce more than 400 eggs in a lifetime as they are allowed to live it, there are records of Brahmas, Cochins, Plymouth Rocks and some smaller varieties which go beyond the 400 egg mark. Actual count of seed eggs in ovaries made at Maine Experiment Station show that the number of seed eggs ranges from 586 to 3,605 per hen, though a very large percentage of these never develop. Notwithstanding the records it is well to remember that it is a good hen that lays 12 dozen eggs or more in a year and if she equals or betters this performance her second season she is a very good and profitable hen.

#### Age of Reds for Breeders.

Q. (1) At what age can a Rhode Island Red male be used with success as a breeder?

A. (1) When fully matured, which is usually when one year old. Sometimes specimens 10 months old are sufficiently matured to breed well. Would not care to use a male over 4 years old, even if very good, and would give the preference to one and two year old breeding males.

Q. (2) Is line breeding in small flocks profitable for egg production? Attica, N. Y.

E. E. P.

A. (2) Line breeding as it is generally accepted is carefully systematized inbreeding for the fixing of certain fancy points. If you want eggs and an abundance of them, don't inbreed.

MONROE, NEW YORK

## GREAT COLISEUM POULTRY SHOW

AT CHICAGO, ILLINOIS

Fifth Annual Exhibition--December 12, 13, 14, 15, 16, 1913

Our Past Record--Four of the most successful shows ever held in America. Our Aim--The world's greatest poultry exhibition. We have paid more premiums and put on more real down-to-the-minute features than any other show in America or abroad. We lead, others follow. If a feature is good, you will always find us first to introduce it. Nearly every act of the Coliseum show has been followed by other successful exhibitions. Look for our 1913 list; it surpasses all the rest. No Risk, No Chances, Everything Guaranteed--We, the undersigned stockholders, pledge ourselves, individually and collectively, to pay every premium offered by us that is won by the exhibitors: Ernest Kellerstrass, Reese V. Hicks, E. E. Richards, Frank Hare, Geo. H. Rudy, Jas. W. Bell, A. and E. Tarbox, D. M. Palmer, J. C. Dinsmore, H. C. Dippel, C. S. Byers, Chas. G. Pape, A. E. Martz, Wm. A. Stolls, C. C. Coulter, Wm. A. Sibley, Theo. Hewes. Premium list Nov. 1st. Entries close Nov. 25. Your name on a card addressed to the secretary will guarantee that list will be mailed on time.

Theo. Hewes, Secretary

Indianapolis, Indiana

**Andrews' White Wyandottes.**

J. W. Andrews, of Dighton, Mass., has raised an exceptional fine lot of chicks this year and they already begin to show quality, which will help to keep up the reputation of Andrews' White Wyandottes as one of the greatest winning strains ever produced. Mr. Andrews has bred and shown White Wyandottes now for nearly 20 years and the record he has established at Boston, of having shown there every year for past 16 years, and winning first pens six times out of last seven times exhibited and having first and second cockerel three years in succession is a record no other breeder of White Wyandottes ever equaled.

Mr. Andrews is in fine condition to take care of his customers this coming season in both show and breeding birds. Those desiring show birds for the coming shows will do well to book orders early, as he will not sell two parties to compete against each other in same class at one show. His years of experience in breeding, judging and exhibiting will prove of great value to his customers.

**C. N. Myers, Hanover, Pa.**

We just have a little reminder from Mr. Myers that brings back to memory our visit to his home and poultry plant last spring. As is well known Mr. Myers exhibited but a few of his birds at the last M. S. Garden New York show, as he says, just to see how strong they were. Well, the results proved them strong, for he won first hen, second pullet and female shape special. This splendid showing aroused our curiosity and we were quick to accept his invitation to call.

At his home place we found a modern plant all devoted to the breeding of exhibition Barred Plymouth Rock females, and in his pens a general high average of birds that greatly pleased us. At the time we mentioned his matings and now in his letter we find the expected news that he has a large and grand flock of promising birds.

Mr. Myers is a careful breeder who studies results and his success is his own due. He has succeeded in breeding a line of value, for they have the breeding quality bred right in them which assures them reliable.

He has a great many early hatched birds and is offering for sale pullets and pullet bred cockerels fit to win the early shows. We have every confidence in Mr. Myers and in his birds. Write him your wants and mention A. P. J. H. P. Schwab.

A visit to the Iowa Farm's Poultry Department at Davenport, Iowa, finds their orchard range covered with youngsters from six to two months old. We see in each group the true Orpington type, with big bone, short leg, full deep breast, low spread tail, wonderful combs and eyes. Cockerels almost up to Standard weight and pullets looking like hens, some of the latter already laying. In the laying and breeding houses and yards the females are well advanced in their moult; many of them will be in excellent plumage for the early shows. We find here many fine specimens of the White Orpington hen of one and two years old. In the male paddocks, well shaded, are forty to fifty cocks, resting during the hot summer season. Viewing these cocks and hens, winners at last season's shows and unshown birds equally qualified to wear ribbons, we were not surprised at the numbers of grand typical Orpington youngsters found on the range. Dr. Bryant Smith, the manager, informs us that they have for sale at very reasonable prices a hundred or more breeders and they can mate some wonderful pens of any number of birds. They can supply superb cockerels and pullets for breeding and exhibition purposes. Each youngster is banded and marked so that blood lines can be maintained and proper matings selected. A visit to the Iowa Farms will well repay the fancier of pure blooded poultry, cattle and pigs.

**Start with a 1200**

Poultrymen who are planning on increasing their plants naturally thing of installing a mammoth incubator.

The man who has one or two small machines may not want to install at first many times his present capacity, and the 1200 exactly meets his requirements.

This is an unusually popular size in the Candee line, hundreds being successfully used throughout the United States and Canada.

The Candee 1200 has four 300-egg compartments, each of which is operated separately like four small machines, except that one coal-burning heater takes the place of the four oil lamps.

The Candee is the only mammoth in which the egg trays are stationary like the small lamp machines. This is because the Candee alone has automatic regulation of the egg chamber heat. That is why it is so successful in Florida and other southern states, as well as the colder sections. These automatic regulators do the work of the hand regulating devices on other mammoths.

The 1200 comes in two crates, already built, and is set up and ready to run in a day. More sections can be added any time and in equally quick time.

The Candee Incubator & Brooder Co., Dept. 2, Eastwood, N. Y., have issued a special booklet on the 1200 which will be sent free upon request and it is worth writing for.

**Aldrich White Orpingtons, Columbus, Ohio.**

We were pleased to meet Mr. Aldrich at the convention, as at the time of our visit to his farm last spring he was away from home. Our former article was devoted to his stock and matings, and at this time we were glad to visit with him and to get the results we so confidently predicted.

Mr. Aldrich assured us that the results of their breeding were most satisfactory, that they now had fully matured young birds and were better than ever before prepared to supply winners and breeders to those wishing them. With a large stock they have revised their prices and assure

satisfaction to every one. Their young were all hatched and raised with hens, which to our mind assures the best.

Later we again hope to visit this farm, for we are again anxious to see this line and with our own eyes note the results attained.—H. P. Schwab.

**What Is a Complete Portable Potter Poultry House?**

Potter portable poultry houses are complete to the last detail. They are made of No. 1 high-grade, clear, red cypress lumber and the construction is as perfect as good material and good workmanship can produce in a factory such as Potter & Co. operate.

The many points of merit of a perfectly built, completely equipped and sanitary poultry house are shown in the illustration above, but to readily appreciate such a house, its convenience, complete and sanitary equipment, perfect construction, etc., you must have it in use.

When you buy a poultry house of this kind you save 90 per cent of the cost of labor because all parts and sections are completely made. All that is required to erect such a house is a hammer, wrench and screw driver. You get better material because all defects are cut out of material before the house sections are constructed.

Any poultry keeper needing additional house room for his birds this fall should investigate the merits of the Potter portable poultry houses and equipment. Potter & Co. have been manufacturing these goods

over twelve years and thousands of poultry keepers are numbered among their satisfied customers. Refer to their ad in this paper and write them asking for their 132-page complete catalog, and send 4 cents in stamps to cover postage. The correct address of Potter & Co. is Box E 21, Downers Grove, Ill.

### Miss Carey, Toynnton, Spilsby, England.

Miss Carey is paying America her second visit and exhibiting a line of her Orpingtons, Campines, Paverolles, Bantams and dogs at the International Exposition at Atlantic City, and attending the A. P. A. Convention. This little lady, with her skill in breeding and writing, has become well known to our breeders and we would wish that all could meet her as we did here among her stock. She is very interesting indeed.

Here she was showing a young pen of Buff Orpingtons that by their exquisite quality attracted special attention. We handled this pen, the sound golden-buff, with size and shape, were all we could desire. Campines were also seen to advantage, and after their long trip across the Atlantic were in rare condition.

Miss Carey assured us of her ability to supply not only all varieties of poultry and Bantams, but also of rare-bred English dogs, and we would advise our readers having wants to address her.—H. P. Schwab.

Mr. O. F. Mittendorf, Lincoln, Ill., the Bred-to-Lay Barred Plymouth Rock specialist, informs us he has had a very satisfactory season both in the sale of stock and eggs—in fact, the demand for breeders after the egg season was over was so heavy that he has sold all the surplus to spare. How-

ever, in young stock he has to offer for sale about 500 head of February, March and April hatch stock from his heavy laying strain. That the world at large is awakening to the importance of heavy egg-producing stock is evidenced by the fact that Mr. Mittendorf has sold to a customer in Sydney, N. S. W., Australia, a lot of seven adult Bred-to-Lay Barred Plymouth Rocks. This shipment went by way of Vancouver, B. C., and sailed on the ship Makura on August 6 and due in Sydney August 30. We congratulate Mr. Mittendorf on his growing business.

### Death of J. Merton Taylor.

The death of J. Merton Taylor, president of the Taylor Instrument Companies of Rochester, N. Y., occurred at 1:30 o'clock on the morning of July 31, at the Rochester General Hospital, following a short illness.

Mr. Taylor had attended the annual outing of the salesforce of this company on Wednesday, the 22nd of July, and appeared to be in the best of health and spirits on that occasion. The following Thursday, however, he was taken ill, and removed to the Rochester General Hospital for an operation. Complications set in, and death was caused from stoppage of the gall duct.

Mr. Taylor was born in Rochester 57 years ago, and was the son of the late George Taylor, founder of the Taylor Instrument Companies, manufacturers of thermometers, barometers and other scientific instruments. Mr. Taylor became president of the Taylor Instrument Companies in 1910, and was an example of the highest type of business man, and as such was respected and held in highest esteem in the business world.

He was a man of sterling character, of modest and retiring disposition, a liberal

but unostentatious contributor to charity, and a man of strong friendships. His death is a distinct loss to the city of Rochester, and not only to the immediate business with which he was associated as an officer, but to the field of scientific instrument making at large.

Owing to the suddenness of his passing away it was a great shock, not only to his family and intimate friends, but to his employees and a large circle of business associates and friends. Besides his wife, Mrs. Mary Smith Taylor, he leaves two daughters, one brother and two sisters. Out of respect to Mr. Taylor the Taylor Instrument Companies' plant was closed from Thursday morning, when announcement of his death was made public, until the following Monday. The funeral was held on Saturday afternoon, August 2.

At a meeting of the board of directors of the Taylor Instrument Companies, held August 1, 1913, the following resolution was adopted:

"In sadness we have gathered today to take action upon the death of our president, Mr. J. Merton Taylor, who has been taken from his activities with a suddenness that challenges our belief.

"It seems almost impossible to believe that this great personality that for so many years had planned and administered the affairs of this corporation with a strength that seemed unlimited, has been cut down while so many of his allotted years were yet before him, while his life was so useful to so many, while his co-operation and guidance were so necessary to us.

"It is no disparagement of his business associates to say that his was the master mind, that his conclusions were the final word in all our deliberations.

"Strong in candor, patient in deliberation, just in purpose and unselfish in conclusion, he was an example and an inspiration to us all.

"His business sense was instinctive, his judgment remarkably unerring, and he believed that commercial dealings should be controlled by the same rule of common honesty that should govern private action.

"He could see no success worth striving for that did not include benefits to all connected with the enterprise, and at every meeting of this board his presence was a guaranty that the advantage of the employees would be carefully considered in any discussion of business policies.

"The employees were to him fellow-workers in a common purpose, and to them he was indeed the big brother. They came to him with their cares and he listened with sympathy and responded practically.

"To him every employee of the company was a man and a brother, whether he worked in the office, at the bench or on the road. His death is a great loss to us all.

"Our hope now is that we may carry on the work of this company in accord with his high purpose.

"As a business associate, we were wrapped up in him, his character we admired, his manhood we loved, and those who knew him best loved him most."

### A Great Win in Buff Orpingtons.

The classes were large and the competition very keen at the Greater New York Show just held, August 6, 1913. Particularly was this true of the Buff Orpington class, in which variety Mr. I. Brooks Clarke, Department C, Newark, N. J., had a cockerel and pullet placed.

Mr. Clarke's birds were remarkable for size, the cockerel weighing 7½ pounds and the pullet 6 pounds. Mr. Clarke informs us he has a lot of these large, early batched cockerels and pullets having size, type and color, and that he is prepared to furnish winners for any show at very reasonable prices. Look up his ad elsewhere in this issue.

### Poultry Judging Course.

The Hewes-Pierce School of Poultry Judging, that has turned out a number of the best judges in the United States today, will hold its regular course at Springfield, Ill., during the week of the State Fair. The birds on exhibition will be used as models and full instruction will be given on all breeds and varieties. The long experience in the show room that these two experts have had, makes their instruction of value to the beginner, and they have the proud distinction of never yet having turned

### Among the Breeders.

Ira C. Keller, proprietor of Brookside Stock Farms, Prospect, Ohio, is offering a large number of choice Golden and Silver Wyandottes at about half their actual value. These birds were used in his matings the past season, and among them are many of his winners. He is making this sacrifice sale in order to have room for his young stock. He has been fortunate this season in raising a large number over former years and is therefore in good shape to take care of his trade for birds for early fall and winter shows. He also reports having raised a grand lot of Seabright Bantams this season. Look up his ad in this issue and write him for full particulars.

J. L. Brown, proprietor Canada's White Rock Farm, Seaforth, Ont., Can., raised all this season's chicks with hens, on free range, in a forest of 25 acres, and believes that chicks raised in this way are, without doubt, the best that can be raised, and he informs us that his chicks this season are far ahead of even his fondest hopes, and he is now in a position to supply birds for either exhibition or breeding purposes. Write him for full particulars and mention American Poultry Journal.

F. E. Skinner, Sandwich, Ill., breeder of White Wyandottes, reports that he has about 150 young birds of the very grandest quality, being low down, blocky type and absolutely snow-white. He also has a number of one-year-old cock birds that are fit to compete in fast company and get inside of the winnings. Among them are 1-2-4 cockerels at Aurora, Ill., January, 1913, and the grand bird that headed the second pen at Indianapolis, January, 1913. He also has about 50 one-year-old hens, mostly birds that have been in his breeding pens the past season. True Wyandotte type and snow-white. These will be sold at reasonable prices. Write him for particulars and mention American Poultry Journal.

Chas. Nixon, Washington, N. J., the well known White Wyandotte breeder, is in better shape than ever before to furnish birds that will win the blue. For the past twenty years Mr. Nixon has devoted his time in improving and breeding White Wyandottes of standard type, and he has in the past produced birds that have won at New York, Philadelphia, Boston and other shows of like character. He has been a continuous advertiser in American Poultry Journal for the past fifteen years, and during that time has given entire satisfaction to all those with whom he has transacted business, and he has sold stock and eggs to a great many subscribers of American Poultry Journal, who have thus been enabled to win prizes with his strain at the leading shows in the country. He is a man that does not believe in standing still and is therefore constantly working to improve his stock, and in a recent conversation informed us that his stock this season is better than ever before. Any one who is looking for something that will improve his stock, or win prizes for him, should communicate with Mr. Nixon.

J. S. Frazier, Advance, Ind., the well known breeder of S. C. Buff Orpingtons, informs us that he has nearly 1,000 youngsters hatched from his prize winners at Indianapolis, Springfield and Louisville in 1912 and 1913. He has many January hatched chicks that are now up to standard weight and is looking forward to a very prosperous trade for the fall and winter shows. Mr. Frazier has been breeding Buffs exclusively for thirteen years. His stock has free range on a 120-acre farm, therefore are healthy and of the proper size. He has 100 yearling hens and 15 cocks for sale from his selected breeders the past season. These he is offering at remarkably low prices to make room for his younger stock.

C. A. Keefer, Muskegon, Mich., breeder of Buff and White Orpingtons and Silver Campines, informs us that both his yearlings and youngsters are coming along in fine

shape. He did not raise as many chicks this season as usual, but what he did raise are top-notchers. He will have some grand show specimens of both Buff and White Orpingtons for the season's trade. In Silver Campines he has some crackjacks that will be heard from later on.

Fred A. Andrews, proprietor of High-worth Poultry Yards, London, Ont., Can., writes us as follows: "I have more and better young stock this season than ever before, in my two varieties, White Orpingtons and White Rocks. A few pens for sale of last year's breeders, in both varieties, five birds in each, one male and five females. These are great bargains. Early young stock for the best shows ready now. I had 1913 hatched pullets laying on June 11. Strictly high-class pullets and cockerels at reasonable prices, quality considered. Birds from my yards have won at Madison Square, Chicago, St. Louis, New York State Fair, Detroit, Toronto, also in New Zealand and England. See my winnings at Canadian National Exhibition, Toronto, 1913. In twelve years of business, every customer has been satisfied. This is evidence that my stock is right."

Chas. Nixon, Washington, N. J., the well known judge and breeder of White Wyandottes, in a recent communication, made the following statement: "I am just rounding out my twentieth year in the Wyandotte business, and it has been one of my very best seasons, and a good big majority of the credit must go to the American. It certainly has been a business getter for me."

John S. Martin, Port Dover, Ont., Can., the well known breeder of Regal Strain White Wyandottes, in a recent communication says: "I have over 500 early-hatched cockerels and pullets to select from. They

are the finest I have ever raised. I am in shape to supply first prize winners for any show in America, as most of these chicks are sired by my first prize winning males at Boston and New York State Fair. I have also over one hundred of last year's breeders still for sale and am in a splendid position to take care of any orders that may come." During the past several years Mr. Martin has been a heavy winner at American shows, such as Boston, New York, Buffalo, etc., and for square dealing has established a reputation second to none. Any one desiring show birds or breeding stock that will improve their flock should communicate with Mr. Martin.

Maple Farm of Midlothian, Tinley Park, Ill., make a specialty of White Plymouth Rocks. They have 1,500 White Plymouth Rocks maturing in their cornfields and clover fields that speak volumes for their matings of the past season. Never before have they had such good birds, and if they continue to keep up the high quality of this season's offerings they certainly should feel well satisfied with the results. They have a number of pullets and also a number of exceptionally fine cockerels to offer this fall, any of which are good enough to go into the best flocks of the country. During the month of September, they must close out almost all of their yearling hens and are therefore making very attractive prices to move them quickly. These are not culled in any sense of the word, but are strong utility birds that will do good work for the man that owns them. Write them for full particulars and mention American Poultry Journal.

The Woodview Poultry Yards, London, Ont., Can., breeders of Barred Plymouth Rocks, S. C. Rhode Island Reds, Crystal White Wyandottes and R. C. Black Minor-

## MONMOUTH FARMS S. C. White and Buff Leghorns

MONMOUTH BUFFS have won first prize pen at Madison Square Garden for the past five consecutive years—a record unequalled by any other leghorns. Monmouth Whites took champion cock of show—and 50 other prizes from 60 entries at Atlanta, 1912.

Why waste your time, patience and money on unreliable experiments when you can buy Monmouth Stock at the following prices?

S. C. White yearling hens, \$1.75 each; in hundred lots, \$1.50 each. S. C. White 2 year old hens, \$1.50 each; in hundred lots, \$1.25 each. S. C. Buff 1 and 2 year old hens, \$1.75 to \$2.50 each.

We also have a fine lot of young exhibition stock in perfect condition for early fall fairs. Prices given by mail.

Beautiful catalogue including colored illustrations sent on request.

"The Twentieth Century Dual Purpose Fowl"

J. C. Punderford, Owner  
Monmouth Farms, Thos. Lockwood, Supt. Box 23, Freneau, Mon. Co., N. J.

## WEBSTER FARM MADISON SQUARE GARDEN, N. Y., CHAMPION WHITE PLYMOUTH ROCKS

**BREEDERS NOW FOR SALE** We have a selected lot of choice quality breeders in cocks, cockerels, hens and pullets. Just the kind you want to breed from at extra short season prices. ### Remember This "Champion" Line

Made its records at America's greatest show and last season won at Cleveland, Philadelphia and Williamsport—ten firsts, four seconds, four thirds, twelve specials, etc. "The best record ever made by any line." For they include five specials for best birds in class and at the show.

Webster Farm, Box A, Girard, Pennsylvania

## Lichtenwalter's Quality Buff Ply. Rocks

Winners last season at Madison Square Garden, New York, Springfield, Illinois, (club show) Philadelphia, Cleveland, Williamsport, etc. I am closing out half of my breeders. Mated birds a specialty. Write me your wants. Mention American Poultry Journal when writing.

E. A. Lichtenwalter : Box A : Girard, Pennsylvania

cas, inform us that they recently purchased the entire flock of Partridge Wyandottes of Adams Bros., London, Ont., Can. Among this flock are perhaps some of the best specimens in existence and include the first prize pullet at Madison Square Garden, January, 1912, and 1-2-3 cock, 1-2-4 hen, 2-3 cockerel, 1-3-4 pullet at the Ontario, and many other noted winners. They have about 800 of the finest youngsters they ever raised in B. P. Rocks, White Wyandottes and S. C. Reds, and will be in a position to supply winners for any show in America at reasonable prices. They have already sold birds for several of the large fall shows, and, as inquiries are coming in very rapidly, they have good reason to look forward to a record-breaking trade during the fall and winter months. Write them for further particulars and mention American Poultry Journal.

Lester Tompkins, Concord, Mass., originator of Tompkins strain of Rhode Island Reds, writes as follows: "I have 2,500 youngsters coming on and they look as thrifty as any I ever raised. The quality is certainly way ahead of anything I ever yet produced. Some of them will be ready for showing soon and some will be ready for the fall fairs and others coming along for the later winter shows at all times, as I have them of different ages. I am in a position to supply the trade with the best quality possible to produce."

Webster Farm's White Rocks are better than ever and they are prepared to furnish winners for the early fall and winter shows, in cocks, hens, cockerels and pullets. Write for guaranteed winners to Webster Farm, Girard, Pa.

E. H. Lichtenwalter, Girard, Pa., the well known breeder of Buff Plymouth Rocks, informs us that he has better quality than ever before in this variety and is prepared to furnish birds for the early fall and winter shows in cocks, hens, cockerels and pullets. Write him for guaranteed winners and mention American Poultry Journal.

Ross Swartout, Newport, Ont., Can., the well known breeder of Canada's Champion R. C. Black Minorcas, writes us that he is in splendid shape this season to supply the wants of those who desire something extra good in R. C. Black Minorcas, as he has a

fine lot of cocks, hens, cockerels and pullets now ready for the fall and winter shows. Mr. Swartout has been the leading exhibitor at the Guelph, Ont., Show for the past three seasons, and at the last New York Show he won three out of five firsts, also best display. At Scranton, Pa., January, 1912, at the Club Show, he won four out of five firsts, this being the largest class of Minorcas ever shown. He also received a medal for the best male in the show. This was won by "Perfection," his \$1,000 cock bird. Any one desiring show specimens or breeding stock should get into communication with Mr. Swartout at once.

H. W. Halbach, Waterford, Wis., the well known breeder of White Plymouth Rocks, writes us as follows: "My stock is just splendid. We have had phenomenal results in hatching chicks and when it comes to raising we are miles ahead of any other year. Our chicks show more size, type, pure white plumage and excellent health than any lot we ever had. We are in a position to furnish utility birds that are great layers, show birds to win in any show or breeders that will make good. Just now am offering special, fine utility hens at \$2.00 each. Any one who wants something to fill the egg basket should order at once. It is also time to book show birds so as to be sure to get them." The older readers of American Poultry Journal are well acquainted with Mr. Halbach and his winnings during the past years, but to the newer readers we would state that Mr. Halbach, during the past years, has been a consistent winner at all the large central shows, such as Chicago, Detroit, Springfield, etc. In fact, he generally makes practically a clean sweep wherever he exhibits and any one who has had the pleasure of visiting his farm will confirm us in our statement when we say that Halbach's White Plymouth Rocks are raised under ideal conditions and that Mr. Halbach knows how to produce White Plymouth Rocks that will win, also birds that will lay and pay any one who is fortunate enough to secure some of them. Our readers would do well to take advantage of the bargains he is offering this month. It is like buying gold dollars for 50 cents. Write him and mention American Poultry Journal.

Henrietta E. Hooker, South Hadley, Mass., breeder of Buff and Blue Orpingtons,

reports a fine lot of old hens for sale that are worthy of placing in a show room anywhere, as there are Madison Square, Baltimore and Boston winners among them. She has no cheap stock to dispose of, as all her cheap stock was put on the market and disposed of long ago. She has many promising chicks in both varieties, but these have not as yet put on the finishing touches, but will be there very soon. It would be well to write her for full particulars if you are in the market for any Buff or Blue Orpingtons.

Guy Daily, Jeffersonville, Ind., breeder of White Plymouth Rocks, reports that he has over 1,000 young birds coming on that give promise of being the best he has ever raised. He has pullets that have been hatched since the middle of February, that have been laying since July 10, and cockerels that look almost like old birds. Mr. Daily, during the past two or three years, has made a wonderful record on his White Plymouth Rocks, both at the winter shows and fall fairs. This season he has decided not to exhibit at the fall fairs and is therefore in a position to supply winners for the early shows at prices that the average exhibitor can afford to pay. Write him for particulars, and mention American Poultry Journal.

Charles G. Pape, Ft. Wayne, Ind., the well known breeder of Single-comb Black Minorcas, entered some of his birds at the Greater New York Fair and Exposition, Empire City Park, Yonkers, N. Y., and reports the following winnings: 1-2-3-4 cocks, 2-3-4-5 hens, 1-2-4 cockerels, 1-2-3-4 pullets, also best pen and display. These winnings at this season of the year should readily convince any one that Mr. Pape is in a position to supply show birds that will win in any show in the country. If you are interested in stock that will yield large white eggs and many of them, you should get into communication with Mr. Pape at once. Mr. Pape has been breeding Single-comb Black Minorcas for a great many years and has exhibited his stock at the leading shows in the country, where they always won the lion's share of the prizes. He informs us that he has a large number of choice exhibition and breeding birds this season, and is in a position to supply the wants of the most critical. Write him and mention American Poultry Journal.

## MAPLE FARM WHITE PLYMOUTH ROCKS

TO WIN at the Fall shows you must have the birds that have the quality to put themselves in the outstanding positions. MAPLE FARM OF MIDLOTHIAN has a large number of such birds fit to go in to any show in the country and win the coveted positions.

Write us fully stating the size of the last show, the quality of birds exhibited and give us an approximate idea of what it is worth to win the show. We'll answer the same day telling you frankly whether or not we can help to fulfill your desires.

SEPTEMBER SPECIAL—In order to make room for our pullets we have selected a few yearling utility breeders from our yards. Until disposed of we quote ten of these sterling birds and a Spring cockerel for \$25.00 f. o. b. Midlothian, Illinois. If you cannot come to select your birds, write quick to

**Maple Farm of Midlothian, Box 105, Tinley Park, Illinois**  
CHARLES D. ETINGER, PROPRIETOR      WALTER A. COOK, MANAGER

Mrs. Reginald Stonestreet, proprietor of Park Poultry Yards, Nashville, Tenn., informs us that she has had remarkable success in raising early birds of extremely high quality. She has 400 that will compare with blue ribbon winners of last year. These were culled from 1,600 chicks raised this season. Any one wanting to strengthen their chances for the early shows should surely write her, for she will guarantee them to be in the winning. She is particularly strong on high-class pullets. She also has some cockerels that will make the knowing ones wake up and take notice. She is a breeder of S. C. White Orpingtons a specialty.

Niemann Bros. Mfg. Co., Mt. Olive, Ill., manufacturers of training and exhibition coops, brood, setting and hen houses, fireless brooders, portable hen houses, trap-nests, portable fences and runways, collapsible hen coops, etc., are making arrangements for a big exhibit of their goods at the Illinois State Fair and will demonstrate the use of their coops, etc., with actual fowls in the houses and coops, also chicks in the brooders, and a large display will be made of their collapsible show coops, which show a new feature in this line. They will also exhibit their training coops with the new drawer feature. It would be well for those visiting the fair to take time to examine this display carefully, as such a complete display as this will be has never been seen at any fair or poultry show. The poultry equipment manufactured and sold by this firm has been giving the best of satisfaction during the past several years, which has resulted in the large trade enjoyed by these people. There is probably no other concern in the country that manufactures so complete an outfit for the poultrymen, and their goods are guaranteed to be as represented. Don't fail to see their exhibit at the Illinois State Fair.

Maurice F. Delano, successor to Owen Farms, Vineyard Haven, Mass., reports his first winnings since he became owner of the Owen Farms birds. At the Greater New York Fair he won 20 out of a possible 22 first prizes; all championships, cups and specials offered were awarded his White Orpingtons, White Plymouth Rocks and White Wyandottes. This is without doubt the best record ever made at a national show and in mid-summer. Mr. Delano is in a splendid position to furnish winning birds, either old or young, for any fair or show at any season of the year, and also breeders of the highest class for fancy or for utility purposes. Owen Farms birds have always been heavy winners wherever exhibited, and it is ever Mr. Delano's intention to keep them so. All stock is sold on a guarantee that the birds must please or be returned at his expense and he will cheerfully refund full purchase price. At the present time his flock consists of over 8,000 old and young birds, and he is therefore in a position to furnish just the birds any one desires. Write him today and mention American Poultry Journal.

A. E. Martz, Arcadia, Ind., the well known breeder of S. C. Buff Orpingtons, reports the following winnings at the Greater New York Exposition last month: 1-3 cock, 1 pen, 3-4 hen. Nothing but old birds entered. Mr. Martz's Buff Orpingtons are too well known to the older readers of American Poultry Journal to need any comment from us, but to the new readers we wish to say that the S. C. Buff Orpingtons bred by A. E. Martz of Arcadia, Ind., have been consistent winners at all the leading shows in the Central States for the past several years. Mr. Martz has been an advertiser in our columns for a number of years, during which time he has given nothing but satisfaction to all those who were fortunate enough to do business with him. It has always been his motto to ship fowls a little better than those he described, and by so doing gave his customers more than their money's worth. If you want to win on Buff Orpingtons at the coming shows, you should get into communication with Mr. Martz at once.

J. H. Prudhomme, Thurmont, Md., won five firsts on five entries at the Greater New York Fair and Exposition last month, which included first on Silver Campine cock, cockerel and pullet, and also first on Golden Campine cockerel and pullet. He informs us that he is a little short on domestic birds, but is prepared to take care of all orders with strong, healthful, imported birds in Goldens and Silvers. He says he is receiving a good many inquiries for stock and from present indications there will be a lively business in Campines this fall. Write him for full particulars.

"Bruce Croft," the home of Thoroughbred Orpingtons, Lynbrook, L. I., N. Y., have an

extra lot of attractive birds in Black, White and Buff Orpingtons, and especially in Crystal Whites, more than they have ever had before, and to strengthen the attractiveness of their place they are importing birds from England. One large lot has already been received and two others on the way. They are planning on having imported male birds at the head of all their breeding pens the coming season, or imported females in pens headed by the best males from their own strain this year. They are now disposing of breeding pens good enough for any beginner on earth, at about half the usual price. They are doing this to make room for the imported stock and their growing youngsters. Any one in need of White, Buff or Black Orpingtons should not overlook writing these people.

J. S. Pennington, Plainfield, Ill., breeder of Golden and Buff Wyandottes, informs us that he has about 100 head of one-year-old stock of both varieties that he will dispose of at a reasonable price. He also has 300 head of young stock, many of which are developing into very fine specimens. Mr. Pennington, during the past few years, has made an enviable reputation as a breeder of high-class Golden and Buff Wyandottes, having won many first prizes at the leading shows in the Central States. If you are looking for something in his line that will win at your show, write him for prices and particulars.

Haldie Nicholson, Leominster, Mass., in a recent communication had the following to say: "In Barred Rocks, we have no doubt, the grandest lot we ever owned. We have about 40 yearling cockerels maturing into cocks. Our young stock will be ready for the winter shows, but am afraid we shall have nothing for the early fall shows, as we have had such a demand for eggs the past season that we could get but very few eggs under for ourselves. In Blue Orpingtons the demand and inquiries are greater than ever before. During the past week we sold and booked orders for 27 Blue Orpingtons. We have some Blue cockerels and pullets for the early shows, and also a few matured birds yet for sale, and those who get into the Blue Orpingtons this year will find more business in this breed than any other breed they could get into at the

present time. We shall have in the fall, after they have got through the moult, a few of our best Barred hens, cockerel-bred, for sale. These are all high-grade specimens, and of course the price will be higher."

C. M. Agler, Millbury, Ohio, breeder of S. C. Rhode Island Reds, wrote us recently as follows: "I have the finest bunch of S. C. Red cockerels I have ever seen. Every one who has seen these birds has marveled at their color and shape, and one party has made me an offer of \$100 for the pick of the bunch when they are matured. Every bird I have now is right on his toes and each one looks and acts as though he is the cock-o'-the-walk. These birds will not last long, for we have quite a bunch of Red breeders in this vicinity who are ready to make a grab at them just as soon as they are ready to be disposed of. The early hatched cockerels weigh six pounds now and are getting their adult feathers, and will be ready for the early September fairs."

Gensemer Bros., Creston, Ohio, specialty breeders of Silver and Golden Campines, inform us that they have a fine flock of about 300 head of Campines, about 150 of which are pretty well matured and show exceedingly fine type and markings. They do not care to sell any of the pullets, but will dispose of a number of choice cockerels of both colors. Write them for prices and particulars, and mention American Poultry Journal.

Dr. G. G. Billman, breeder of "Houdans Worth While," now located at Sullivan, Ind., but formerly of Evansville, Ind., informs us that he has raised about twice the number of Houdans this season he has ever raised before, and the quality of the very highest. He states that, barring sickness, death, expense, etc., he expects to be able to give some Houdan breeders a chase for some money in such shows as New York, Chicago, etc., as he is becoming more and more convinced each year that the chicken does not live that equals the Houdan. He has a large number of choice birds now ready for fall and winter shows and will price them right to any one interested.

## Coal-Burning Self-Regulating

Colony Houses are perfectly safe from fire with the Newtown Colony Brooder. 8 cents a day buys sufficient coal for brooding 1,000 to 1,500 chicks in cold weather.

## Newtown Giant Colony Brooder

(Ask your dealer about it)

Fill coal magazine once in 48 hours in the severest weather. In mild weather it requires less frequent attention. Rake ashes once in 24 hours.

Heat automatically regulated by thermostat. Temperature always right. Built in two sizes to accommodate 300 to 1,500 chicks. Heat Deflector need not be raised to coal and shake the fire nor to remove ashes.

Ask your dealer to show you this economical, coal-burning, self-regulating Colony Brooder, or write direct for Colony Brooder Catalog A

**NEWTOWN PRODUCING CO., Newtown, Pa.**

## Own Money Makers--500 Pullets

D. W. Young Strain White Leghorns the kind that will lay large white eggs, choice \$1.50 each others \$1.00, yearling hens 90c. Rhode Island Reds, White Rox and Wyandottes, Indian Runner Ducks. Your chance to get good birds at right prices. Green cut Clover. Baby Chix. Satisfaction guaranteed or your money back.

**CLOVERDALE FARMS CO.**

:-

**RANSOMVILLE, N. Y.**

O. E. Faxon, proprietor of Swastika Poultry Yards, Plano, Ill., informs us that he will make a special price on show birds for this winter's shows on Single-comb White Leghorns and Single-comb White Orpingtons. Mr. Faxon won first cock at the National S. C. White Leghorn Club State Meet, 1913, which shows the quality of the stock he breeds. Write him for further information, and mention American Poultry Journal.

M. C. De Loof, Willoughby, Ohio, breeder of Single-comb Rhode Island Reds, has, without question, the finest flock of young birds he ever raised. The color and black points are ideal and they run fine in length of back and head points. It is strictly quality with Mr. De Loof, rather than quantity, and as his quarters are limited he is offering his yearling stock for sale at a sacrifice, including such birds as his Buffalo and Cleveland winners. He is also in a position to furnish a limited number of choice exhibition birds for the early shows and fairs.—H. H. Coburn.

Cloverdale Farm Company, Ransomville, N. Y., breeders of White Leghorns and Rhode Island Reds, have a great number of choice pullet breeders and cockerels hatched and bred on free range that they are offering at bargain prices. They guarantee satisfaction or money back. Look up their new ad in this issue and write them for prices and particulars, and mention American Poultry Journal.—H. H. Coburn.

Carl D. McCarthy, originator of the beautiful Rhode Island Whites, and owner of beautiful Edgewood, Kempton, Ind., although handicapped the past spring with a severe attack of sciatic rheumatism, managed to raise a fine lot of Rhode Island Whites, the surplus of which are all contracted for. This is proof positive of the great and increasing demand for this variety of fowl. This breed, unlike the majority of new breeds, originated on a commercial poultry plant where eggs was the slogan for all contracts for New York City hotels. The Whites are the result of several years of systematic crosses and were called Rhode Island Whites because of the attractive and racy looking shape of the R. I. Reds. This, with their beautiful, snow-white plumage, makes them a most attractive variety. Mr. McCarthy emphasizes that their most valuable asset is their great utility qualifications. On account of the many out crosses in the beginning they are a very hardy bird and can stand an unlimited amount of forcing without getting leg weakness. Mr. McCarthy still has a few breeders for sale. Write him for prices.—H. H. Coburn.

The Aldrich Single-comb White Orpington Farm, Columbus, Ohio, is well satisfied with the past season's business, they having sold over \$6,000 worth of eggs alone. This popular strain of S. C. White Orpingtons has come not only to stay, but to lead in all parts of the land, wherever shown, and they won this season at Winnipeg and Brandon, Manitoba and Grand Forks, N. D. In fact, every bird sent out this season has won for its purchaser. Mr. E. S. Aldrich writes that, in carefully looking over his entire flock with his manager Mr. Rawnsley, he finds fully 90 per cent with good red eyes, splendid combs and sound lobes and that the size of the bone this year far exceeds that of their last season's stock, and that the color is simply magnificent. There are many cockerels and pullets hatched the middle of February that were up to weight August 1. In shape, especially in length of back, they are ideal. From the very beginning of their interest in the Single-comb White Orpingtons, members of the Aldrich Poultry Farm have spared neither time nor expense to purchase the best birds obtainable, and now have the most noted winners of two continents in their flock. They are backing up their belief in the future possibilities in the Single-comb White Orpingtons as a profitable and popular variety.

and are preparing for a large season's business. It is needless to state that the Aldrich Poultry Farm is one of the finest, and that there is every facility and condition to make this farm the best ever. Write them for prices on show birds.—H. H. Coburn.

Henry F. Alberding's Silver Spangled Hamburgs and Single-comb Buff Orpingtons are improving year by year in quality under his care and management. His Buffs are Owen Farm's strain direct and are wonderfully even in golden buff. He has a few classy show birds to sell at most reasonable prices. His Silver Spangled Hamburgs are the most beautiful he ever raised. Mr. Alberding expects to be at the Indiana State Fair with a nice string of birds. Write him for prices.—H. H. Coburn.

F. S. Smith, Hamilton, Ohio, the noted breeder of Single-comb Buff Leghorns, has again succeeded in producing a large number of very choice specimens this season, even though the floods last spring did him a lot of damage and put a crimp in his plans. It will be remembered that Mr. Smith lets all the farmers within a radius of ten miles of Hamilton raise chicks for him and it is needless to say that his Buff Leghorns are the huskiest of the husky. He has any number of them ready for the fairs and southern shows. Write him for prices.—H. H. Coburn.

J. C. Fishel & Son, Hope, Ind., breeders of the World's Best White Wyandottes, have practically outdone themselves with their past season's business and the quality of their young stock. They personally conduct their own business and are on the job all the time, which is the main reason for their great success. Fisheldotte is one of the beauty spots of the Middle West and the young Wyandottes have every condition to make them all that has and ever can be expected of the breed. The Fisheldotte White Wyandottes have won in every spot and place on this continent as well as in many foreign countries. With J. C. and Charlie at the helm, it is quite unnecessary to say that there is not a poor bird on the farm, and that their young stock runs so even in superior quality and so perfect in shape, and so snow-white, that a prettier sight could not be imagined. This farm reports an excellent business and with every prospect for a world beater the coming season. To make room for the hundreds of youngsters, they are offering a "shower" list in which is quoted some rare bargains, and every prospective buyer of show birds or grand breeders should possess one of these lists and avail himself of this unexcelled and grand opportunity. Their catalogue is a book which possesses much valuable information and shows up Fisheldotte true to life. It is a great satisfaction to a customer to know he will be treated right and J. C. Fishel and Son are the soul of honor in all their business transactions, and will always give you the best end of the bargain. Write today for their "shower" list.—H. H. Coburn.

The Miller Anchor Company, Norwalk, Ohio, inventors and manufacturers of the "Ideal" Feeder and Exerciser, have made some very marked and practical improvements on grain as well as dry mash feeders, having put a cast-iron bottom on them, which not only looks much better, but ships much safer and is more practical in every possible way. The Ideals have made possible the "busy hen," the hen that lays, and "the hen that lays is the hen that pays." These feeders are sparrow and rain proof and are the greatest economizers yet on the market. The price is reasonable and agents are wanted in every corner where a dozen hens are kept. Write for circular.—H. H. Coburn.

R. N. Barnum, proprietor of Foxhurst Farm, Lime Rock, Conn., writes us as follows: "We have had a very successful season and as Mr. Hubbard mated the pens

the moment we got back from New York, we have some wonderful April hatched birds, that are going to be fully matured for the early shows and fairs. We have raised three times as many birds as we have ever raised before, increased our plant, and Mr. Hubbard reports that the birds are by far better than anything we have ever raised, which fact we hope to demonstrate at Madison Square Garden the coming winter. As noted in our advertisement recently we do not claim to be importers, as nearly every other large breeder of Orpingtons is. We have raised and bred practically every winner that we have had. Mr. Hubbard has had but one Sunday off or away from our chickens in the past year, with the result that they are uniformly grown by his own methods, are all mammoth, beautifully colored birds, hatched in April, May and June, every one of which will be fully matured and grown, ready for December 15 show, which are in addition to the few March and April early show birds that we have mentioned above. It is through Mr. Hubbard's painstaking and line breeding and constant attention that put Foxhurst Farm Black Orpingtons where they are. It is no wonder, therefore, that we are astonished from month to month to read of the different managers of the farms who are our chief competitors being in England picking up strings of birds for the fall and winter shows. We believe that the American Black Orpington fanciers will some day agree with us that the American line bred, American type Black Orpington will prevail and that the fashion of buying imported birds as against the American bred has about had its day. Every bird that Foxhurst Farm won with last winter and made a world's record at Madison Square Garden was bred and raised on our farm, beating the best that could be imported from England, regardless of price. Our birds were not hatched prior to the 20th of May and we were in competition with January hatched, imported stock

Cloverdale Farm Company, Ransomville, N. Y., are offering choice, selected, green cut clover for sale at prices not much higher than common alfalfa. It is much better for poultry, producing a much desired flavor when mixed with mash. It is cut one-eighth inch in length, properly cured and selected for purpose intended. Cut clover is recognized by the poultry breeders throughout the country as one of the very best foods both for growing stock and laying hens. Write for prices, and mention American Poultry Journal.

### The New Chicago Show.

Chicago is to have two shows this coming winter. One is the show held in the Coliseum, December 12-17, 1913, of which Theo. Hewes is secretary, and the other will be held under the auspices of the Chicago Poultry Breeders' Association, January 5-11, 1914. This organization has recently been incorporated as a stock company for \$1000.00 and is composed entirely of poultry breeders in and around Chicago. At the present writing there are close to 200 members in the association and it is growing rapidly.

The officers of the Chicago Poultry Breeders' Association are: F. A. Kaup, president; A. E. Lee, vice-president; A. E. Lemieux, secretary, and J. L. Deaver, treasurer.

The judges selected are F. H. Shellabarger, Iowa; Earl Hemingway, Michigan; Joseph Coleman, Ohio, and Judge Hays of Illinois. Judging by comparison.

The Chicago Poultry Breeders' Association is a member of the American Poultry Association, and will try to secure the medals, etc., offered by the latter association to one show in each state, otherwise known as the State A. P. A. Show. The prize ribbons will be the beautiful silk woven American Poultry Association ribbons and between 75 and 100 silver cups valued at up to \$50 each will be offered in addition to about \$1500.00 that will be offered in cash prizes.

The show will be held January 5th to 11th, 1914, in the large East End Hall, at Erie and Clark streets, which is within four blocks of the downtown district and very convenient to everybody.

Entree fees are \$1.00 for each single bird and \$3.00 for pens with separate classes for old and young pens in solid colored varieties. Nothing but poultry, bantams, turkeys, ducks and geese will be shown.

Premium lists will be ready November 1 and a copy can be obtained by addressing the secretary, Arthur E. Lemieux, 4539 North Eberly avenue, Chicago, Ill.

F. A. KAUP,  
President Chicago Poultry Breeders' Association.

## Smith's Single Comb Buff Leghorns

For sale by the hundred. Best Strain, Best Breed to lay large white eggs.  
Show Birds and Show Birds that can and will win in any competition.

F. S. SMITH

HAMILTON, OHIO

# CLASSIFIED ADS

**UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and five cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

A sure home run on back inside cover

**LEG BANDS**  
Get Samples Free

Which hens are laying? Mark 'em with leg bands and you'll know. Sell the non-producers. Two and three year old hens are a dead loss for laying purposes. Leg bands tell you when to sell off surplus stock. Invest a few cents in leg bands; you'll get dollars in egg profits.

**Get Guaranteed Leg Bands for Your Hens**

Order now direct—money back if not satisfied. Smith Sealed. Prices: 12, 30c; 25, 50c; 60, \$1.00; 100, \$1.50; 500, \$6.50; 1,000, \$12.50; postpaid. Leader Adjustable. ## The Simplex Brooder Stove Is an Unqualified Success

Thousands of stoves in the hands of successful breeders everywhere prove that the Simplex System is not only practical but positively is the only successful way to raise chicks. It not only saves labor and money, but actually raises chicks. It makes the wonderful profits of the poultry industry a possibility—not a dream. Wake up and get the profits. Now is the time to get your brooder house ready. You can do the work. We will show you how. Nothing complicated about it. Our catalogue tells about raising chicks around a brooder stove without hovers. We send it free with testimonials from customers in all parts of U. S. and Canada. Simplex Brooder Stove Co., 208-4th St., Grand Rapids, Mich.

## ANNOUNCEMENT

I wish to announce to the many readers of the American Poultry Journal that I am no longer connected with the Dyer Portable House & Mfg. Co., but am again in the harness where I have full charge and cannot be dictated to by any one. I was the one that first put those houses on the market and the one that kept them before the public, but having no one to dictate to me I will offer for the next thirty days a discount of 15 per cent on any article in our catalogue from the Dyer Portable House Co. If you have not a catalogue send for my new addition which is on the press and will be ready in a short while, or send for supplement by return mail today. Yours truly,

John Dyer : 4450 North Spaulding Avenue : Chicago, Illinois

## WHAT EXPERTS THINK OF IT

### "Most Complete and Comprehensive"

Gentlemen: Your 1913 Year Book received and carefully inspected. We find it to be a most complete and comprehensive work. Very truly yours, Leo. T. Robinson, Editor Nat. Barred Rock Journal, Union City, Mich.

Dear Sir: I am satisfied you have succeeded in giving to the public a book of permanent value, one that the editors and artists should be proud of. The Year Book is a welcome addition to our poultry literature. Yours truly, J. H. Drevenstedt, Editor American Poultry World, Buffalo, N. Y.

Gentlemen: You certainly deserve great credit for publishing such an excellent Year Book. Judging by its merits, it should meet with great success. Sincerely yours, A. G. Studier, Editor R. I. Red Journal, Waverly, Ia.

## 11 Four Color Pictures

The American Poultry Journal Year Book for 1913 contains eleven four-color pictures of fowls made by the famous poultry artist, Louis A. Stahmer. Three of these pictures are double-page in size (6½ by 9½ inches, each showing one male and four females) and they were all made from life by the new four-color photo engraving process. Eight of these colored pictures are mounted on heavy tan paper and are suitable for framing. These beautiful pictures have created a sensation wherever seen as they represent the highest type of thoroughbred fowls and they are beyond question the most beautiful and artistic set of exquisite pictures of pure-bred poultry ever published. To appreciate these pictures they must be seen, as it is almost impossible to find words strong enough to describe their natural beauty and artistic background taken from nature's scenery, with its charming hues and tints of the glorious rainbow.

## "MENDELISM AND THE LAWS OF HEREDITY,"

By Rev. F. W. Sturgus, M. A., of England, occupies 36 pages of the Year Book and is undoubtedly the best exposition of Mendellism and the laws of heredity in relation to poultry breeding that has yet been published and is worthy of deep study by our American breeders. This one article by this noted authority, is worth many times the price of the book to every breeder of fancy poultry.

## "The Poultryman's Encyclopedia"

is one of the big features of the book, giving a complete description of 29 common diseases of fowls, their causes and cures, explanation of all technical terms used in the poultry industry, and also treating briefly but fully such subjects as How to preserve eggs, Making feeding sprouted oats, Soft-shelled eggs, Right size of poultry house, Broilers, Broken legs, Curing broody hens, Care of setting hen, Capons, How to stop cock crowing at night, Cockerel and pullet breeding, Double and single mating, Color feeding, Colony houses, Contents of egg, Copulation Crate fattening, Dust bath, Egg bound, Egg and feather eating, Feed for fattening, Grit, Flavor of eggs, Incubators and cellars, Influence of the sexes, Insect pests, Killing and dressing poultry, Mash feeding, Molt, Nests, Perches, Scratching sheds, Sitters and non-sitters, Telling the sex, Removing spurs, Watering devices, Ventilating houses, How to give medicine, Scaly legs, etc. All the above and many more items are arranged alphabetically for instant reference, making it truly a Poultryman's Encyclopedia.

The Year Book is printed on high grade enameled book paper and the binding is linen thread sewed to make it flat opening. There is nothing cheap or trashy about the book as no expense was spared to make it a representative of the best present day standard of artistic printing and worthy to be handed down to posterity as an example of what the best printer could produce in the year of 1913.

No book of this kind has ever been presented to the American public before. Think of it 379 pages, 11 colored illustrations, the best articles that money could buy, on the most helpful subjects, and complete show reports for 1912-13.

Prices—\$1.00 for the de luxe cloth bound edition and 50c for the paper bound edition, express prepaid.

You can Get the Book FREE

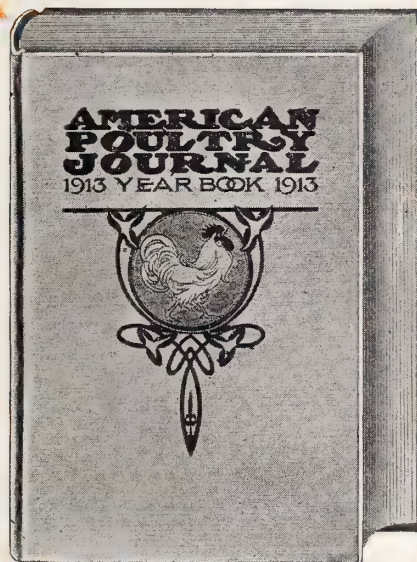

# NEW BIG POULTRY BOOK FREE

## American Poultry Journal Year Book for 1913

Is undoubtedly the greatest poultry book ever published in this country and we are giving you an opportunity to get this book ABSOLUTELY FREE of all cost. ## EVERYBODY PRAISES BOOK

### "An Excellent Book for Poultrymen"

American Poultry Journal,  
Gentlemen: We have looked over the Year Book with a great deal of interest and find it filled with valuable poultry information. It is certainly an excellent book for poultrymen. Yours truly, C. H. Chaplin, Sec'y Sheffield Farm, Part. Wyandottes, Glendale, O.

### "More Than Pleased"

Dear Sirs: Received the Year Book for 1913, and must say that I'm more than pleased with same. I think this a great book for amateurs. Yours truly, R. P. Schneider, West Newton, Pa.

### "Is Worth Waiting For"

Gentlemen: The Year Book has reached me and more than fulfills my expectations. It is worth waiting for. Yours, Edwin R. Frazer, Oakland, Cal.

## Poultry Show Reports

One of the most valuable features of the Year Book to the exhibitor and breeder is the complete reports of the leading poultry shows held during 1912-13. 1st, 2d and 3d prize winners, with judges making the awards and number of entries in each class, are reported of nine of the largest shows, and 1st prize winners of the next 32 largest shows, and shows having less than 1000 entries are compiled into a directory, giving number of entries, entry fees, date of show, name of secretary, who furnishes the coops, etc.

The Year Book also contains a Specialty Club Directory, Experiment Station Directory, Poultry Judge's Directory, Biographies of 30 successful prominent breeders; The American Poultry Association, its officers, branches, Organizers, and what it is. Complete reports of the National Egg-Laying Contest; North American Egg-Laying Competition, and the Inter Ocean-Midlothian Farms Egg-Laying Contest.

## NOT A ONE MAN BOOK

The table of contents shows that it took 29 of the best poultry experts to edit and write the great American Poultry Journal Year Book for 1913.

The editors of the Year Book are: Jas. W. Bell, Editor in Chief; Clarence Ward, Managing Editor; Louis A. Stahmer, Artist and Contributing Editor; Dr. Prince T. Woods, H. H. Stoddard, C. W. Zimmer, Helen T. Woods, Miss Carey of England, are the contributing editors, besides 21 special articles by leading specialists on poultry culture.

## The Year Book Contains

379 PAGES, all chuck full of valuable, up-to-date information for the poultry raiser, such as "The Poultryman's Calendar," telling what to do each month in the poultry yard; many articles by prominent breeders on such subjects as Line breeding with chart, Dr. Wood's Improved Open-Front Poultry Houses, with illustrations showing how to build one; Capons and Caponizing, with illustrations; Feeding the Layers, with feeding formulas and table of food values; Opportunities in Poultry for the Farmer; Advertising Pure-Bred Poultry; A Simple Indoor Fireless Brooder, with illustrations; Stoneburn Trap Nest, with illustrations showing how to build one; The Diaphragm Open-Air Poultry House, with illustrations; Gillette Open-Air House; Old and New Breeds; and many other special articles by leading specialists of this country and England.

The Book is a comprehensive review of the poultry industry for 1912-13, all thoroughly and carefully indexed for instant reference. It is worth \$5.00 of any poultryman's money.

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York, Winter 1910-1911.

The Three Greatest Living Barred Rock Males

# E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

Win the most remarkable record beyond all precedent in Barred Rock history at the imperial and most classic show of all America—Madison Square Garden, New York—this winter of 1913. Winning as follows:

First, second, sixth and eighth on cockerels. First and sixth on pullets. First, second and fifth on exhibition pens. First on cockerel mated pen. Second, third, fourth and fifth on cocks. The Imperial Prize of the show, Sweepstakes special for champion male. Sweepstakes special for champion female. Diploma presented by the American Poultry Association for best cockerel. Sweepstakes cup for best Plymouth Rock hatched in 1912, male or female, any variety. Challenge silver cup for best exhibition pen. Special best shaped male. Special best colored male. Special best colored female. Best cock, cockerel, hen and pullet, four best cockerels, four best pullets, \$25 special prize, presented by the New York Show for finest display. All silver cups and cash specials—four times as many first prizes as any competitor. More first prizes than all competitors combined. More first, regular and special prizes than won by any exhibition of any breed.

## My Exhibition of 56 Birds Was the Best the World Has Ever Seen

No other Barred Rock breeder has ever produced or is producing such matchless quality. Every feather in my exhibit was bred on my farm. My First Prize Champion Cockerel and First Prize Champion Pullet are years ahead of their time. They are the produce of the highest skill. No other Barred Rock breeder has ever accomplished the unprecedented achievement of winning the two greatest prizes in the world, Champion Male and Champion Female, at one show in Madison Square Garden. For 25 years at New York my "Ringlet" victories have been complete; my clean sweep of 1ST, 2ND, 3RD, 4TH AND 5TH PRIZES on pullets has never been approached at Madison Square Garden and stands alone and unequalled. The Imperial "Ringlets" are the standard by which all other Barred Rocks are judged. To meet success in winning prizes you must have my birds and eggs. I will sell you grand exhibition birds for any show, and breeders of this Richest First Prize, New York, blood. Richly illustrated 70-page catalogue upon request. It is full of original pictures of New York winners from life.

**Eggs** From the finest exhibition matings in all the world, \$10.00 per setting; four settings, \$35.00 one hundred eggs, \$60.00. One-half these prices after June 10th.

PRESIDENT INTERNATIONAL ANCONA CLUB

## Remember That—

### RUSSELL CAVE POULTRY YARDS' WHITE ORPINGTONS

Are ready for you to win at your county fairs, state fairs, or the large Winter shows at prices for which no other breeder can afford to sell utility stock. Cocks and hens from \$5 up. Large, vigorous cockerels and pullets at the same price. Express prepaid on all orders. Address

**Louis Lee Haggin, Prop., R. 3, P. O. Box 1025, Lexington, Ky.**

# American Poultry Association

The poultry industry of this country amounts in the aggregate to one billion dollars per annum. These figures paralyze the imagination.

The American Poultry Association is the largest live stock organization in the world and its membership is increasing with tremendous rapidity. On its roll are the leading breeders and representative poultrymen of Canada and every state in the union.

Every breeder, fancier, man and woman in the United States and Canada who is interested in poultry of any kind should join this great organization.

### The American Standard of Perfection

The Standard of Perfection is the official guide for the breeding, mating and judging of all poultry. It gives a close and detailed description of every breed and variety of chickens, ducks, geese and turkeys, with illustrations from living models. This book is published by the American Poultry Association at an enormous expense and is the American authority. You can not raise poultry successfully without this American Standard of Perfection. Prices postpaid from the publishers of this paper. Cloth binding, \$2; leather binding, \$2.50. Send all orders to American Poultry Journal, 542 So. Dearborn St., Chicago, Ill.

On its shoulders rest this gigantic Billion-Dollar Industry.

Your interests will be promoted and safeguarded. You may compete for the association diplomas and gold and silver medals at the shows, and be entitled to all the help that honest organized effort can give you.

You will have a voice in shaping the course and policy of the association. Making it recognized by nations and governments. Your name should be one of the thousands of the honored members of this association. We urge you to write immediately for information and application blank. Address

## World's Foremost White Wyandottes

My guarantee to please has been my success and satisfaction to my patrons. Read these few testimonials. Have bred the winners for fifteen years for the best shows.

West Union, Pa., Feb. 20, 1913.

J. H. Jackson, Hudson, Mass.

Dear Sir:—Just won 3 1st, 2 2d, 3 3d, 4th and 5th prizes at Pittsburg, Pa., did most as well at the exposition in Pittsburg in January with birds bought and bred from yours. I have been winning highest honors in strong competition against the most noted strains of the U. S. and Canada, and all with your strain and breeding.

W. SCOTT BROWN.

Corydon, Ind., Feb. 10, 1913.

J. H. Jackson, Hudson, Mass.

Dear Sir:—Third year in succession I have won lion's share at the Indianapolis Show, winning three 1st, one 2d, two 3d, 4th and 5th prizes. 1st hen, 2d cockerel and 5th pullet with birds direct from you, others of your strain.

E. L. MCKINSTER.

San Angelo, Tex., Feb. 4, 1912.

J. H. Jackson, Hudson, Mass.

Dear Sir:—I won at the Dallas, Tex., Show, over 5,000 birds, 1st and 3d cockerel, 1st, 2d and 3d pullet, 1st pen with the birds bought from you. I consider this a great winning at the Madison Square of the South. You are entitled to the credit of their winning. I am very thankful for honest treatment and will look to you for future winners. Sincerely, MRS. W. A. WRIGHT.

Eramosa, Ont., Can., Nov. 16, 1911.

J. H. Jackson, Hudson, Mass.

Dear Mr. Jackson:—Had a great winning at Toronto Show, winning the \$50 cup best male and two females, also \$100 challenge cup for best display, including 1st cockerel and 1st pullet. I have had the very best results with your strain and have won in a number of shows but in this the competition was very strong from many known breeders. I wish to thank you for the good treatment you have given me. Very respectfully, REV. C. HERBERT WOLTZ.

SCHENLEY HEIGHTS POULTRY FARM  
C. F. Rankin, Prop. 1202 Commonwealth Bldg. Pittsburgh, Pa.

## A Natural Poultry Land

Poultry do best in an open winter country. It is artificial to house birds 4 to 5 months in the year.

In the open air, with ample green feeds the year around, they lay better, grow faster and are more vigorous.

The Southeast is a natural poultry region. A growing season of 200 to 300 days annually (varying with locality) allows for a wide range of green foods the year round and reduces the cost of maintenance to a minimum.

If you intend starting in the poultry business and have but limited means, no section can offer you more certain success than the Southeast.

Land at \$15 an Acre up

prices varying with improvements and location, can be purchased in many sections near to good local markets. A Northern Florida poultryman sells his eggs the year around to a local hotel for 40 cents per dozen. Thus profitable home markets are assured. Small fruit growing in connection with the poultry business makes a profitable combination.

Send at once for the "Southern Field" magazine, lists of farms for sale and other information you may desire.

# CANDEE

## SOLD UPON A MONEY BACK BASIS

*The One Incubator that has Proved a Success  
in all the United States and Canada,—in every  
section and every climate.*

Deliveries of the 1914 Model Candee are being made—by the carload.

The hatching record made by the 1913 Model has caused an unprecedented early demand.

Orders from present customers for extra sections prove that the Candee is the machine the poultry world has been waiting for.

The Candee automatic is doing for the poultrymen what automatic machinery does for the farmer.

## The 1914 Model is Not an Experiment

The Candee stands upon its record of proven success—automatic, reliable. It is the one incubator that has no overheating problems—no night watching or alarms—no hand regulated trays, no complications.

It is unlike any other incubator.

Hot water heat only enters the egg chambers when heat is needed. **The rest of the time it is shut out.** The automatic water regulators do the work heretofore done by hand.

## In Justice to Yourself Before You Buy

**Insist upon a Money Back Guarantee.**

**Insist upon a list of users of the particular egg capacity you want.**

**Insist upon knowing what it will cost installed.**

**Insist upon having pictures and directions showing how the parts go together.**

Then you will know that the Candee stands in a class by itself and why Candee customers are making the most money.

Our catalogue is free for the asking, describing all sizes from 1,200 eggs upward, our brooding systems and giving you complete information.

**Candee Incubator & Brooder Co., Dept. 2, Eastwood, N. Y.**

**The Only Incubator Company Who Manufacture Their Own Heaters**

## Making Security Doubly Sure

Now Comes an  
Added Feature  
of Security in the

# Hall Mammoth Incubator

*The Original and Standard*

**T**HE HALL was the first Mammoth Incubator in the field and it is still the first in the invention of new features which render custom hatching on a big scale safe, reliable and profitable.

From the first, the Hall Mammoth Incubator contained the most simple and best features embodying correct principles of safe incubation. The latest proof of our policy to introduce improvements wherever improvement was possible—the newest feature which still further strengthens the security and absolute reliability of the Hall Mammoth Incubator—is our new Safety Temperature Control.

### The New "Security" Feature

Furnishes a doubly effective method of heat regulation—affords a positive insurance against all possibility of accident or carelessness of operator. It is simple yet wonderfully efficient. It accomplishes something that no other similar control system has ever done—controls the temperature of the water *before* it enters the hatching compartment. It is a real double control, with a single adjustment.

### What the Hall Does

This new safety feature is only one of the many reasons why you should investigate the Hall Mammoth Incubator. The Hall reduces fuel cost and saves labor expense. It has the safest and most convenient tray lifting device. It has slatted bottoms, providing ample ventilation without drafts. In a word, it's the *one* Mammoth Incubator that can be unfailingly relied upon to hatch good chicks in large quantities.

### The Hall New Safety Temperature Control

In the Hall Mammoth Incubator the primary method of heat regulation is by the *expansion* of the water in the *heat radiating pipes through their connection with the expansion tank.*

This action through the rising of expansion tank float (due to the increasing heat of the water) is transferred by one direct lever movement to the drafts of the furnace, controlling amount of oxygen supplied to the fuel and the amount of chimney draft through the fire; thus the amount of heat generated.

In this way the furnace delivers to the Hall Mammoth Incubator the requisite amount of heat and maintains uniformly in the hatching compartment a proper incubating temperature—the vital essential for successful incubation.

Now the *new Hall Safety Temperature Control* is essentially an *extra* check on this control system. It renders it absolutely impossible for the temperature in the hatching compartment to exceed the temperature it is adjusted for. It guards against the possibility of accident or carelessness of operator.

This control device consists of a frictionless double flow-diverting valve. By means of its one inlet and two outlets, together with its connection with the expansion float, it automatically diverts water when heated above the safety point. Excessively hot water is diverted into an auxiliary coil enclosed in a wooden flue, to carry away excessive heat. The water runs through the auxiliary coil to be cooled; and the heater must deliver water at the right temperature *before* it enters the pipes in the hatching compartments.

A feature of this Hall safety control is the fact that *the water* is controlled *before* it enters the incubator, instead of *after* it enters the hatching compartment, which is the weak feature of all other control systems.

**Read Our New Catalog** Write today for catalog which describes fully the new Safety Temperature Control and all other exclusive advantages of the *Hall*. Every poultryman who keeps abreast of the latest methods of incubation should by all means read this new Catalog.

**HALL MAMMOTH INCUBATOR CO.**

132 Southern Avenue

Little Falls, N. Y.

# S·C·WHITE LEGHORNS

## THAT LAY, WEIGH AND WIN

There is more real proof in a teaspoonful of experience than in a demijohn of talk.

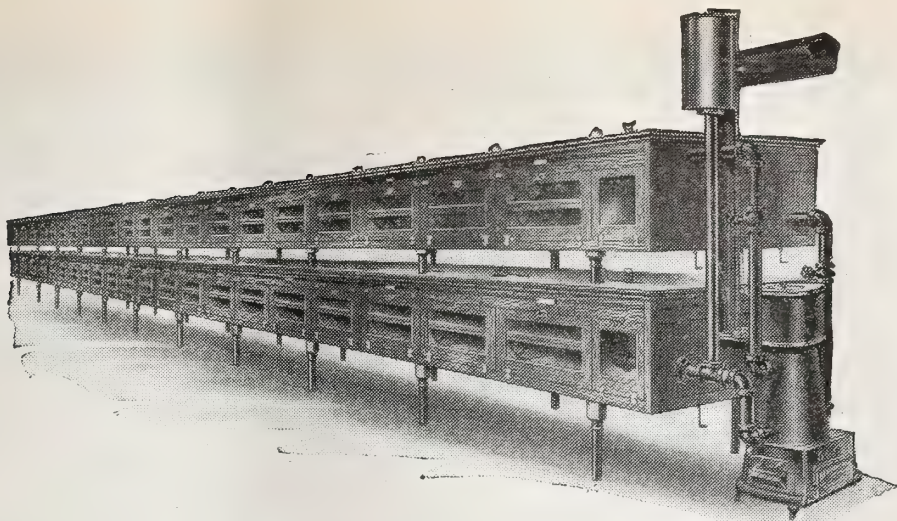

If you have ever bred the GROVE strain of SINGLE COMB WHITE LEGHORNS, you know from experience that they represent just what we claim for them.

Upon receipt of 50 cents in stamps or coin, we will send you postpaid our new sixty-four page book on poultry, which explains in detail the method of raising, feeding and conditioning line bred poultry for successful results.

**E. W. Grove, Jr.**

Route 1, Clayton, Missouri

## Turns all Eggs in 60 Seconds

*Exclusive Newtown Features: Automatic One-minute Egg Trays Turner, Automatic Coal Feeder at Heater, Automatic Regulator of Heat, Ventilation and Moisture at each Compartment, Automatic Temperature Indicator, Automatic Alarm and Five Automatic Safeguards against "Off" Temperature. Single and Double Decks.*

Turn all your eggs in less than a minute by turning a handle at the end of a Newtown Giant Incubator. Turn them as often as the old hen—without effort and without loss of heat—and get more and better chicks.

Put 3 to 7 buckets of coal in the Coal Magazine of the Newtown Heater and you need not fill it again until tomorrow. The coal

is fed automatically, just as needed, and you have a fire that is always uniform and easy to control.

Have the Newtown Automatic Temperature, Ventilation and Moisture Regulator at each compartment give you big hatches of heavy, healthy chicks that live.

# Newtown Giant Incubator

1914 Model

Let the Newtown Automatic Temperature Indicator show you the temperature throughout the system without your stooping and extracting the thermometer from every compartment.

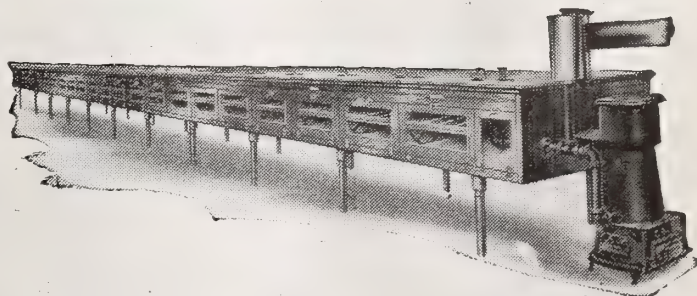

Sleep at nights during the hatching season. The Newtown Automatic Alarm will ring a bell in your bedroom if you're needed.

Let the five Newtown Safeguards against "off" temperature make your hatching a pleasure instead of a worry and a "grind."

If you have a hot-water-heated incubator and your business demands an increase of hatching capacity, instead of spending your money on another cellar, invest in an improved Newtown Giant to be placed above your present machine.

If your cellar is too small for the size you need, it is not necessary for you to dig another—install a Newtown Double Deck.

You realize the great value and economy of the 1914 Newtown improvements and exclusive features. Send now for catalog and Giant Circular I that will give you all the facts.

**NEWTOWN PRODUCING CO., Newtown, Pa.** (Near Philadelphia)  
Manufacturers of Giant Incubators and Brooding Systems

# Tremendous Saving If You Can Use Any of These Odd Lots

## ROOFING AT HALF PRICE

**Galvanized  
Steel Roofing Is  
Fire, Water and  
Lightning Proof**

**\$1.25**  
Per 100 sq. ft.  
Buys Best  
Steel  
Roofing

Here's an odd lot of **Corrugated Iron Roofing** which we were fortunate enough to buy at a price which enables us to sell it for only \$1.25 per square—just about half what it is really worth. Is brand new, perfect, first class in every respect, but light weight. Not galvanized but black steel roofing. Sheets are 22x24 ins. by 1 1/4 in. corrugation. Specify Lot No. BB-700. Price is f. o. b. cars Chicago. Write for our **Special Freight Prepaid Prices** on new galvanized roofing. Our prices lowest ever offered in the roofing business. Galy roofing \$2.50 per square and up. Anything you want in metal Roofing, Siding or Ceiling.

### 62c Per 108 Sq. Ft. Buys Best Rubber Surfaced "Ajax" Roofing

This is our one-ply "Ajax" brand, guaranteed to wear as long and give as good service as any rubber surfaced roofing on the market. Put up in rolls of 108 sq. ft., containing 3 to 4 pieces to the roll. Price of 62c per square is f. o. b. Chicago and includes necessary cement and caps to lay. At 75c per square **We Prepay Freight** to any point east of Kansas and Nebraska and north of Ohio river provided order is for at least 3 rolls. Write for prepaid prices to other points. The grades of ready roofing fully 30% below regular quotations. Send for free samples and roofing catalog.

## Previous Price Records B-U-S-T-E-D WIDE OPEN!

We're always smashing prices—and it sometimes happens that a lucky purchase enables us to smash them a little harder than usual. This is one of those out-of-the-ordinary occasions. There isn't another firm on earth that occupies the unique position in the commercial world that we do. Our enormous buying power represented by our ten million dollars capital makes it possible for us to buy for spot cash, entire stocks at manufacturers' and jobbers' forced sales, receivers' and sheriff's sales, etc., that are beyond the reach of ordinary buyers. Often our purchases enable us to sell the goods for actually less than manufacturing cost—and usually for about half what dealers ask for the same goods. Mind you, this merchandise is brand new, and exactly as represented. The prices here quoted tell their own story of your saving. These are odd lots we're offering and to move them quickly we've cut the price to the limit. It would be nothing short of business suicide for any other firm to offer this quality of merchandise at such ridiculously low prices, but, owing to our method of buying, we can easily afford to do so. Any man who really affords to pass up a chance like this? Remember your saving is from one-fourth to one-half.

## No Money Down

You can buy a carload of material from us without paying us a cent in advance. All we want to know is that the money will be paid us as soon as the material is received, unloaded and checked up. We certainly would not dare to do this if we furnished anything but strictly first-class material. Our building material is right, and our terms more liberal than that offered by any other concern.

### GUARANTEE

This Company Has a Capital Stock of Ten Million Dollars. Its honesty and upright methods have been known for 20 years; we have thousands upon thousands of customers who have yearly taken advantage of our special sales. We say to you, that no matter what you buy from us, if you fail to find the material absolutely satisfactory and according to your requirements and expectations, then we will take back such unsatisfactory material, refund your money and pay the freight charges both ways.

## WIRE AT CUT PRICE

**BARB WIRE  
Less 2c Per  
Rod**

New galvanized, heavy weight barb wire, put up on reels, about 100 lbs. to the reel. Lot 2-BB-26, per 100 lbs. \$2.05. Galvanized barb wire, light weight, first grade, best made, put up exactly 80 rods to reel, 2-point barbs. Lot 2-BB-28, per reel, \$1.40.

### WIRE NAILS \$1.38

Per Keg,

10,000 kegs, put up 100 lbs. to the keg mixed, all kinds together. Lot 2-BB-33, price per keg \$1.38. 1,000 kegs of ten pennyweight regular wire nails 100 lbs. to the keg, while they last, per keg, \$1.05. Write for free Wire and Fence Catalog. Send coupon

### Smooth Galvanized Wire, \$1.25

Per 100 lbs., 1

Suitable for fences, stay wires, grape vines or for any ordinary purpose where wire is used. Is irregular in length—ranges anywhere from 60 to 250 feet. \$1.25 per 100 lbs. for No. 6 gauge. Other sizes in proportion.

### Best Hog Fencing, Per Rod, 15c

Another remarkable bargain. High grade, perfect fence made of No. 9, 11 and 12 wires, 25 ins. high, square mesh, put up in suitable size rolls. Lot 3-BB-31 per rod, 15c. Other heights in proportion. Staples 100 lbs., \$1.75.

# BUILDING MATERIAL

## \$739.00

### Buys the Material to Build this Home

This beautiful modern, full 2-story, 7-rooms and bath home has been sold nearly 1,000 times; copied and imitated all over the United States. It is not only a beauty but is thoroughly practical for any climate. Substantial construction throughout. No. 1 joists, rafters and studding; clear siding, clear flooring, clear shingles. Beautifully grained clear yellow pine interior trim. All material necessary to build with exception of plumbing and heating and masonry material for only \$739.

This price positively cannot be equaled anywhere else—is easily 25 to 50 per cent below any local dealer's prices. By long odds it's the biggest house bargain we've ever offered and is a special for the fall of 1913 only. We have hundreds of unsolicited letters from customers who have bought this house some of whom saved as much as \$1,000 on the complete home. At this special price you should do as well, or even better.

We guarantee prompt shipment right from our Chicago stocks, where if you wish, you can come and see it loaded. No money down. Even if you do not plan to build now it will pay you big to order the material now and build later. It's too big a cash saving for you to overlook.

**\$2.00 Buys Complete** Perfect Blue Print Plans and Architectural Specifications, including full descriptive Material List, giving the size, style, quality and catalogue number of the various items entering into the construction of this home. **\$10.00 Book of Plans Free** of modern homes, bungalows, barns, portable houses, garages—the most perfect book of plans ever given away. Handsome illustrations, clear floor plans, correct low prices. You need this beautiful book; be sure to check it off in coupon below and mail today. It's absolutely free.

### Architectural Service

**Personal Service.** That's what we mean. Personal service in every sense of the word, either by mail, or if you come to Chicago. We have an Architectural Department that is developed so far beyond the attempts of others, that there is simply no comparison. In this department we offer you service of a character that is bound to appeal to you.

If you have not formed a particular idea as to just what kind of a building you want, tell us in your own way, what your general ideas are, and if possible send us a rough pencil sketch.

This Will Cost You But Two Cents and we will reply promptly, giving you the information that will be worth one thousand times the 2c. You can sit right down in your own home, and see your plans developed step by step from crude ideas into a practical, architecturally correct, and perfect design. Our charge for such service is no more than that in the end it is absolutely free, for the reason that we refund each charge when your material is ordered from us. We will make you a proposition that will mean the saving, out of all preliminary worry and expense and which will show you how to proceed, point for point, with the work in hand.

### COME TO CHICAGO

If you have time. Bring your sketches and ideas with you. Our architects, expert estimators, plumbing and heating engineers will quote you while you wait, and give you much valuable information on the subject of architecture and building. Remember our business extends from coast to coast. We have taken the best ideas from all the land, have assimilated them into high quality, modern, up-to-date homes.

### Save 1/2 On Heating Plants

Most up-to-date hot-water, steam and hot air heating plants manufactured. Send sketch of your floor plans, size of rooms, etc., and we will make estimate on plant best suited to your building that will save you fully half. No experience needed to install—we furnish blue print drawings, specifications and full instructions so that you can install plant without aid of steam fitter. Plants guaranteed.

### Axminster Rugs, 75c

We bought at New York Auction an enormous stock of high grade, brand new rugs and floor coverings. 75c buys Axminster Rugs of extra grade. This is a sample of our money saving bargain. Write for our complete free Rug Catalog, showing actual color and designs.

### Iron Pipe and Fittings

Good iron pipe in random lengths, complete with couplings, suitable for gas, oil, water and conveyance of all liquids; size 3/4 to 12 in. Our price on 1 in. per foot 3c; 1 1/4 in. at 4c per foot. Complete stock of valves and fittings. Send your specifications.

### Bathtub Complete \$13

This is the white enameled cast iron, one piece, heavy roll rim bathtub; fitted with the latest style nickel plated trimmings, including Fuller double bath cocks for hot and cold water; nickel plated connected waste and overflow, and nickel plated supply pipes. It is 5 ft. long and is good enough to answer the needs of any man. Lot 6-BB-101

### DON'T BE AFRAID

Sometimes people seem to be afraid to send their orders because they think it is impossible for us to sell strictly first class merchandise at the ridiculously low prices which we quote. We want to tell you emphatically that such fears are absolutely groundless. We freely admit that our low prices often do appear to be altogether out of reason; but just consider, please, in what vast quantities and in what manner we buy our stocks and it must be perfectly plain to you that our low quotations are fully justified and that there is REAL QUALITY behind every article we sell. Our guarantee is so broad and binding that you take no chances when you deal with us. Your money back, including freight charges, if not satisfied.

## The Chicago House Wrecking Co.

prominently known for 20 years as the great "Price Wreckers" is now being operated under the name of Harris Bros. Co. There is no change in our policy, or in our business methods—we promise the same careful attention to your wants, and the same remarkably low prices as heretofore.

John W. Poley, Prop., Box A, Linfield, Pennsylvania

## Royal Blue Orpingtons and Barred Rocks

For the winter shows we shall have some grand Barred Rock cocks that can win in any company, also cockerels of the same class. We have a few Blue Orpingtons for the early Fall Shows that we can let go. Don't delay getting into this variety. Last season at New York, Boston, Guelph, International Show, Canada, Detroit, Barred Rock males bred in my yards won 5 prizes, the rest of the breeders in the United States and Canada combined won 3 firsts amongst them.

HALDIE NICHOLSON :- LEOMINSTER, MASS.

## Wyckoff's S. C. W. Leghorns

Acknowledged Everywhere the World's Greatest Laying Strain—Unequalled in standard qualities. Remember that we are the originators, and for more than thirty years specialty breeders of the justly celebrated Wyckoff Strain of S. C. White Leghorns, the most profitable strain of poultry in America today. Place your orders at headquarters and make no mistake. 2,000 choice yearling hens, fine strong early cockerels and a few yearling cocks; must be sold at once to make room, and prices will be made especially attractive to early buyers. Send for catalog and state wants as near as possible.

Peabody Farms, Poultry Dept., Hinsdale, Illinois

## ONLYA FARM WHITE WYANDOTTES

Now is the time to make your arrangements for the fall and winter shows. We have a large flock of young stock, fast reaching maturity that will take some class to beat. We are not going to make our prices high on our show birds this season which will enable you to get something choice for showing and breeding. We have quite a number of show cocks and hens on hand which will enable us to supply you with anything from a single bird to an entire string. All birds sent on approval and can be returned at our expense.

Chas. Staaff, Mgr. : Florham Park, N. J.

# Rose Comb Reds

Cockerels and pullets won ready. Hundreds of young Reds on free range await our selection. Bred from Boston, Chicago, Pittsburgh, Buffalo and Cleveland winners. Write us your wants in show birds or breeding stock. When writing mention American Poultry Journal.

Simmons & Crittenden : : Geneva, Ohio

# White Rocks and White Wyandottes

Write now, right now. We have the best quality we ever raised this season, in young stock and know that we can please you if favored with your order. Try us and be satisfied. Remember we have a record for years back. At Boston's Great Show, 1913. We won four out of five firsts. Baltimore, Md., 1912, five firsts on both breeds. As we did not sell any early hatching eggs, it enables us to raise a larger number and of the best quality. Telephone Marlboro Exchange. Mention American Poultry Journal when writing.

# Tompkins' Rhode Island Reds

## BOTH COMBS

Better now than ever before. Hundreds of high-class breeding birds at reasonable prices. Write us before ordering elsewhere. Eggs from high class pens.

Concord Poultry Yards, Harold Tompkins, Prop., Concord, Mass.

Don't confuse this with ordinary "make-shift" roofings---we guarantee it 15 years and inside each roll furnish modern ideas for laying it artistically.

# Certain-teed Roofing

Rolls Shingles

When ready roofing was first put on the market, the public demanded that it must prove it's value by

actual wear on the roof. **Certain-teed** Roofing has stood the test for years—it has made good in all climates and under the most severe conditions. When artistically laid it makes a roof you can well be proud of. You can't tell how long roofing will wear by looking at it—so for your own protection, accept no substitutes—be sure the **Certain-teed** Quality Label is on each roll.

Sold by dealers everywhere at a reasonable price.

General Roofing Manufacturing Company  
E. St. Louis, Ill. York, Pa. Marseilles, Ill.

# BABY CHICKS

Will have no more chicks until March, 1914. Catalog free. 20th Century Hatchery, Box 73, Chatfield, Ohio

## Great Chicago Show, Jan'y 5 to 11, 1914

Held under the auspices of the Chicago Poultry Breeders' Association (Incorporated). F. A. Kaup, President; L. A. Lee, 1st Vice-President; Wm. G. Voss, 2d Vice-President; A. E. Lemieux, Secretary; J. L. Deaver, Treasurer. The show of the breeders, by the breeders and for the breeders. Our judges, Shellabarger, Hemenway, Coleman and Hayes, have national reputations for square dealing and are free from the poultry press. Largest display of cash prizes and silver cups. Every premium guaranteed. Entry fee \$1 for singles and \$3 for pens. Free uniform cooping and banding. No private or color bands allowed. Show will be held in large East End Hall, 645 North Clark Street, near center of city. 20,000 square feet floor space and flooded with daylight. Premium list ready November 1. Entries close December 15. For copy send postal to A. E. Lemieux, Sec'y, 4539 Eberly Avenue, Chicago. We will profit by experiences gained in the last ten poultry shows held in Chicago!

## AT NEW YORK STATE FAIR, SEPTEMBER, 1913 FAIRVIEW WHITE ROCKS

Make a sensational win as follows, after traveling three days without feed or water and after being judged less than two hours after arriving at fair: First old pen, third young pen, first and fourth cocks, second and third hens, third cockerel and first and fifth pullets. Just think this over carefully! In all I showed twenty birds and seventeen of them were in the winning. I have over 1,000 young birds with the blood lines of these and other noted winners and now is the time to place your order for winners or breeders. Write your wants and mention American Poultry Journal.

GUY DAILY, BOX A, JEFFERSONVILLE, INDIANA

## LESTER TOMPKINS' Rhode Island Reds

The originator of this famous strain that has made the Reds one of the most popular breeds of fowl on earth, always at the front both in the show room and laying contests.

### My Recent Winnings at Madison Square Garden and Boston

prove they are still in the lead, winning display special at both shows, 1st hen in both combs and all female shape specials at Garden, 1st cock and shape special in single comb. Also all display specials and state cups for both combs at recent Boston show against birds that had been considered unbeatable. My breeding pens this season are simply grand. Prices right. Some extra choice bargains in breeding stock. Both old and young stock of the highest quality ready for showing in the Fall and Winter shows.

LESTER TOMPKINS,

::

::

M. R. JACOBUS BOX 3-J RIDGEFIELD, NEW JERSEY

## YOUNG'S STRAIN S. C. WHITE LEGHORNS

(I HAVE NO OTHER BREEDS)

My strain again won every prize and special offered at the world's greatest show, Madison Square Garden, New York, January, 1913. My individual winnings were:

Cocks 1-3-4-5-6, Hens 2-4-5-6-7, Cockerels 1-2-3-6-7, Pullets 1-3-5, Pens 3-5

In fact, for the past ten years, my strain has won in every show of any note in the United States and Canada. They are the standard for all the Leghorns of all America, and the greatest layers of all varieties of domestic fowl. I have hundreds of yearling hens, from \$2.00 per head up for sale. (Remember you cannot win without my strain.) Mating list free. Address

D. W. YOUNG

MONROE, NEW YORK

Fifth Annual Exhibition--December 12, 13, 14, 15, 16, 1913

**Our Past Record**—Four of the most successful shows ever held in America. **Our Aim**—The world's greatest poultry exhibition. We have paid more premiums and put on more real down-to-the-minute features than any other show in America or abroad. We lead, others follow. If a feature is good, you will always find us first to introduce it. Nearly every act of the Coliseum show has been followed by other successful exhibitions. Look for our 1913 list; it surpasses all the rest. **No Risk, No Chances, Everything Guaranteed**—We, the undersigned stockholders, pledge ourselves, individually and collectively, to pay every premium offered by us that is won by the exhibitors: Ernest Kellerstrass, Reese V. Hicks, E. E. Richards, Frank Hare, Geo. H. Rudy, Jas. W. Bell, A. and E. Tarbox, D. M. Palmer, J. C. Dinsmore, H. C. Dippel, C. S. Byers, Chas. G. Pape, A. E. Martz, Wm. A. Stoltz, C. C. Coulter, Wm. A. Sibley, Theo. Hewes. Premium list Nov. 1st. Entries close Nov. 25. Your name on a card addressed to the secretary will guarantee that list will be mailed on time.

**Get More Eggs****With Banner Root Cutter**

Keep your hens in top notch laying condition by feeding freshly cut roots. Lower your feeding cost and get better results.

Roots contain egg making material. Keep hens laying in winter. Banner Root Cutter works fast—cuts any vegetables to fine shreds, easy for chicks to eat. Low priced—easy to operate—pays back its cost quickly. Free Book—tells all. Mail postal today. Address

O. E. Thompson & Sons, Ypsilanti, Mich.

**FEED**

More Phosphorus and Less Protein!

**"Hen-o-la" Dry Mash**

Fed in conjunction with

**"Hen-e-ta" and "Succulenta"**

Requires Absolutely Nothing Else

Because the three make a complete balanced ration, rich in phosphorus.

**The Lack of Stamina and Vitality**

In the birds is the cause of 95% of the failures in the poultry business. Therefore see to it that you are one of the successful 5% this year by putting your birds on this economical scientific horse sense system that produces Stamina and Vitality; convince yourself by giving it a thorough trial.

Let us send you report from a leading experiment station that has fed 31,500 lbs. "Hen-e-ta" during the past four years, and is still feeding same.

The above system makes poultry-keeping wonderfully simple and cheap.

If your dealer will not supply you, please write us for full information and prices on "Hen-e-ta," "Hen-o-la" Dry Mash and "Succulenta" tablets—green food substitute.

Valuable Booklets Free

If you will give us your dealer's name and address.

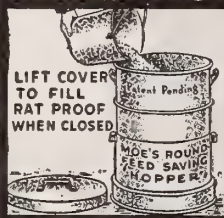

**HEN-E-TA BONE CO**

Newark, N. J. Dept. 1, Flemington, W. Va.

**BONE CUTTER FREE**

Every poultry-raiser needs a "Dandy" Green Bone Cutter. Cut green bone keeps fowls healthy, vigorous and productive. It is a wonderful food for increasing the egg supply and for pushing the growing chicks. The "Dandy" prepares the bone fresh every day—just right for feeding to best advantage. It feeds the bone to cutters automatically and is the easiest running, fastest cutter made. Write for catalog. STRATTON MFG. CO., Box 17, Erie, Penna.

### Increase Egg Yield This Winter, Save Money on Feed, Make Chicks Grow Rapidly, Strong

by installing an Ideal Grain Sprouter and feed your hens the green food that is absolutely necessary to insure prolific egg production.

Eggs are going higher in price every year, the demand is far exceeding the supply, and it looks like *good times* and *plenty of money* for the man who has one of our sprouters.

## The IDEAL Grain Sprouter

- is the *best machine* for sprouting grain ever made;
- will produce sprouts over two inches long in 24 hours;
- sprouts any kind of grain *better, in less time* and without fuss or muss;
- produces *three to four bushels* of feed from one *bushel* of grain;
- pays for itself in a single month by saving in feed bills, increasing egg yield, supplying food that makes chicks grow strong and vigorous.

The "Ideal" is made in several sizes—for a few hens up to hundreds. Can be used in summer (without lamp) as it has proper arrangements for moisture and ventilation to produce quick results and crisp feed.

J. W. MILLER COMPANY, Box 600 ROCKFORD, ILLINOIS

#### CONSTRUCTION

Made of best lumber—double walls, insulated with heavy deadening felt—inside lined with galvanized iron—frame of trays heavy galvanized iron—bottom of tray heavy wire netting—front of machine glass, which induces green sprouts. These sprouts require very small amount of artificial heat which is produced by the Ideal Safety Lamp, the fumes of which pass through ventilators.

#### Get Special Low Price Offer Today

Don't delay but write at once for special low price freight prepaid introductory offer, full particulars and description of this perfect grain sprouter. No poultry man should be without it. It is the *Biggest Money Maker for the Poultryman* since the Incubator was invented.

Made by J. W. Miller Co., Manufacturers of Incubators, Brooders and Poultry Supplies, which is sufficient guarantee of its excellence.

\$20<sup>00</sup>

E. F. HODGSON CO., Room 332, 116 Washington St., Boston, Mass.

Shingles catch fire like kindling

### This Roof is an Insurance against Fire

Yes—it is very attractive. And it's "spark-proof" too.

Stained shingles "look" nice—but no better than NEPONSET Proslate Roofing. And here the comparison ends. Let burning embers fall on a shingle roof and your house—your home—goes up in smoke. NEPONSET Proslate resists fire—there's no danger of the roof catching fire from flying sparks—if your roof is NEPONSET Proslate.

It's the acknowledged standard high-grade prepared roofing. In attractive shades of red and green. Costs less than shingles. Its protection from fire alone is worth its entire cost.

## NEPONSET

### Waterproof Building Products

#### Roofings

NEPONSET roofings are a fire protection, leakproof and long lived. Anyone can lay them. NEPONSET Paroid Roofing is for general use. NEPONSET Proslate Roofing is an ornamental roofing for dwellings. Attractive colors.

#### Building Papers

If NEPONSET Waterproof Building Papers are built into walls and floors, the building will be warmer, will cost less to heat and will last years longer. Recommended by architects, engineers and building owners everywhere.

#### Wall Board

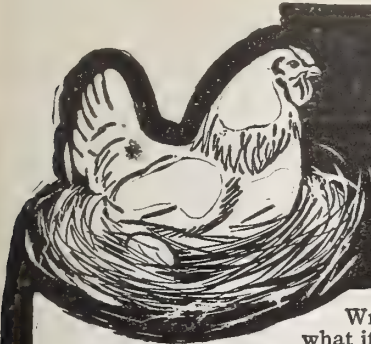

NEPONSET Wall Board is a scientific product which takes the place of lath and plaster; comes in sheets 32 inches wide. Remember, it is the only wall board with waterproofed surfaces that requires no further decoration. Anyone can put it up.

Are you going to build? Write for more facts about the products in which you are interested. Send for samples, free booklet and name of nearest NEPONSET dealer.

# Make Your Hens Lay

A FREE BOOK FOR YOU ON MAKING HENS LAY

Write today for our free poultry books and learn at once what it might take you, alone, years of costly experience to find out. You know how eager fowls are for bugs and worms. Our book tells why. Briefly, it's the animal food they want, and **must have**, in order to thrive best. Chicks, laying hens, cocks, all need it—to develop frame, muscle, feathers, to produce many eggs, to produce fertile eggs. To replace bugs and worms in winter, or, for yarded fowls, feed freshly cut raw bone, prepared with

## MANN'S LATEST MODEL BONE CUTTER

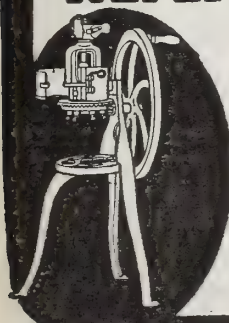

Try One Free—No Money Down

This feed is four times richer in protein (the egg-making, body-building element), than corn is, and it is more easily digested and assimilated. **Save** money by cutting down your grain ration. **Make** money by getting more eggs when eggs are worth most and by having better eggs for hatching stronger chicks, earlier and heavier broilers.

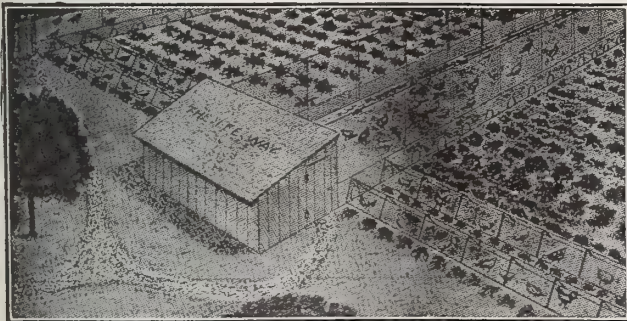

Mann's Latest Model Bone Cutter cuts the bone (and all adhering meat and gristle) into a fine, soft mash that fowls of all ages relish and can put to immediate use in producing profit for you. It turns easily, cuts rapidly, never clogs, wastes nothing. We sell it on **10 Days' Free Trial**, without money or deposit in advance—so you may be sure it is right. We even pay its freight back if you are not satisfied.

**WRITE FOR FREE BOOKS TODAY.** To read them is to know how to feed poultry for most profit.

**F. W. Mann Company, Box 56, Milford, Mass.**

# Here is THE LEE WAY

of growing chickens and garden on the same ground. The chickens fertilize, weed and cultivate the garden. The garden supplies green food, insects, dust baths and exercise for the chickens. It is simply a neat little arrangement whereby the chickens work between the rows of vegetables without harming the growing stuff.

**Lee has just invented** a new bottle filling machine for Germozone that fills 28 bottles at a time in six seconds; that is at the rate of 16,000 per hour. Also an automatic machine that will fill 10,000 cans of Lee's Lice Killer per day. That is **the Lee way**, to do things well with the least time, labor and

expense, and that is the same with all **Lee** products. They follow the easiest and shortest route to the best results.

**Lee's Lice Killer** is a great labor saver in poultry work. Before, one had to dust or dip, handle or grease, to get rid of lice and often burn the poultry house to get rid of mites. Now that is all changed. A few moments with a brush or handy Sprayer just before the fowls go to roost and it is done; you don't even touch the chickens. Four sizes: 35 cts., 60 cts., \$1.00, \$4.00. Lee Sprayer 50 cts.

**Germozone** cures quick or not at all. Germozone fits most cases of chicken disease and there is no long period of "Doctoring." One thorough application should cure the dreaded canker in one night; two or three applications suffice for roup, swelled head, chicken pox, frosted comb, skin disease, sour crop or bowel trouble and it is so easy to use. Then too, Germozone has many

other uses about the home or farm as an antiseptic, germicide and fungicide, Large 12 oz. bottle 50 cts. Gallon bottle \$3.00.

There is one store in most every town where the Lee line is handled; at least there are 2,700 such towns in Nebraska, Kansas, Iowa, and Missouri, with 7,400 in other states. Any of our dealers will gladly give you full particulars and our free poultry books. *If you will write us, we will give you details by return post.*

**Geo. H. Lee Company**  
Omaha, Nebraska

### PRIZE OFFER

We are, this season, offering big cash prizes of \$100, \$50, etc., to followers of "the Lee way." If you contemplate any changes for next season, better get in line for one of these prizes. It means no extra effort. Arthur Meisinger of Peoria, Ill., won the \$100 prize last year. We give full particulars free.

### AUTUMN HINTS

Be sure to take your birds into the winter free from lice and with the house clear of mites. They will lay better and come into the next breeding season better. Then, too, you will not have trouble in the spring with lice on the young stock. It needs only a few minutes, occasionally, with Lee's Lice Killer.

The first chilly fall weather is generally more productive than mid-winter of colds, roup, bowel trouble or canker, especially if damp. Roup, or canker, once well started, may run all winter. Guard against this by giving Germozone in the drinking water twice a week as a preventive. Watch for the first watery eye or dirty beak; the first wheezing or coughing; the first unhealthy droppings (healthy droppings are firm, solid, slate colored, tipped with white). Always use Germozone on first indication of trouble.

# WHITE FAVEROLLES AND GOLDEN AND SILVER CAMPINES

The product of over 3,000 eggs raised on twenty-five farms. Great bargains for early buyers. One hundred cockerels for breeding at \$2 each.

AUG. D. ARNOLD

BOX 777

DILLSBURG, PENNSYLVANIA

# KAUP, QUALITY BUFF ORPINGTONS

Are prepared to win for you now and in any show later. Hundreds of magnificent birds now ready to carry off highest honors for you and make your "chicken business" profitable. Do you want to be as fortunate and get your share of the business the coming season as scores of my customers did the last season? My large 36-page beautifully illustrated catalog, "The Buff Orpington Guide Book" tells all about it—sent free for the asking. A small deposit will reserve your birds for you to be trained and shipped in the pink of condition just before your show. No extra charge for conditioning for your show and I prepay express anywhere on all exhibition birds of \$25 or over. A few 1912 hatched breeders still for sale at almost half price. Mention A. P. J.

F. A. KAUP, THE BUFF ORPINGTON SPECIALIST, DESK ONE, CHICAGO, ILLINOIS

# OUR LATEST WHITE ORPINGTON WINNINGS

At Indiana State Fair, first and second cock, first hen, first cockerel, second pullet and first pen. This with our previous winnings at National White Orpington Club Show, Indianapolis, National Fanciers Club and State Club Meets, is some proof. We can please you. Our advertising, mailed on request, gives full list of our winnings, describes our farm and gives views of our 800 birds on free range. Let us quote you on the right birds, that are raised right, with the breeding of 5 years back of them. Write now. Mention American Poultry Journal.

RALPH WOOLERY

BOX A

BLOOMINGTON, INDIANA

TO WIN at the Fall shows you must have the birds that have the quality to put themselves in the outstanding positions. MAPLE FARM OF MIDLOTHIAN has a large number of such birds fit to go in to any show in the country and win the coveted positions. Write us fully stating the size of the last show, the quality of birds exhibited and give us an approximate idea of what it is worth to win the show. We'll answer the same day telling you frankly whether or not we can help to fulfill your desires. OCTOBER SPECIAL—In order to make room for our pullets we have selected a few yearling utility breeders from our yards. Until disposed of we quote ten of these sterling birds and a Spring cockerel for \$25 f. o. b. Midlothian, Illinois. If you cannot come to select your birds, write quick to

Maple Farm of Midlothian Charles D. Ettinger, Prop. Walter A. Cook, Manager Box 105, Tinley Park, Illinois

# Barred Plymouth Rocks

Winners at Chicago—Indianapolis—Memphis—Louisville—Shelbyville

Indiana State Fair, Indianapolis, Ind., September, 1912, 1st Pullet, 1st Pen, 2nd Cock, 3rd Cockerel, 3rd Cock, 3rd Pullet. Get our wonderful list of winnings, proving the superiority of our Rocks.

COCKERELS—\$3.50, \$5.00, \$7.50; PULLETS—\$2.50, \$3.00, \$3.50

EXHIBITION BIRDS—\$15.00, \$20.00, \$25.00

INCUBATOR EGGS—\$1.50 per 15; \$7.50 per 100

We have on hand over 1900 early hatched stock, all raised

## Direct from Our Premium and Pedigree Pens

bred to perfection in color and barring—and we can furnish you birds that you cannot get elsewhere at three or four times the price we ask.

We furnish, perhaps, more winning exhibition birds to our customers than any breeders in America. Our moderate, honest prices secure us all the business we can take care of, and our fine, large, magnificently barred birds, absolutely guaranteed, carry off the blue for those who buy them.

Send us your order for any exhibition or breeding birds you may need. We are old reliable breeders, are Specialists in Barred Rocks, have bred them successfully for 22 long years, and with our unequalled facilities for hatching and raising our birds WE ARE ENABLED TO GIVE YOU SELECTION NO SMALL BREEDER CAN POSSIBLY GIVE. You will make a great mistake if you place order before getting our prices and literature. Send for catalogue No. 3.

## We Want to Send You Our New 1912 Poultry Book

The Most Practical, Helpful Book on Poultry Raising Published

A book used as a text book by leading Agricultural Colleges. A book poultry experts say is the best published. A book full of good things for beginners or experienced poultrymen.

120 Pages FREE—Postpaid

It is full of information gleaned from the successful experiences of the world's most prominent poultrymen

In addition there are articles on the Possibilities of poultry raising on the ordinary farm—which breeds are best—money-making methods of raising ducks—how to feed—breed—rear—market and hatch on a money-making scale. Contains scores of letters from leading poultrymen telling how they have succeeded—their secrets of success. No book like it. No book contains so many articles of actual, practical, successful poultry raising experiences.

**Write Your Name on a Postal** mail it today and insure getting a copy before the edition is exhausted.

Describes the 1913 Sand Tray Prairie State Incubators, Universal Hovers, Colony Houses, etc., which are revelations in artificial incubation machinery. Be sure to write for book today. Free—prepaid. [23]

The Largest Modern Mushroom Plant in the World

## Shorten the Moulting Period. Help your Hens NOW—Get Eggs All Winter

I can make *your* hens lay as many eggs this winter as they ever laid in the summer. I learned how to do it on my own poultry farm. Hens won't lay while moulting. Getting new feathers on your hens means lively, healthy chickens—laying hens.

My method of feeding has made money for hundreds of poultry keepers. It is fully explained in

## The Golden Egg

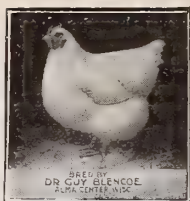

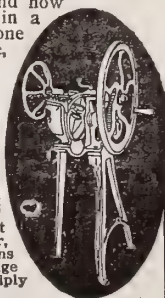

the greatest Egg-Making book ever published.

It tells how to get a quick, healthy, egg-laying recovery from the trying, profit-losing moulting time. It shows why and how fresh cut bone, prepared in a Humphrey Open Hopper Bone Cutter, makes bone, muscle, feathers and eggs.

If You Have 10 or More Hens

The Humphrey way will make them pay. You can get eggs for early setting—chickens for early March markets. "Learning costs," is expensive, but you can get this 48-page book of poultry helps for a cent. Just your name on a postcard; or, better still, write how many hens you have, what your egg average is, and I'll tell you how to multiply your egg income by five.

**HUMPHREY, White Street Factory, Joliet, Ill.**

## WHITE ORPINGTONS

Remarkable males. Superb hens. Grand show birds. Great breeders. March hatched youngsters. All bred from Chicago winners of the past three years.

**Dr. Guy Blencoe :: Alma Center, Wisconsin**

## Forty S. C. Black Orpingtons

Hens, \$2 each. Ten young cockerels and five one-year-old cock birds, \$5 each.

**Foster & Johnston, R. R. 7, Fort Wayne, Indiana**

You can enjoy the great pleasure of having large white eggs during the winter months and winning gold and silver specials in the show room if you breed

**Pape's Strain S. C.**

**BLACK MINORCAS**

Our Free Catalogue shows list of winnings.

**CHARLES G. PAPE, Box B74, FORT WAYNE, INDIANA**

As a table fowl their meat is juicy, tender and well flavored. If you are just starting an egg farm—want to improve your flock or want 1913 hatched or yearling show birds for any competition, write today. All stock sold on approval.

## DO YOU KNOW

Black Langshans won Australian egg laying contest two years in succession? Black Langshans stood second last year in the Missouri Egg Laying Contest? Black Langshans stand at the top as the highest average layers for ten months this year? Hewes Farm Prince Ebony Strain has swept the decks at all shows including Chicago and New York whenever shown. All firsts on males at Chicago for four years. Send time for catalogue and full information. Mention American Poultry Journal when writing.

# Aldrich White Orpingtons

## One Breed Bred Right

**I**F you wish to be successful in the poultry business, start with the **most popular and best paying variety**, the **S. C. White Orpington**. This variety is conceded by all to **lay the most eggs in winter**, to be the fastest growers, and the best table fowl, as well as being the most beautiful and the most easily handled of all chickens. The experienced fancier or breeder realizes that the best is the cheapest in the end, and buys his breeding stock in the fall, thus acclimating his birds and keeping them in perfect breeding condition to raise winners for the coming season.

**The Superior Quality of the Aldrich Strain Is Acknowledged by All to Be the Standard of the World**

Our strain is the result of the highest skill in breeding. At all the largest shows in this country this strain has won for ourselves and our customers, and if you can advertise the **Aldrich Strain** your success is assured, as people will know that **you have the best**. During the past three seasons that we have exhibited we have carried off 120 regular prizes and many specials at **America's greatest shows**, Chicago, Cleveland, Baltimore, Allentown, St. Louis, Atlanta, Augusta and Madison Square Garden, thus firmly establishing our claim as the **Quality White Orpington Farm of America**.

From our knowledge of the poultry business, we have no hesitation in affirming that our flock of young birds of this year contains the largest percentage of standard, **TYPICAL WHITE ORPINGTONS OF FULL WEIGHT FOR THEIR AGE**, and with the smallest percentage not fit for the show room, of any flock ever raised upon any White Orpington farm in the world, and we ask any person wishing to purchase such a class of stock to **VISIT OUR FARM** and either verify or disprove this assertion.

The youngsters are of full weight for their age, with strong and heavy bone, firm in comb, red of eye, pure red in lobe, without blue in leg, of the **finest Orpington type**, and with **plumage as pure white as the older white breeds**. They are bred from the **largest flock of prize winners of the leading shows of the last two years to be found in the world**, all mated upon scientific principles by our Superintendent, Mr. Len Rawnsley,

one of the most expert Orpington breeders of this or any other country, and reared under his supervision **upon a system unexcelled in producing vigorous and typical birds** for the show-room, and breeders to perpetuate the **finest types of the variety**. Every bird is reared and conditioned under his supervision and the personal care of the members of the firm, **who devote their whole time to the business**, and this in a great degree is the secret of our success.

The demand for show birds this season is enormous, and we have already booked orders for shows in all sections of America and Canada, so that if you **place your order early** we can give you a better selection, and can properly train the birds for the show room. Remember, **we only sell to one customer in a class at any show**, and that a small deposit now will reserve you the winners. Our birds are **bred to lay** with the same care they are bred to win.

If you need a **winner** or wish to **introduce new blood**, or want to get **started right** in White Orpingtons send for one of our 56 page catalogs, and let us quote you prices.

**ALDRICH POULTRY FARM, 5080 N. High St., Columbus, O.**

# AMERICAN POULTRY JOURNAL

Entered as Second-Class Matter August 9, 1886, at the Postoffice at Chicago, Ill., under Act of March 3, 1879.

Volume 44

Chicago, Ill., October, 1913

No. 10

## \$190 Worth of W. Orpingtons Given Away

First Prize Won by F. J. Rothplete, Second Prize Won by  
Jas. R. Brown, and Third Prize Won by Mrs. S. C. Jackson

**EDITOR'S NOTE:**—Through the courtesy and liberality of Mr. Louis Lee Haggin, proprietor of the Russell Cave Poultry Farm, Lexington, Ky., we were enabled to offer in the June and July issues, as premiums to subscribers of American Poultry Journal, a \$100.00 breeding pen, a \$50.00 trio and \$40.00 worth of eggs to those who could write the three best articles on "Ten Reasons Why the White Orpington Is the Best Utility Fowl."

The prizes to be awarded as follows:

To the subscriber of American Poultry Journal who writes the best article on above subject and forwards same to American Poultry Journal before August 1, 1913, will be awarded a \$100.00 breeding pen of Single Comb White Orpingtons, direct from the yards of Louis Lee Haggin, the great White Orpington specialist. To the one sending in the second best article will be awarded a \$50.00 trio of Single Comb White Orpingtons, direct from Mr. Haggin's yards and to the one sending in the third best article will be awarded \$40.00 worth of eggs from Mr. Haggin's best matings.

We are pleased to publish herewith the three winners, as follows: First prize, Mr. F. J. Rothplete; second prize, Mr. James R. Brown, and third prize, Mrs. S. C. Jackson.

The interest manifested in this contest was truly amazing, 94 articles being sent to us for competition. A large number of these articles were so good that it was a hard job for the judges to make a selection of the best three. The judges were Mr. Louis Lee Haggin, who—after reading all 94 articles—selected the best twenty, and Mr. James W. Bell, editor and Mr. Clarence Ward, assistant editor of the American Poultry Journal, who selected the three final lucky prize winners.

In making this liberal offer to our subscribers Mr. Haggin had only one object in view, and that was to create a greater interest in White Orpingtons and to impress upon the people of this country the good qualities of this truly great variety of fowl.

Attention is called to the fact that not one of the winners is now nor has been a display advertiser in the American Poultry Journal during the past year, thus proving the fairness of the awards. However, we received quite a number of articles for competition from some of our display advertisers, but all articles were judged strictly on their merits regardless of whether the contestant was an advertiser or only a subscriber.

We congratulate Messrs. Rothplete and Brown and Mrs. Jackson on winning these splendid prizes and wish them every success with their chosen breed which they so ably championed. We also wish to thank all the other contest-

ants who sent us articles and hope they will not cease in their efforts to help push and make the "White Orpington the best utility fowl."

### FIRST PRIZE ARTICLE.

Won by F. J. Rothplete, Birmingham, Ala.

The breeding of poultry was known a thousand years before the Christian Era, apparently all varieties having, as a common origin, the Gallus Bankiva, or Jungle fowl, of the Indies. The fighting qualities of the game cock won it a place in every part of the world, and when the Romans invaded Great Britain, Caesar records the finding there of game cocks which had been introduced by the Phoenicians, but, that the Britians seemed to have little or no knowledge of the fowl as a regular article of food.

China, where the supply of any kind of quadrupeds for food has ever been entirely inadequate to the necessities of the dense population, has for centuries consumed enormous quantities of poultry, mostly fowls and ducks. That much attention was there given to the development of the utilitarian side of poultry breeding is shown by the fact that most of the large modern breeds of fowl come from China; the Cochins, Brahas, Pootras, Shanghais, Langshans, etc. In all of these the close feathered, long necked and limbed, hawk headed, small bodied type of the fighting cock, as still shown in the Jungle fowl and modern game cock, was as far as possible eliminated, and large bodied, short necked and short limbed fowl, with quiet dispositions, "good feeders," show the regular development of the market fowl.

In Egypt too, for centuries, the raising of poultry as an article of food has been systematically conducted. Our modern incubator is only a modification, or elaboration on modern lines, of the hatching ovens of Egypt that date back of the Pharaohs. It would seem probable that the breeds now generally known as the Mediterraneans can trace their origin to Egyptian ancestry. This is a materialistic age. We still have our poultry fanciers, men and women, too, who breed poultry largely to gratify their love of the beautiful, or their ambition to excel others in the production of fine birds. The strife for supremacy in "points" has been carried to such an extreme that the more important features, from the utility point of view, have been either forgotten or disregarded. With "constant in-breeding to perpetuate this or that supposedly valuable "point" the prime factor in any line of breeding, constitutional vigor, has been in many breeds or strains largely lost. Productivity has been lessened and fertility reduced, and, while "fine feathers make fine birds" and the fine birds may please the eye of the fancier, they often

fall far short of that equally desirable feature, filling the breeders' pocket.

And yet, this reckless striving for fine points is unnecessary and it is well within the bounds of practicability to have a breed of fowl that possesses, in an eminent degree, points of real beauty and also equally valuable from the commercial utilitarian point of view. This has been done and today we have breeds that can gratify both the love of the beautiful and the need for practical, financial results.

And without detracting in the least from the merits of other breeds, the writer is compelled to give the palm to the grandest of all birds, the beautiful White Orpington, and gives

Ten Reasons Why the White Orpington is the Best Utility Fowl.

#### First: Constitutional Strength and Hardiness.

Constitutional strength and vigor is the first prime requisite. The perpetuation of the points upon which a breed bases its claims for supremacy depends absolutely upon the power of transmitting them unimpaired from one generation to another. No breed can excel the White Orpingtons on this point; few, if any, can equal them.

#### Second: Immunity from Climatic Changes.

Immunity from effects of climatic changes is an immediate result of constitutional strength and hardiness. Besides, the moderate size of the White Orpingtons' combs preserves them from injury by freezing in winter in the colder states, while their freedom from leg-feathering also saves them from troubles when on low, wet grounds. The breed has proven in every country where it has been introduced its wonderful adaptability to all climates and conditions.

#### Third: Fertility.

With strong constitutions and immunity from troubles from changes of climate, it naturally follows that the White Orpington excels in high rate of fertility. It is common to obtain from 85 to 95 per cent hatches with them.

#### Fourth: Productivity.

They excel in egg production. Whether in America, in Australia or in England, the White Orpington excels in average total annual egg production. In Australia, where the largest and most thorough egg-laying contests have been made, they lead all others. In the last completed contest, the leading pens were all White Orpingtons. The two highest pens averaging for every hen 252 and 241 eggs respectively each for twelve months. In the United States they hold the same position and especially during winter months.

#### Fifth: Excel as Winter Layers.

It is during the winter months, from October to April, that the market demand for eggs is the greatest, the normal supply the least and prices the highest; this is the season when the White Orpington is at its best, as all egg-laying contests show.

#### Sixth: Size and Quality of Eggs.

Eggs for market, to command the highest prices at any season, must be of the largest size, uniform in shape and color. Most of the breeds making big claims for egg production lay eggs ranging from  $1\frac{3}{4}$  to  $2\frac{1}{2}$  ounces, very few as high as  $2\frac{1}{2}$  ounces. The White Orpingtons lay eggs from  $2\frac{3}{4}$  to 3 ounces in weight, and very uniform in shape and in color. They are above the market standard and when, as is certain in the near future, eggs are graded in size or sold by weight, the White Orpingtons will have a tremendous advantage.

#### Seventh: Gentle Disposition.

They are very tame and gentle and easily kept in confined runs if necessary. From their disposition they are "good feeders," assimilating food easily, mature early, grow rapidly, and whether for the table or as layers, pay a larger profit, in less time, than any other breed.

#### Eighth: Good Mothers.

They are good setters, requiring no special attention, and take excellent care of their broods.

#### Ninth: Largest of Clean-Legged Fowl.

They are the largest of all the clean-legged breeds. At seven to eight weeks they produce soft broilers of two pounds weight; at six months they make splendid roasters of eight to ten pounds weight; caponized, at twelve months they make the choicest of fowl, weighing twelve to fifteen pounds. Their flesh, at all ages, is of the highest quality and flavor.

#### Tenth: Best and Most Profitable Breed.

Their pure white plumage and graceful shape make them fowls of rare beauty, and, added to the points of excellence enumerated above, not to be found combined in any other breed of fowl, make them the most sought for and popular, the easiest to sell, at the highest prices, and by far the most profitable breed of fowl ever known.

### SECOND PRIZE ARTICLE.

Won by James R. Brown, New Berlin, Ohio.

Firmly believing, through experience, the White Orpington to be the best utility fowl in the field, I take this opportunity to give my reasons in answer to the offer of Mr. Louis Lee Haggin, Russell Cave Poultry Farm, Lexington, Ky. to subscribers of the American Poultry Journal.

Utility is defined, "Fitness for some desirable practical purpose, serviceableness." The practical purposes for which poultry is kept are "Breeding," "Egg-Laying," and "Table-Use," and to these ends the White Orpington is utilized with the greatest satisfaction to all concerned.

There are reasons.

The great vigor and unequalled health which were qualities aimed at by the original promoters in the development of this new and excellent breed, was fundamental with Mr. Cook, who, through scientific knowledge and ability, has given us a very strong and healthy bird, the essential quality of a utility fowl. To the name of Mr. Cook we add Miss Carey, Mr. Louis Lee Haggin, Jackson, Byers, Brady, Aldrich and others who have given thought, time and money to the development and improvement of poultry, culminating in the splendid health and vigor of the White Orpington.

It is generally admitted that the White Orpingtons are prolific layers of large and beautifully tinted eggs. They will produce in winter when eggs market at the highest price. This is in harmony with facts shown in egg-laying contests in Australia as far back as 1903 and 1904. This splendid feature was also demonstrated in the United States at Storrs and Mountain Grove and this year in the month of February at Mountain Grove the pen of pullets owned by Mr. Louis Lee Haggin was awarded the silver cup for the laying of the largest number of eggs. While it is an honor to win the cup, it is perhaps a greater honor and satisfaction that the feat should be accomplished by White Orpingtons.

The White Orpingtons' table qualities are of an excellent grade. Their large frame with deep, full breast is covered with a large amount of the finest flavored meat and for this reason are rapidly crowding to the front for table use in place of the yellow-skinned older varieties. Their pearl-white skin and clean appearance on the market greatly adds to their demand and the people have learned by the test of taste that this skin covers flesh well flavored, tender and juicy, the peer, if not superior to that covered by the yellow skin varieties.

As a market fowl they stand high and are unsurpassed as broilers or roasters. Dealers find the demand increasing for the White Orpingtons as a market fowl wherever known. They are noted for their well-shaped and deep bodies with their full broad breasts bearing almost as much white meat as a turkey. The chicks develop rapidly and will grow more ounces in a given time than almost any other variety. Through this early maturity they are ready for the market with more weight, better meat and quicker returns than found in any other breed.

They are adaptable to the varied climate conditions of the world. They thrive equally well throughout the entire continent, for from Maine and the cold New England

hills to the balmy air of the sunny South you will hear their praises sung. Reports from the lowlands of Holland and Belgium, the mountains of Switzerland, Norway and Sweden in the North and from South Africa, bear testimony of their popularity in other lands. Denmark has established a breeding center where White Orpingtons are exclusively kept for distribution, having the special object in view of improving winter laying for the English markets. Why this world-wide popularity of White Orpingtons? Because of their absolutely superior "Utility Qualities."

Their adaptability to environment is shown in the fact that they thrive equally well in the small yard or on the free range. Hundreds of breeders recommend them as the embodiment of perfection in yarded fowls and Mr. Philo, having adopted them under his intensive system with great satisfaction, recommends them very highly as utility fowls. So, whether in yard or free range, the White Orpingtons are adapted to the environment with equal success.

They show strong instinct in their reproductive qualities. They lay well throughout fall and winter and become "broody" early in the year. They are excellent setters and good at mothering chicks, but where incubators are used and not needed for this purpose, they are easy to break off. To my observation they breed true to type, that is, if stock is good you get good results and will find fewer occasions where they do not breed to type than any other fowl.

The White Orpington is one of the most docile, tame and easily handled of fowls. Where yarding is necessary, a four foot fence is all that is needed, yet you find them very industrious in yard or pen and when given free range they are the best of foragers.

From a beauty standpoint, the White Orpington is universally acknowledged to be beautiful and pleasing to the eye for there is always that attractive appearance and perfect symmetry which places them second to none as birds of beauty, whether in show-room or on the farm.

From a monetary standpoint they are the best utility fowl known. Never were such high prices paid for fowls before the advent of the White Orpington. To be convinced of this, look up the price lists of some of the leading breeders of the day and note through comparison the much higher prices asked than that of other breeds.

In conclusion, my ten reasons why the White Orpington is the best Utility Fowl, are briefly as follows:

1st—Health and Vigor. 2nd—Egg-laying Quality. 3rd—Table Qualities. 4th—General Purpose as Market Fowls. 5th—Adaptability to Climate. 6th—Adaptability to Environment. 7th—Instinct of Reproduction. 8th—Docility. 9th—Beauty. 10th—Monetary Value.

### THIRD PRIZE ARTICLE.

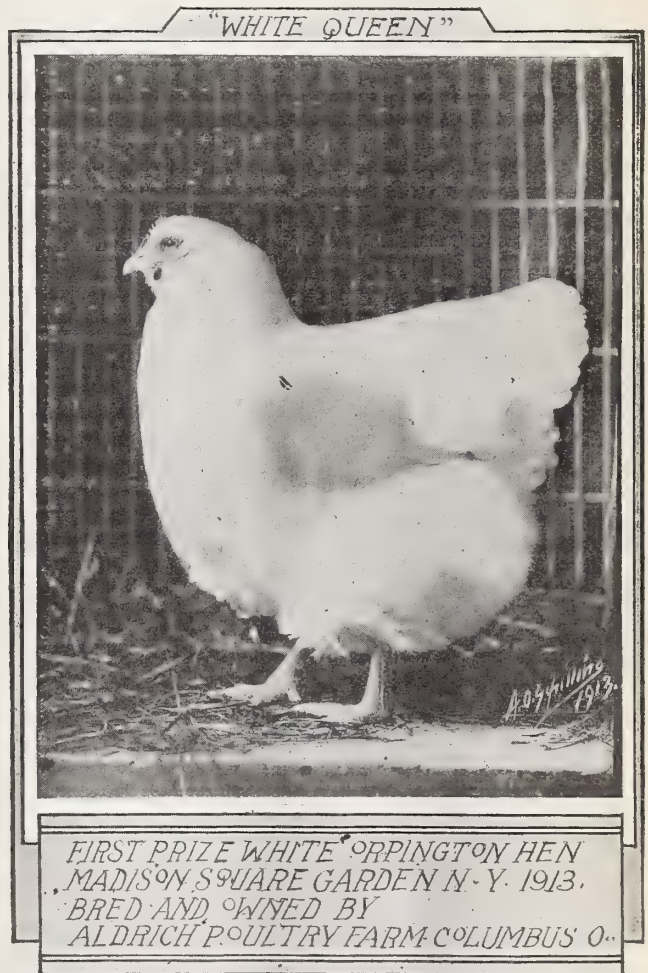

Won by Mrs. S. C. Jackson, Fort Worth, Texas.

1st. In the first place, what seems to me to be one of the most—if not the most important qualifications to be desired in a fowl for general utility use, is the matter of size. This is especially true if one intends marketing broilers, fryers, and the full grown fowls for eating purposes. A fine, plump fowl will not only bring in more money when sold, either by the pound, or so much a head, but will also show up much better and look more attractive, and in this way build up a demand among your customers for this breed of fowls. The White Orpington from the start, is a large bird, being one of the largest fowls raised, and weighing, when full grown, all the way from seven to eleven, and even twelve pounds. Naturally, a bird of this size will sell to much better advantage than one of the same age and height, but without much flesh on their frame.

2nd. In this same connection may be mentioned the superior eating qualities of this fowl, as the meat is of very delicate, delicious flavor, and is one of the most satisfactory for this reason. In contemplating raising poultry for market, this is a matter not to be overlooked, as quite a demand may be created on the score of fineness of the meat, and general delicacy of flavor.

3rd. Of scarcely less importance to a poultry raiser who is in the business for profit, is the length of time required before the birds are ready for market. Time is a most important consideration, as a dealer or raiser who can get his wares on the market a few weeks ahead of his competitors, stands a good show of holding his trade throughout the season, and is very likely to be remembered the following spring as one on whom to depend for early broilers. The White Orpingtons on account of their rapid growth, make earlier broilers, being ready for market long before other varieties hatched at the same time are large enough.

4th. Of paramount importance to the quality and desirability of the White Orpington for eating purposes, is its splendid laying qualities, as a raiser intending to market eggs, not only wishes quantity, but quality, which embraces size and flavor, and also wishes his poultry to arrive at the egg-producing stage as early as possible. The White

Orpington possesses in no small measure all of the above requirements, perhaps the most important being the length of time required to arrive at the age for laying. This is a valuable point to a poultry raiser, who can count on his young White Orpington pullets beginning to lay within about four months from the time of hatching, and in this way he loses very little time in waiting to begin marketing the eggs.

5th. The White Orpington hen, from the time of beginning to lay, is a steady, constant layer, producing more eggs in a given length of time than any other breed of fowls, and seemingly unaffected by any conditions that cause the supply of eggs to suddenly diminish, and wreck havoc with a poultry raiser's plans and contracts. The wise fancier who wishes a steady, continuous, and liberal supply of eggs on which he can count, and make contracts with his customers, will not fail to put in the White Orpington, as their qualities in this direction are unexcelled. The eggs are not only numerous, but not lacking in quality and size, as so often is the case when large numbers are

produced. The eggs are large, fine shape and size, and of a rich, delicious flavor, which will certainly create and hold a trade, which will stay with you and demand the White Orpington eggs.

6th. In this same connection, and of equal importance to the poultry raiser, may be mentioned the fact that the White Orpington hen loses no time after setting, but begins laying again in record time. In about six weeks from setting time the hen is again to be counted on for her regular quota of eggs. This is unusual, and of great value to any one marketing eggs.

7th. One point of which mention has been made already in a general way, or at least having a bearing on the qualifications previously treated, is the fact that the White Orpingtons mature earlier than other varieties, thus being ready for mating and breeding while still quite young. The eggs from their first pens contain a very large percentage of fertile eggs.

8th. Of scarcely less importance than what has already been mentioned, is the fact that the White Orpington is one of the healthiest fowls known, requiring little attention beyond the ordinary precautions of cleanliness,

proper protection from the weather, and correct rations, which every modern and intelligent poultry raiser understands. The young chicks are bright and active, and continue to be active and healthy—of course under ordinarily favorable conditions. This is an important factor in considering the breed to put in, as a healthy fowl is always a good recommendation of one's yards, as well as being a source of great satisfaction to the poultry raiser himself.

9th. As a contributing agent to the last mentioned qualification, may be stated the fact that the White Orpingtons are great rustlers for food. This keeps them healthy and lively, and is of value to a poultry raiser, especially where there is a place of any size for them to run and scratch. They keep busy, and consequently are never lazy or sluggish.

10th. In summarizing will say that the White Orpington is the best all around fowl on the market, having so many sterling qualities, and with few—if any—drawbacks. There is nothing lacking of the qualities which go to make up a desirable fowl for table, market, or breeding purposes which are the three objects for which fowls are raised.

Therefore, the White Orpington is the best utility fowl on the market for all uses, which I have tried.

## Weismann and Mendel Interpretations

If Those Qualities Alone Are Inherited Which Are Innate in the Germ Cells, Where Do They Get Them?

By H. H. Stoddard, Riviera, Texas

ARE the microscopic reproductive creatures, the ovum and the spermatozoon (also called female gamete and male gamete) the preeminent foundation of race characteristics of animals,—are they the prime movers, so to speak? Or are adult animals (or those developed to the age of puberty) in which the gametes are found, the real racial foundation? In other words, do the parents bestow specific characters upon the gametes their bodies hold, and so are the real race foundation; or do the gametes give specific qualities to the grown animals developed from them? Or are both these propositions true

by turns, the parents deriving their characters from the gametes from which they sprang and their giving their characters (more or less modified) to the respective gametes (ova and spermatazoa) within them, which determine the characters of a another generation of parents, to give character to new gametes, to give character to the next generation of parents, and so on, and on?

Listen to one prominent spokesman:

"Until the publication of Weismann's work it had been generally accepted that the modifications brought about in the individual during its life time, through the varying conditions of nutrition and environment could be transmitted to the offspring. In this, biologists were but following Darwin, who held that the changes in the parent resulting from increased use or disuse of any part or organ were passed on to the children. Weismann's theory involved the conception of a sharp cleavage between the general body tissues or somatoplasm and the reproductive glands or germplasm. The individual was merely a carrier for the essential germplasm whose properties had been determined long before he was capable of leading a separate existence."

To make the quotation plainer, the spermatozoon according to Weismann is composed of a kind of plasm that carries a sort of influence (comparable to magnetism) that in some way reaches all the spermatozoa of the next generation and determines their character and this independent of the character of the individual parent of said generation. I said comparable to magnetism, but by this I mean only comparable in the mysterious unknown methods of transmission. Just as one piece of magnetized metal can transmit magnetism to another, which can in turn trans-

mit to another and so on; Weismann taught that all the traits that are hereditary were brought down from one spermatozoon (or ovum) to its descendant of the next generation uninfluenced by the individual animal in which the spermatozoon or ovum temporarily dwelt. In short, two tiny gametes virtually constructed the individual though as large as an elephant, from beginning to maturity, (by the help of outside supply of nutriment) and gave it shape, size, color and all its racial and specific characters and traits even to an expression of countenance or peculiar gesture or mannerism of any kind. But wonderful to relate, the individual gives nothing to the tiny gamete that it did not have before, to be passed on to the next generation! The individuals inherit their whole essential character from the gametes; but the gametes inherit nothing from the individuals.

So say some of the followers of Weismann and interpreters of Mendelism. Prof. R. C. Punnett, regarding the human race writes:

"At the moment of union of two gametes (spermatozoon and ovum) is decided the character of another zygote (fertilized cell, from which the embryo proceeds; the term zygote also covers the young animal developed from the embryo and the same animal in youth and maturity) as well as the nature of the population of gametes which must make its home within him. The union once affected, the inevitable sequence takes its course, and whether it be good or whether it be evil, we, the zygotes, have no longer power to alter it. We are in the hands of the gametes; yet not entirely. For though we can not influence their behavior, we can nevertheless control their unions if we choose to do so. By regulating their marriages, by encouraging the desirable to come together, and by keeping the undesirable apart we could go far towards ridding the world of the squalor and the misery that come through disease and weakness and vice. But before we can be prepared to act, except perhaps, in the simplest cases, we must learn far more about them. At present we are woefully ignorant of much, though we do know that full knowledge is largely a matter of time and means. One day we shall have it, and the day may be nearer than most suspect.

"Whether we make use of it will depend in great measure upon whether we are prepared to recognize facts, and to modify some of the conventions which we have become accustomed to regard as the foundations of our social life. Whatever be the outcome, there can be little doubt that the future of our civilization, perhaps even the possibility of a

future at all, is wrapped up with the recognition we accord to those who live unseen and inarticulate within us—the fateful race of gametes so irrevocably bound to us by that closest of all ties, heredity.”

That poets are born not made, and that orators, scholars, musicians, artists, skillful workmen, and people of ability of every sort are on the same list, was known before Weismann, Mendel and de Vries, and even Darwin wrote or thought “Chip of the old block,” or its equivalent, appears in the proverbs of all nations and was inscribed on the bricks of Egypt and Babylonia ten thousand years ago. Most certainly the essential nature of every human being is fixed even before birth. It is stamped when the spermatazoon enters the ovum and the twain are made one. From fertilized ovum through all the stages of the developing embryo to birth, the real character of the child is fixed, and no sort of environment or amount of training or education can do anything more than to develop that which is before education begins. This fact was known before Weismann was born.

But the proposition that both male and female gametes carry bundles of ancestral influences, and that two gametes when united form the essential character of the new individual, is a different thing from the proposition that the life experiences of this individual cannot in any way modify the next generation of gametes, that are living, growing and multiplying within his body during fourteen years or more.

That untold millions of characteristics are held in a race of animals in a latent or potential condition for generation after generation, without cropping out at all so far as can be discovered, and that when spermatazoon and ovum (that is male and female gamete) unite to form one cell which is the starting for an adult animal; there is a sorting out and new combination of traits, so that the next individual is different from any which ever existed previously in all the interminable past ages, was known before Mendel's time. He discovered an orderly and precise manner previously unknown in which the sorting and combinations occur—that is all. For instance the color of people's eyes is inherited in the following manner: When both parents have blue eyes all the children have blue eyes. If both parents have brown eyes all the children may have brown eyes or one-fourth of them may have blue, the latter inheriting from a grandparent. When one parent has brown eyes and the other blue, either all the children will have brown eyes or half will have blue. Not thousands but numbers incomprehensible of physical, mental, and moral traits are transmitted, or skipped, in the same orderly manner as the color of eyes. The facts of transmission and skipping, and that the microscopical fertilized single cell is the transmitter were known before Mendelism was in vogue. The orderly manner was, however, unknown.

The belief prevalent previous to Mendel's day that the gametes are modified as regards their heritable qualities, by successive generations of animals in whose bodies they dwell, is perfectly compatible with his discoveries. Yet thus far most Mendelists have contended very strenuously that while gametes transmit traits to an animal, yet the animal cannot transmit anything heritable to gametes, or influence them in any way except as they may be boarded and lodged a little better or worse while entertained by their hosts.

But the world do move and later Mendelists are arguing substantially as follows:

The earlier disciples of Mendel have been intemperate. Professors and authors have magnified their own importance. Like politicians when election returns are not all in, they have claimed everything. Discovery of the orderly scheme by which, as Mendel has shown heredity proceeds in the reproductive organs and their products, and in the marvelous fertilized cell, does not necessarily upset the gist of the old Darwinian doctrine. Rather it expands and confirms it. Darwinism boiled down, is simply that through descent with modification, old species are transformed into new ones and generally gradually. He insisted that through prepotency, atavism and the sudden jumps as startling strange combinations of remote ancestral characters, sports appeared which sometimes transmitted their peculiarities strongly and helped to form new species.

He would have eagerly welcomed as reinforcing his position, both de Vries with his discovery of wonderful leaps

in heredity, and Mendel with his showing how in fertilization the apparent hit or miss struggle of a host of factors could be resolved into an orderly weaving together of warp and woof comprising factors towards which nature had mysterious preference.

Gametes must change from generation to generation or there can be no evolution, and all followers of Weismann, Mendel and de Vries of whatever school, are strict evolutionists. Now what causes the gametes to change?

Dr. Pearl says, “Those qualities alone are inherited which are innate in the germ cells, the ovum and the spermatazoon.”

But—and a big but—where do the germ cells get the “qualities”? The geneticists have been telling us that they inherited them from previous germ cells. Not from animals, in their embryonic stage, or their childhood, youth, maturity, or any other stage. The animal with all its “parts and passions” dies and dissolves. Not a trait, physical, mental, moral, or spiritual, did it ever send or could send by germ cells or any other carrier to future generations, so we have been told. Where did the previous germ cells get the “qualities” Dr. Pearl tells about? We are re-

Unretouched picture of Single Comb White Leghorn Cockerel, showing type bred by Eugene C. Smith, 317 Galena Boulevard, Aurora, Illinois.

minded of the Hindoos who say the world is supported by a big tortoise which stands on the back of a big elephant but what the elephant stands on they have never learned.

It is curious to see the manner in which the question where and how the gametes get the qualities they bestow, is dodged. Thus, Prof. Punnet says: “We now regard it (the individual animal) as an organism built up of definite characters superimposed on a basis (the gametes) beyond which for the moment our analysis will not take us.” This amounts to saying “nobody at present can tell where the gametes procure the traits they carry,” yet Prof. Punnet claims that it is known that they are not originally procured from the animals they live in, and surely he must claim too that they are not procured directly from the outside world of earth and air and water and living things. These cannot affect them at all except as indirectly they afford, through the blood stream of the host, material substance to enable them to grow and multiply. Negative knowledge lies around in big hunks, but positive knowledge in this particular matter is nil, according to the earlier Mendelian writers.

But after discussion has sufficiently simmered down, it will have to be acknowledged that animals certainly transmit heritable qualities to the gametes their bodies hold.

Birds on islands supposedly never previously visited by man, Darwin found out by personal experience, when voy-

aging "in His Majesty's ship the Beagle," would alight on his shoulders, and also would drink from a pitcher in his hand. Experience with boat's crews on such islands leads to a fear of man by the birds that is transmitted by their young and evinced when they have never before seen a man. The fear the adults experienced was, in a latent or potential form, bestowed upon spermatozoon and ovum and thence passed to the fertilized egg from which a young bird is hatched which inherits the same instinctive fear of man that it feels toward hawks or like enemies, and which its race has felt for ages.

Every instinctive love and hate any race of animals possesses, began in experience of individual zygotes. Gametes can have no primal experience of anything at all which is environmental to individuals, for the gametes are hidden in the individual's bodies and exempt from direct influence of the outside world. The environment of the gametes is

FIRST PRIZE S.C. BUFF ORPINGTON COCKEREL AT  
MADISON SQUARE GARDEN N.Y. 1912-13.

Wm. COOK & SONS SCOTCH PLAINS N.J.  
ORIGINATORS OF ALL THE ORPINGTONS.

the individual it lives in. The environment of the individual is the world it lives in.

The gamete is influenced by only two things, namely, heredity and environment, and the individual is influenced by only two things, namely, heredity and environment.

The love of a particular sort of food and aversion to some other sorts is transmitted in a latent form by gametes but they do not eat at least not with mouths, and therefore the individual had to have gustatory experience in the first place or gametes would have no latent gustatory predilection nor repugnance to carry to the next generation.

Species can change as time rolls on only as gametes change and gametes change as the zygotes (individuals) which are their hosts, change. The hosts change through effects of their environment and this change effects the gametes that board and lodge and propagate their kind within them. The changes are usually not marked or sudden, however, or there would be no temporary apparent fixity of species, but chaos would reign.

"Nothing is constant but change." Among the myriads of cells innumerable as the stars of heaven that are in the

body of the parent and necessary before there can be a speck of protoplasm called a gamete, not one of these cells is like any other.

There is a continual process of differentiation and specialization going on, no cell can possibly be exactly like its predecessor, which died (as an individual creature) that it might leave two descendants which are not exactly like each other or exactly like any cell that ever lived or ever will.

Mendelism, or the new genetics, or whatever it may be called, offers at its present stage, no new practicable instructions for mating and breeding either the lower animals or humans. The professors who say that the old rule of "breeding from the best to get the best," is no good; turn right around and prescribe methods that amount to the same thing. In May issue page 847, last part of column one, I showed how the breeder seeking high fecundity of fowls by whatever light the study of Mendelian laws has given, down to date; simply culls the best from which to produce the best in essentially the same way that has been practised in the past. And turning to the human species, the young man who has never heard of Mendel's discoveries but is anxious to mate with a partner likely to present him with children physically, mentally and morally admirable, must simply seek to wed an admirable woman of a good family, i. e., good so far back as it can be traced.

It should be noted that when the importance of eugenics becomes known to legislators, the public archives will contain records of a great many things besides merely dates of marriages, births and deaths. Teachers, vocationers, physicians, expert alienists and psychologists, all these, empowered as officers of the law, will add to the records complete life statistics of every citizen of the republic from birth to death. What? Shall records of the qualities of race horses, cows, and hogs even, be kept, while in ordinary cases not a blessed thing is known about a human being's great grandparents, their temperament, disposition, intellectual parts, physique, customary degree of health, not even their stature and complexion?

The information given by such records, interpreted by the better understanding of the laws of heredity that is sure to come, will make the achievement of scientific marriage much more feasible by and by than it is at present, "a consummation devoutly to be wished."

The whole problem offered by Mendel's discovery, one of the most important as well as wonderful, in the annals of science, is such a complicated one that it will take generations to solve it, and at present the breeders of domestic animals, in common with the school of Eugenists who, seeking for definite knowledge regarding marriage unions likely to result in children of desirable sort, can derive little benefit or none at all from all that Mendelism can offer—in its present stage of development.

The president of the American Breeder's Association in his address before that body on his retiring from office January last, as reported in Farm Poultry, July 13th, page 156, recounted what had been accomplished through Mendelism to assist live stock breeders. After a laborious attempt to make a good showing, the "lame and impotent conclusion" appeared to be that the benefits to practical breeders amount at present to almost nothing at all.

All the above statements are from the newer Mendelians, not from the older, who say the newer claim too much. The wise investigator will probably wait till the differences between the new school and the old have been threshed out. Meanwhile the new school may derive solid comfort from the utterances of Sir William Ramsay, K. C. B., F. R. S., late as 1913, an authority of international fame, as follows:

"We cannot but be struck with the extraordinary fact that the resemblance of a child to his grandfather, not only in feature but also in mind and in trivial habits, involves the existence of cells in the father or mother, which 'lie low,' and yet carry with them all the characteristics of body and mind of a man or woman. Let us consider how subtle such a resemblance may be. It is certain that music as it effects us moderns is a comparatively recent art. We are safe in saying that a thousand years ago nothing like a modern sonata was dreamt of; the inhabitants of the East do not appreciate harmony; at all events harmony

is not part of their native music. Now it is not infrequent for a child to be born a "musical genius;" at the age of three or four, some exceptional children appreciate complicated music and even perform complicated and difficult pieces. This must have been inherited, but the faculty of appreciating complex music cannot date back more than say a thousand years; it would appear then, that the germ is influenced by its surroundings, as well as by its ancestors. But I have here touched the fringe of a dispute on which opinion is much divided. (Yes there are the new and the old Mendelists.)

"Like physical characteristics, memory is also capable of transmission, the son often inherits a good memory from his father. But it has been said, for example, in that interesting book, 'The Soul of a People' in which the life of the inhabitants of Burmah is described, that cases are known where a child, born of parents living in a village, not their own, to which they had migrated, was able to recognize people and to 'remember' events which had taken

place in the native village of his parents, of which he could have had no direct knowledge. Is it possible that a memory for particular events is sometimes inherited?

"That memory of coordination gained by the parents can be inherited by the offspring admits of no doubt. In his book on 'Animal Intelligence' Professor Lloyd Morgan describes observation which he made on swallows. Their nest was under the eaves, and for long the parents fed and attended to their young brood. The day arrived for them to leave the nest; and without any practise each fledgling dropped out of the nest, flew backwards and forwards, and without the least hesitation, entered the nest, just like an old bird.

"The wonderful power of control of muscles, of guiding motion and of correlation of brain and eye must have lain in the germ of these birds, until the time for their use arrived. Examples of the sort might be given by the thousand; although the one mentioned is perhaps particularly striking."

## The "Day-Old" Chick Business

Custom Hatching Is Here to Stay. It Will Help, Not Injure, Other Branches of Poultry Husbandry.

By Prince T. Woods, M. D.

IN SEPTEMBER American Poultry Journal we published an editorial on "Day-Old Chicks," commenting on discussion of the subject occurring during the closing hours of the Atlantic City Convention of the A. P. A.

In the September Inland Poultry Journal we find the following editorial in which Editor Theo. Hewes joins the crusade against custom hatching:

"Custom Hatching Should Be a Local Business.

"We are convinced that the shipping of day-old chicks for more than very short distances is an inhumane practice and that buyers of chicks so shipped frequently fail to get their money's worth.

"Some few years ago when the baby-chick business was new in this country we were as interested in its development as most others. Having no experience of our own as a guide we were obliged to appeal for information concerning the success attending shipments of baby-chicks to those poultrymen who were inaugurating this new industry in America. The information received was glowing and enthusiastic concerning the possibilities of the business and invariably comprised the assurance that complaints received from investors in baby-chicks were few and inconsequential. These statements we accepted and for a while were content; but information has been coming to us insistently and without solicitation that the day old chick business is not the success that its promoters would have us believe. Breeders in a position to render impartial verdicts have not hesitated to say that the day old chick business is unsatisfactory, both to themselves and their customers; that replacements of chicks are necessary in so many cases that they have come to regard it as the regular sequel to a baby-chick shipment; and that even those chicks which reach their destination in apparent good condition are frequently subjects of high mortality and of ailments which permit few of the chicks to attain creditable maturity.

"Fairness to the men who are engaged in shipping baby-chicks necessitate the admission that concerning those who have advertised in our columns we have received very few complaints, and these few have been promptly cared for. We have no doubts, however, that these men have received many themselves and have stirred themselves to silence all complainants, knowing that it is only the neglected kicker that appeals to the editor. And there is another and more potent reason why the day-old chick business has run along with so little outside evidence of dissatisfaction. That reason is the shippers of day-old chicks live up to their

guarantee and by so doing silence a would-be complainant by reminding him that they have lived up to the full letter of their agreement.

"The baby-chick man guarantees full count on arrival. He includes in practically every shipment some extra chicks to replace those that he thinks may die during shipment. Thus the buyer who has ordered fifty chicks may find himself in possession in due time of fifty-one or fifty-two live chicks and half a dozen dead ones. The buyer is pleased. He has fifty or more chicks alive and most of them apparently in good condition. He writes the shipper a fine letter telling him how pleased he is and then returns home to watch his chicks during the subsequent weeks drop off one by one until he has left from his fifty only a handful of scrawny, scrubby, ill-looking specimens to show for his venture in the poultry business. He may not suspect the real cause of his trouble, thinking, perhaps, that his care and feeding were at fault. He concludes that the poultry business is not for him and unless disillusioned is another of those who say that the poultry business is best left alone.

"Now the truth of the case is that a day-old chick cannot be confined for one, two or three days in a small box and be subjected to the conditions of privation and discomfort that are enforced on baby-chicks in transit and not suffer from the ordeal.

"Such treatment accorded to baby-chicks in the breeders' yards would be expected to result in practical annihilation of the brood and there is no reason for supposing that the consequence should not be fully as serious for chicks in transit. Baby-chicks will survive for days and weeks after having been subjected to exposure known to be serious, and so will survive a journey of many miles only to succumb later to the consequences of their trip.

"It is possible we hope to develop large local business in custom hatching. This seems to us the proper field for such business. Conditions must change greatly to permit of successful long-distance shipments being common, and by long-distance shipments we mean all requiring more than a few hours from shipper to purchaser.

"It seems evident that those who wish to make a beginning with poultry will do much better to purchase eggs and hatch their chicks on their own premises unless they can be secured locally where they may be carried home under the careful eye of their new owner."—(Theo. Hewes in Inland Poultry Journal).

The above quoted editorial surprised us. We thought Mr. Hewes knew more about chick rearing and more about custom hatched chicks than the editorial would indicate. We also would expect to see a bigger and broader view of the subject and less prejudice in evidence in the handling

of it. We believe that Mr. Hewes and others who have taken up the fight against the day-old chick business are on the wrong side of the fence and that they would do much better to climb over the fence again and boost for a bigger and better day-old chick business and try to remedy any evils which may exist. It is a whole lot better to build up than to tear down. If you must tear down, at least try to put something better in place of that which you destroy.

We have been handling "information bureau" and complaint or inquiry correspondence in the poultry field for a good many years and there isn't a single other branch of the poultry business, or of several live stock businesses that we have not heard countless complaints urged similar to those which Mr. Hewes lays at the door of the day-old chick business. And it will be noted that he has to admit that the "business has run along with so little outside evidence of dissatisfaction." Personally we can number the complaints we have ever received about day-old

the middle of August. He operates 52 incubators having a total capacity of 20,280 eggs at one sitting. He tells us that he averages about 250 chicks to the 390 eggs set. His biggest hatches have yielded him 300 chicks from 390 eggs and his lowest hatches have not fallen below 200 chicks from 390 eggs. He gives the selection and care of eggs prior to hatching and the eggs during incubation the most careful and constant attention.

We looked through a big pile of correspondence and in many cases we found reports of satisfaction on the part of purchasers as far north as New Brunswick and south to Maryland. Chicks were reported as arriving in fine condition. In many cases there was no mortality during transit. Many customers were purchasing again because pleased with the results of previous purchases and many reported fine growth and development with very few losses. No, we didn't go there to find only the rosy side of the business and we probed deep into the trouble end of the business. We found complaints very few. Where we found complaints the trouble occurred during transit. In most cases the express agents had allowed the chicks to be smothered. In a few cases the boxes had been opened by some kindly disposed but misguided attendant who had fed the chicks during transit and so through mistaken kindness caused loss and death. Mr. Keith told us that he believed that the total loss of chicks for the entire season due to transportation or other causes during shipment did not exceed two per cent of the chicks hatched. That of course was only a good guess, as there must have been many shipments from which he never had a report, but we believe it is not far out of the way.

Losses during shipment were naturally heaviest in hot weather, yet many shipments went through with no loss at all. He turned over to us the receiving clerk's statement for two years, (statements which accompany check in payment for live chicks sold at wholesale to a big supply house) and these records were complete in matter of report on condition of chicks on arrival and number dead. Shipments of January and December hatched chicks did not show the loss of a single chick. Out of eighteen thousand chicks shipped to this firm in one season the loss did not exceed an average of  $2\frac{1}{4}$  per cent. Out of 1,320 day-old ducklings shipped to one customer the loss was only 43 dead or about  $3\frac{1}{2}$  per cent. As everybody knows baby ducklings are about the most timid creatures on earth and are easily scared to death, so much so in fact that visitors are not welcome on plants growing ducklings in large numbers.

Some time ago R. C. Caldwell, of Lyndon, Ohio, furnished us with the information that he had successfully landed a shipment of day-old chicks in Mexico City, Old Mexico, which is 4000 miles from his hatchery. One shipment was on the road three days and nights and made seven express transfers and every chick was alive and well on arrival. Mr. Caldwell assured us that the loss rarely exceeds two per cent and that chicks can be shipped with entire safety up to fifteen hundred miles express journey.

All successful custom hatchers with whom we have talked agree that "day-old" chicks can be shipped with entire safety under ordinary transportation conditions an express journey not to exceed three days. They also call attention to the fact that, as a rule, newly hatched chicks are better off if not fed for the first 72 hours immediately following hatching, even when kept at home. It is necessary to get newly hatched chicks to destination during this first 72 hour period. They should be shipped just as soon as they are dry, ordinarily, and for long distance shipments may well be shipped before completely dry. Bear in mind that newly hatched chicks are better off without food or fussy attention for the first one, two or three days immediately following hatching, that they will go 72 hours without food without any injury or hardship, and that in a sensible shipping package they are often better off and more comfortable than they would be in an incubator nursery or in some anxious individual's brooder.

Personally, we have had quite a little experience with "day-old" chicks. We began buying when we lived in Salem, Mass., in 1894, or thereabout. With only a very few exceptions we have always had excellent results from pur-

BEAU BRUMMEL

First Prize Pen Cock, New York, 1911. Owned by The Willows Farm, Oscar Luedke, manager, Lock Box 488, South Bend, Indiana.

chicks on the fingers of one hand and we can't make that statement concerning other lines.

When we finished reading Mr. Hewes editorial, we drove over to the custom hatching plant of F. S. Keith, Easton, Mass., and took the magazine along with us and also a report of the attempt at Atlantic City to pass a resolution condemning day-old chick business as cruel, tending to disseminate disease and causing loss of vitality. We knew Mr. Keith would be interested and that he would talk freely with us about his day-old chick business.

Like most poultrymen who have grown up with their business, Mr. Keith does not employ a carefully detailed system of bookkeeping and filing and it was difficult to procure such data as we most desired, but he turned his memoranda, correspondence and shipment statements over to us for inspection without restriction and further assisted us with answers to all the questions we asked.

He custom hatches chickens, turkeys, ducks, geese and guinea fowls, and as near as we could estimate from such data as he had at hand he had, between December 11th, 1912, and September 4th, 1913, hatched and sold of all kinds a grand total of one hundred thousand. In the season of 1912 his shipments began February 1st and ended

chased chicks. In 1911 we had, we recall, one shipment of 200 White Rock chicks, received in a late April snow storm. They came a two day and one night journey, owing to delay in transit, and the top of carrier had been broken open so that the chicks were wet with snow on arrival. They had good care and as we recall it we lost only two of them, some were killed off as broilers and a few were stolen, but we brought some 175 to maturity and had over 100 pullets in the lot. A. F. Hunter, who certainly knows a good healthy chicken when he sees one, told us that fall that those White Rocks were the best he had seen that season. Out of some 1,500 day-old chicks which we purchased in one season we did not have losses from transportation and rearing included to exceed five per cent and in some cases we reared 100 per cent. Some lots of chicks came anywhere from 12 to 48 hours journey without the loss of a chick. We believe thoroughly in custom hatching and shall not hesitate to purchase chicks from points 72 hours express journey distant. Our only concern is that the man who hatches shall know his business and use eggs out of sound stock for his hatching operations.

might be considered in very good condition. Day-old chicks didn't have anything to do with that and they have nothing to do with your own disappointment, don't try to put the blame on an innocent and desirable branch of the business.

We are in some doubt as to the precise meaning of Mr. Hewes use of the word "inhumane." We presume he means to endorse the claims of cruelty in handling day-old chicks. Now let's not be foolish and maudlin silly in this matter. It is easy to stir up trouble and once stirred up it is sometimes difficult to quiet it down again. There isn't any cruelty in the proper handling and shipping of day-old chicks. There are probably some transportation abuses, but that is no argument against the average good conditions and the conditions must average fairly good or the losses would run heavier than 2 or 3 per cent mortality during transportation. When the open-air house campaign was started some tender hearted individuals, who feared cruelty, invoked the aid of the society with the long name to suppress such houses, but the agents of that society were sensible men and were convinced that the open-air houses are good and that there is no cruelty. The S. P. C. A. has al-

Members of the American Poultry Association visiting Rancocas Farm after the convention at Atlantic City.

It makes no difference what you sell or buy, the kicker is always with us, and nine times out of ten the seller or buyer or both are ignorant on matters essential to success in the venture, and it is that ignorance that is the cause of trouble and dissatisfaction.

To the fancier and breeder, who contemplates "getting after" the day-old chick business because he fears it may have injured his own trade in breeding stock and eggs, we say go slow, look before you leap and better not leap at all. The day-old chick business hasn't hurt your business at all and it isn't going to hurt it. It is true that for the past two years some breeders have suffered as a result of general business depression. It is not a new state of things and it has happened before. Recall that a few men at Atlantic City told how little they had ever made out of their business and the men who had made their little piles "said nothing and sawed wood." The day-old chick business has had nothing to do with business depression, and such depression as has been experienced has been felt all over the country and abroad and has been due to more general causes. A prominent banker remarked to a businessman friend of ours that the firm that pulled through the fiscal year just ended without a balance on the wrong side of the books

ready made some investigations in the day-old chick business and they have very properly stopped the sale of less than six chicks to a customer by city stores in some sections, the assumption being that one who will buy six or more chicks means to take care of them and try to rear them, while some purchasers of one or two merely bought them for children's toys. But don't get foolish and invite the society to step in and try to stop a perfectly legitimate and good business through a howl of "cruelty" that is not true and is neither fair nor just to the many successful men and women who are engaged in this branch of poultry work for a livelihood.

Don't raise the hue and cry of loss of vitality and of high mortality and "scrawny, scrubby, ill-looking specimens," that is neither a fair nor honest contention. Those things point back to two factors, either the breeding stock was not fit to breed from or the person running the incubators did not know his business. If these causes were not at fault then the manner of brooding and caring for the chicks was much more apt to be to blame than any conditions occurring during transportation. For goodness sake be sensible about it. We have heard all these claims before and they were laid at the door of breeding stock and

eggs for hatching and transportation abuses, when day-old chicks were sold in but few localities, or not at all, in this country. And certainly no sane person would want to interfere with the legitimate sale of eggs for hatching and of breeding stock.

Mr. Hewes seems to intimate that the reason there have been so few complaints concerning his advertisers who sell day-old chicks was that they hustled to beat him to it and to satisfy their kickers before they complained to the editor. What rot. Mr. Hewes knows that any honest advertiser is bound to try to satisfy his customers and will endeavor to do it even when he knows that the customer is unreasonable in his demands, and such men who are doing an honest and legitimate business don't let what is written to editors worry them. "I should worry and write the editor and console myself with a reading notice." He also knows that a large percentage of the "kicks" received by editors turn out on investigation to be the result of simple misunderstandings, or are often the result of failure on the part of the customer to know when he had his money's worth. Did you ever hear about the man who quotes a full Standard description of a perfect or ideal specimen and who expects to buy one for \$5 or less?

Both fowls and dogs are frequently smothered, become diseased, or are ruined as breeders, through being shipped to shows and being shown in coops carrying infection. Should we howl "cruelty" and try to kill the shows? We guess not.

The majority of day-old chicks are sold for utility purposes and the majority of them arrive safely and thrive and make fine healthy specimens. Some of ours turned out to be the best breeders we ever had. It is possible and probable that the widespread sale of day-old chicks will

affect the sale of utility eggs for incubator use and considering the quality of many such eggs and the results, it may be a good thing. Up to the present time the general idea of "incubator eggs" was any old thing that had a shell on and would stand packing. We would rather buy chicks at \$10 to \$20 a hundred than incubator eggs at \$5 to \$10 per hundred and know that so far we have always had much better value for our money.

We hope that the silly attack on the day-old chick business will be abandoned. Don't listen to the unsuccessful man who made a failure of it because he didn't know his business and who now works off his grouch by attacking the successful man, that is a common failing among a certain class of kickers.

If custom hatching can be successfully carried on in Egypt, where it has been practiced for at least 2,000 years, and where the chicks (300,000 or more annually from one incubatory) are carted across the country in cages of twenty or more on donkey back, (2,000 chicks to a pack) and are peddled out in small lots, surely we in this country ought to be able to handle the business with our more modern and improved facilities.

It is probable that there will have to be restrictions, but it won't necessarily become a "local business" with only a few hours between shipper and customer. While chicks have been successfully shipped 4,000 miles, it is not good policy to attempt such long distance shipments. Probably 1,500 miles from the hatchery, with ordinarily good transportation facilities, ought to be the limit, or the shipper should figure to be able to deliver the chicks at their destination (allowance made for reasonable delays in transit) within seventy-two hours after hatching.

Don't "knock" day-old chicks, it is better to "boost."

## The Harris Open-Air Roost for Chicks

A Coop for Growing Chicks that Has Proved Very Satisfactory and Successful in Massachusetts This Season. *By Prince T. Woods, M. D.*

EVERY TIME we pay a visit to William S. Harris, of Mansfield, Mass., we get hold of something good in the poultry equipment line and the new idea is always practical, simple, inexpensive and decidedly ingenious. Mr. Harris has been breeding Rhode Island Reds for a good many years (we have known him for at least fifteen years), and he usually winters about 1,500 good ones. He supplies "This-Day-Laid" eggs to Boston hotels and does quite a business in Standard-bred stock and eggs besides. As he is of an inventive turn of mind and

does the work on his own plant, he develops a good many labor-saving novelties.

We visited the Harris farm in Mansfield, Mass., on a very hot day the latter part of July, and found Mr. and Mrs. Harris at home. In looking over the plant we found on a shady, well-grassed range, back of the main buildings, several hundred thrifty late-hatched chicks that were looking exceptionally well, and our attention was at once attracted to the brood coops in use, which were a novelty in simplicity and practical value. We have called this coop "The Harris Open-Air Roost." Plans for making it are given with this article. See Figs. 1, 2, 3 and 4.

The Harris Open-Air Roost is designed for weaned and growing chicks, and has been successfully used for a sufficient time to prove its practical worth. Several years ago Mr. Harris became interested in the "open-air" movement and built an open-air sleeping room for himself and wife. This open-air bedroom proved so satisfactory that he has become an ardent "fresh-air" advocate, and this undoubtedly led to his experimenting with open-air roosting quarters for his growing flocks.

June hatched chicks, brooded at first in cold, "bushel-box" brooders, were transferred at the tender age of sixteen days to the open-air roost, and they have done well, making good growth in bone, flesh and feather. Earlier in the season,

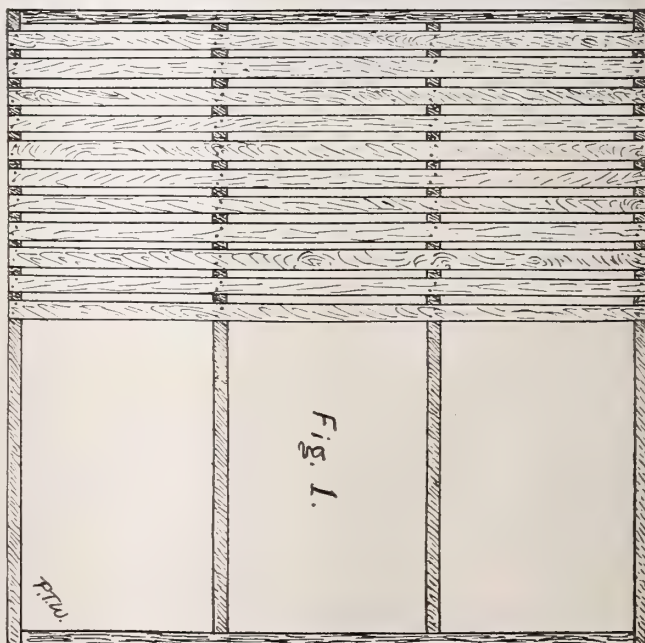

Fig. 1. Plan of frame of floor of the Harris Open-Air Roost for Chicks. View shows how frame is built of 1 x 3-inch furring, placed inch edge up. Half of floor is shown covered with lath. Entire floor is covered with these lath placed half an inch apart. See Dr. Woods' article.

when the days and especially the nights were considerably cooler, the chicks did not go into the open-air roost until about the usual weaning age.

The Harris Open-Air Roost is a simple slatted bottom, wire enclosed coop with a tight roof, and so arranged that the wire netting sides may be covered with burlap (from old grain sacks) on cool nights. It is made the length, width and height of the common plasterer's lath, which is four feet. The frame is made of 1x3 inch furring, preferably spruce, which is strong and tough. The coop is light in weight and easily moved. It is moved to fresh ground daily, moved just the width of the coop. For very small chicks it sits on the ground. For larger, well-feathered, half-grown chicks it is put up six or eight inches above the ground to give better circulation of air.

This coop will accommodate one hundred chicks very comfortably, when they are small, and about fifty half-grown ones. When small chicks are put in the roost at night, they are divided up into groups of twenty-five chicks each to avoid losses from crowding. This is very quickly and easily done with hoops of 1-inch mesh, 12-inch high, wire netting. These wire netting hoops are made about 18 inches in diameter and are easily slipped over a group of chicks without any need of handling and counting them.

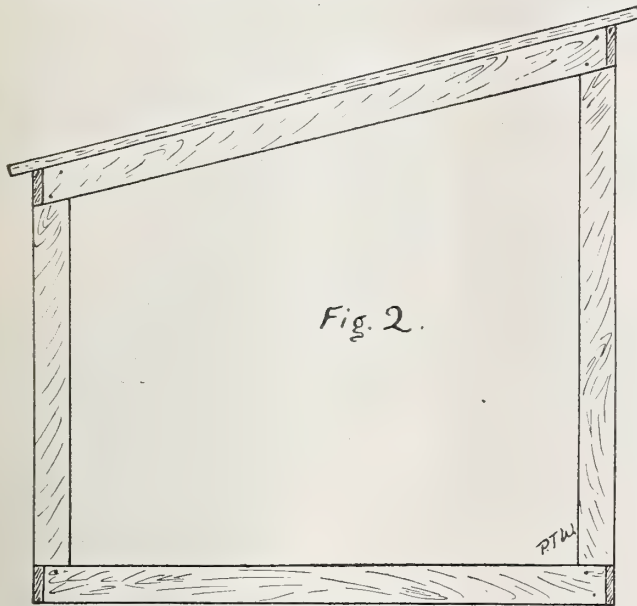

Fig. 2. End view of frame of the Harris Open-Air Roost showing simple construction of frame and the shed roof of matched boards. See Dr. Woods' article.

Fig. 1 shows diagram of partly finished floor of the roost coop. The dimensions are 4x4 feet. The frame is 1x3 inch furring placed inch edge up. On this is laid the slat floor of lath placed half an inch apart. The small chicks roost directly on this lath floor.

Fig. 2 shows the end frame, also made of furring. This is 4 feet high in front and 3 feet high at back, with a little additional height given by the matched board roof. This roof of matched boards is made wind-tight with roofing fabric.

Fig. 3 shows the front frame, made of furring, the sides being the edges of the furring strip shown at front of end plan. A wire netting door (covered with burlap) is used to close half of the front. The balance of front is wire netting covered with burlap sacking. The burlap is used only when chicks are small and on cool, windy or stormy nights.

Fig. 4 shows an end view of completed coop with part of the burlap cover torn away to expose view of wire netting. One-inch mesh wire hexagon netting is used for covering in this coop. It is not wire protected on the bottom, but it would be a wise plan to cover in bottom of coop below lath (bottom side of furring frame) with 1-inch mesh wire as additional protection against rats. The wire netting is firmly put on with staples. The burlap is not tacked on. It is simply stretched on and held in place by pinning it to the wire netting and to the other burlap, with wire nails

as shown in illustration. The coop is protected by wire netting and burlap only on all four sides.

The Harris Open-Air Roost costs little to build, it is easy to make and is safe, sane and sanitary in use. It should be opened up to the sun during the day. Cleaning is easy;

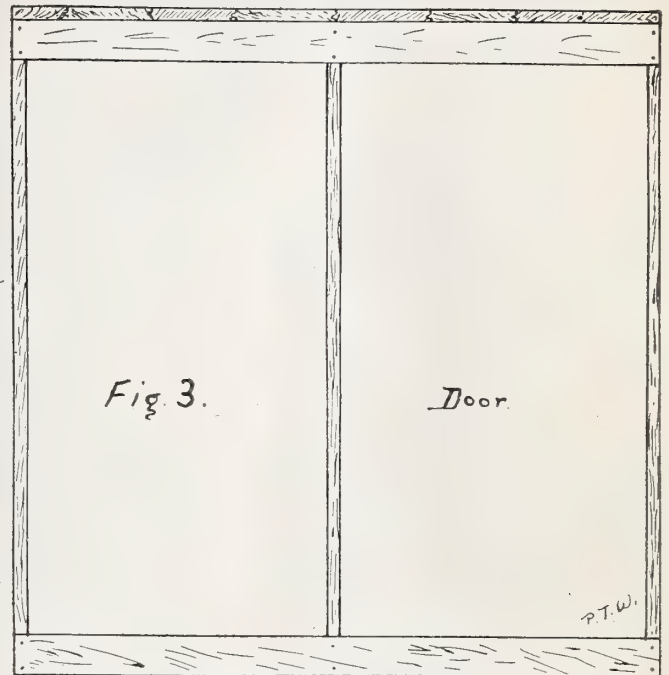

Fig. 3. Front view of frame of the Harris Open-Air Roost showing construction. See Dr. Woods' article.

simply scrape the lath floor and move the coop its own width once each day. Judgment will have to be used as to when chicks are old enough to be placed in this roost. Much will depend on the development of the chicks, the way they feather out and the way they are brooded and hardened off. In warm weather they should be ready to go into the roost by the time they are three weeks old (Mr. Harris put his in when two weeks and two days old). In colder weather chicks should be five to seven weeks old, according to season and growth. Use wire netting hoops to separate chicks at night when small.

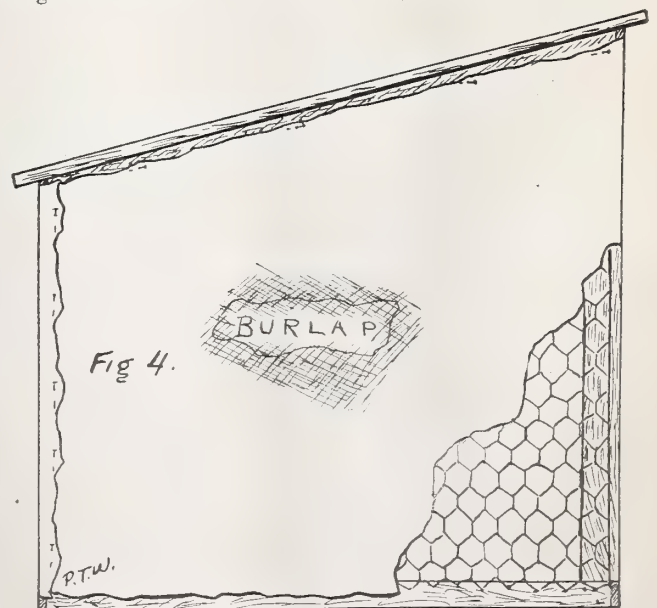

Fig. 4. End view of completed Harris Open-Air Roost for Chicks. Burlap is cut away at lower right corner to show the wire netting beneath. Burlap is simply pinned on with wire nails. Board roof is covered with roofing fabric. The coop is protected by wire netting and burlap only on all four sides. The construction gives circulation of fresh air from all sides and beneath the slatted floor. See Dr. Woods' article.

60,000 A. P. J.'s FOR OCTOBER, 1913.

State of Illinois, County of Cook, ss.:  
G. M. Atwell, president of the Atwell Printing House, Chicago, being duly sworn, certifies that the American Poultry Journal has contracted for printing and binding sixty thousand copies of the October, 1913, issue.

G. M. ATWELL.  
Subscribed and sworn to before me this 17th day of September, 1913.

Notary Public.

#### OUR GUARANTEE.

We guarantee our subscribers against loss due to fraudulent misrepresentation in any display advertisement appearing in the American Poultry Journal, providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in the American Poultry Journal, and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it occurs.

#### Reform Everybody!—Everybody Reform!

As a nation we are strong for reform and for reforming everything and any old thing; especially do we go in for well-advertised spectacular and often hysterical phases of reform. We want to reform everybody and want everybody to reform—except ourselves.

We, as a people, spend millions annually to reform the heathen in some foreign land, who prefer to believe as their ancestors did and who won't stay reformed or converted anyway, and we are blind to the revolting conditions which exist near our own homes in crowded slums, sweat shops, mills, factories, mines and the like.

One of our wealthy publishers who owns many newspapers and magazines, and who might reform many of them, fails to note the beam in his own eye while he widely advertises the mote in the eye of some brother man. He employs a small army of reform writers, "muckrakers" and others, who do much good, but he don't begin any noticeable reform work at home. The best estimate of his real object ought to win a prize.

Yet it is quite probable, even quite certain, that all this agitation, all these "high-strikes" of reforming our erring brother man, is stirring up evil that good may come. We have learned that Showman Barnum wasn't mistaken when he proclaimed that the American people like to be humbugged, and we are just beginning to find out that a good many substantial business men, promoters and brokers have known of this trait for a long time and have been fattening their pocket books on the strength of it. Very well; how long are we going to let them do it?

We export much of our best beef and, because of farcical inspection, we eat much unfit beef at home. Foods are sold us bearing fake labels and through the medium of very questionable adver-

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

tising. Fake medicines and fake booze is sold to make us still less able to take care of ourselves, and most folks seem to like the experience; anyhow, they cry for more and write glowing testimonials in favor of humbugs. And so it goes all along the line. Oh, yes, there is no doubt that many reforms are needed, everybody knows that, and we all like to read about it and to talk about it, but when it really comes to DOING ANYTHING about it, we hide

wise so sometimes), seldom has any questions asked. He howls "crooks," "crookedness" and "fakers" to his heart's content and his delighted auditors seem to require no proof in support of his statements. As long as the object of his attacks is sufficiently far away from the easy chair he is comparatively safe. How much good does it do? We don't know.

All advertising is planned to catch the attention of the reader. Much advertising, in and outside of poultry journals, is full of exaggeration and close to if not beyond the border line of actual misrepresentation and false or misleading statements. It is wrong of course, but it is getting to be a custom. Why? Because a very large percentage of prospective customers pay mighty little attention to any other kind of advertisements.

We are not basing these remarks on guess work. We believe in plain, forceful ads that tell the story straight and square, but we have to admit that so far as our experience goes the more flamboyant ad seems to bring in the most business. And don't forget for a single minute that business is what the advertiser is after. Two ads of equal size, and equally well displayed, in good position in a good medium were tried. One was a straight statement describing stock and giving prices, the other was boosted into notice with catchy catch phrases and rather extravagant claims for the same stock. The plainly worded ad (such a one as many subscribers have written about and claimed that they wanted to see) didn't bring an inquiry; the other made a good many sales. Perhaps the reason we have so much advertising in all magazines for all kinds of goods, that, to say the least, "skate on thin ice," is because the advertisers tried the experiment and stuck to the plan that made the sales.

If everybody would work for advertising reform, we'd get it soon, but

#### FANCIERS' IDEALS.

In the November issue we will begin a series of illustrated articles on "Fanciers' Ideals." Our artist, Mr. L. A. Stahl, has by an ingenious method obtained the opinions of the foremost breeders and judges of some of the leading varieties. Their criticisms have been used in making composite drawings, which we believe come very close to the general accepted type of the varieties pictured. The professional or amateur breeder will find these pictures a valuable guide for comparison and enable him to select his best birds for the breeding pen as well as for exhibition purposes.

under our own "vine and fig tree" and say, "Let George do it."

What has all this to do with poultry? A whole lot. The same conditions which exist elsewhere are to be found in the poultry business; no better and not much if any worse. It is a fine, easy thing for someone safe in an easy chair to criticize advertising, the things advertised and the publication publishing the advertisements. It is very easy, and the easy chair man not being financially responsible (or other-

just as long as even a few make big claims (even exaggerate, mislead and misrepresent), there will be others to follow the lead in an endeavor to get a share of the spoils. But bear in mind, it is one thing to believe a thing misleading, or containing misrepresentation, and another thing to prove it. We have known advertising copy to be returned to the advertiser for toning down and more moderate statements, when the advertiser was able to prove his case. It is not always possible to see things from the other man's point of view. We believe that the majority of mankind is honest, but know it is possible for two honest men to differ widely on what is and what is not honest.

We have in mind a certain publisher who jumped all over the advertising claims of a certain incubator manufacturer. He refused his advertising and wrote the advertiser that his claims were gross misrepresentation and impossible. The manufacturer's reply was to send the publisher an incubator and request him to try it and let it tell its own story. The result was that the publisher, after the test, wrote a most glowing testimonial for the machine and afterward carried the advertising with his own testimonial added to the claims to which he had once objected. You can find the evidence of this statement in half a dozen poultry journal files that cover a few years back. It doesn't pay to put up too big a howl about misrepresentation until you get the other man's point of view and become more familiar with the facts on both sides of the case.

Several advertisers use a catch phrase, "Best on Earth" or a similar claim in their advertisements in describing their own strain. There are a number of them and we don't see any harm in it. "Best in the World" and "Biggest in the World" are favorite claims for any old thing that happens to please the claimant in this "Best Country on Earth"; yet we probably get more letters condemning the use of these catch phrases than any one other thing in advertisements. We don't get the kicker's viewpoint. We do not so underrate the intelligence of readers, generally, to suppose that they take the claim "Best on Earth" literally, especially when they find several men claiming pretty much the same thing. You probably know a lot of men who have "the best little wife in the world," but we don't believe you would want to put the ban on them or condemn them as dishonest because they continue to say so and often do believe it.

We believe our business department censors advertising copy much more carefully than most magazines. Real effort is made to keep the advertising columns free from misrepresentation, but with the great volume of business carried, errors in judgment may occur, hence our guarantee. If everybody will help, and everybody try his level best, there can be a lot accomplished in the way of improvement in the conduct of poultry business generally.

We would like to see an end of faking, an end of all kinds of misrepresentation or even appearance of misrepresentation. We would like to see in every case honest values given in all sales of breeding stock, eggs for hatching and day-old chicks. The man who does not give good values only hurts his own business prospects. A customer once

"stung" doesn't often return for a second helping.

A good many times, under present conditions, dissatisfaction is the result of ignorance on the part of the seller or buyer, or both. Sometimes the breeder has an exaggerated idea of the value of his stock and their produce. He sells culls at fancy prices, because he believes, or makes himself believe, that a cull from his yards is better than the best in some other yards. He sells misshapen, thin-shelled and cull eggs, which he should not do under any circumstances, for hatching eggs and often because he has an exaggerated idea of the value of eggs laid by his strain. It isn't dishonesty—it is ignorance—and when you find such a seller the only remedy is to protest, and if you fail to get satisfaction don't patronize him

#### OUR COLORED SUPPLEMENTS

will begin in the November issue with one of the best pictures of Jungle fowls (*Gallus Bankiva*) ever shown in this country. Every poultry breeder has heard about these probable ancestors of our domestic poultry; some of them may have seen live specimens; but of this we are certain, thousands of our subscribers have never seen a picture or have read a good description of the fowl. Our artist, Mr. L. A. Stahmer, has delved in the public libraries and museums for the best information on the subject, and we believe that the picture which we show is without doubt one of the best ever published of these fowls, and we hope that it will please our subscribers. We have many more treats of this kind in contemplation. They will appear in our monthly supplements which created such a furore last season.

again and don't recommend him to your friends.

This is already too long, so we will stop here. Think it over.

#### Our New Representative.

We are pleased to announce that J. C. Johnston, of Petersburg, Ill., the well-known poultry judge, will represent American Poultry Journal as advertising solicitor in Illinois, Missouri and Iowa. Mr. Johnston will attend all the large poultry shows and fairs in the above-mentioned states this coming fall and winter, and will be glad to meet all of our present and any new advertisers who wish to consult with him regarding their advertising campaign.

Mr. Johnston is an experienced advertising man, and we recommend him to the breeder who desires to advertise in American Poultry Journal.

#### Mr. Le Roy W. Seigfried.

It is with regret that we announce to our readers the death of Mr. Le Roy W. Seigfried, Waterloo, N. Y.

Mr. Seigfried was one of our best-known breeders of Silver Laced Wyandottes, and although still a young man had bred and exhibited for many years with unusual success. His winnings at New York and other great shows proved

his ability and worth. We have known him for years and have always admired him, for his nature was one of sunshine and his work a general benefit to the fancy. We will miss him and the noble breed he loved so well loses one of its greatest champions. To his family we extend our heartfelt sympathy.

H. P. Schwab.

#### The Outlook.

Everybody is interested in the outlook for the season of 1913-14, and nobody knows anything about it. We believe that it is good. The eggs and meat end of the poultry business has no reason to complain about the way the fall season has started in prices. In some sections prices average about the same or a trifle higher than the past two seasons, in other localities, especially where there are late-staying summer folk, prices for September have been quite high and with promise of going still higher for October.

We spent a week on Cape Cod in September and had to pay 60 cents a dozen for eggs and go after them, and they were scarce at the price for a No. 1 quality new-laid article. When we reached home we found eggs here at 40 cents, small roasting chickens 23 cents a pound alive, pullets 25 cents a pound, old hens 20 to 22 cents a pound alive at the door. There is every reason to believe that the prices will hold as good and in some cases better until Christmastime anyway.

In most places we have visited the crop of 1913 chickens is rather small as compared with other years. Day-old chick men kept on hatching and selling until well into September and some reported turning back orders for October delivery, as they wanted the time to get ready for winter hatching.

We have seen some very excellent breeding stock throughout the country. Much of it promises very well, but it is a trifle slow in maturing. The proportion of very early chicks seems rather small. We have seen a large number of fine-looking, healthy young specimens in most of the popular breeds, and they ought to be in good demand a little later at attractive prices. We look for good fall sales of breeding stock, both young and old and when the hatching season comes the sales of eggs for hatching ought to be better than ever for those who took pains to furnish attractive-looking, selected, hatchable eggs from sound breeding stock the past season. The man who has made a practice of including cull eggs, with thin, water-marked, wrinkled or warty shells, in \$3 to \$10 sittings need not expect many of his customers to repeat orders the coming season. Don't forget what Lincoln said about fooling the people.

For the man who tries to keep pace with modern progress, who strives his best to succeed and to satisfy his customers, we predict a profitable and satisfactory season. The other fellow will probably get just about what he deserves, and perhaps more good things will come his way that he really deserves, but it is pretty certain to be his own fault if he makes a mess of things. So it will be a good plan to put the blame where it belongs and not try to fasten it to the other fellow.

You will get your share of the coming season's business, whether your line is fancy or utility, if you put sufficient push and pluck into it. Don't fail to observe that the modern trend is to get

so far as possible a combination of beauty and practical values. "Handsome is as handsome does," was never more true than it is today.

Be a progressive, but don't be an insurgent. Get busy and stay busy! It pays!

### On the Warpath.

Under the caption "Cassidy Tells of Fraudulent 'Hen Tonics'" the salaried reformer, Harry P. Cassidy, in the Hearst Newspapers, gets after the proprietary condition powders (and one in particular) to the extent of half a column, though just what he accomplishes by it except to advertise Cassidy and the condiment discussed doesn't appear on the surface. That there is room for reform in the field of proprietary foods, condiments and medicines, no sensible person should question, but there can easily be some honest difference of opinion concerning the right way to go about it.

That much advertising of such goods contains extravagant (and probably misleading to the uninitiated) statements and claims we believe cannot be successfully denied. We have often expressed ourself freely concerning condiments and tonics and have been deluged with written protests of the manufacturers condemning our position in the matter. Most of the manufacturers are exceedingly sensitive to even the suggestion of criticism and are very prone to lengthy written protests. Yet, strange as it may seem to them, we are not prejudiced against, nor do we condemn, the sane use of tonics, condiments, condition powders or egg foods even in the present-day proprietary forms and at present prices. In fact, there are very few of these preparations that we have investigated that we would class as wholly undesirable.

Some of the advertising claims used in the sale of such articles we believe may well be questioned, but even here this is a matter of our own individual opinion, and just as long as the manufacturers are able to produce hundreds of glowing and apparently voluntary authentic testimonials in support of their claims, we don't see how we can forbid or restrict such claims any more than we do at present. For instance, we, personally, do not believe that any condimental food will actually force hens to lay, nor do we believe that such foods and tonics will "make eggs" or "compel" hens to lay more eggs. But, please do not misunderstand us, these claims are commonly made and many people say and believe that such preparations do make eggs and compel laying, while we contend that the most any condimental food or tonic can do is to

stimulate in a greater or lesser degree and so possibly assist natural functioning.

As we have often stated, we believe the free and continuous use of condiments and tonics is undesirable and even injurious. It is also needlessly expensive and the returns won't warrant the practice. Continuous use of any condimental food leads to loss of the tonic and stimulating effect. The system becomes accustomed to the "dope" and the stimulating effect is entirely lost or it takes larger and larger quantities to get any effect at all, until such considerable amounts must be used to get any effect that the liver and other organs become diseased. The beneficial effects of condimental foods and tonics come from occasional and limited use, and we do not believe that anyone can successfully dispute that when so used they are both useful and beneficial.

Common salt is the most common seasoning, but, differing from others, it is also a mineral food. It is one of the very few "seasoning tonics" that should be fed continuously. It is an important component of the blood and tissues, in fact the blood, freed from its corpuscles and coagulating matter, is largely salted water, and in some cases of extreme loss of blood, salted water has been successfully used to take its place until a normal blood supply could be restored by the body. Most other seasonings have little food value other than the stimulating and tonic effects and yield best results from occasional use only. Salt is the most difficult to get along without and failure to supply it results in actual hardship and loss, yet many poultry keepers don't use any, except accidentally in waste or as it occurs in usual foods.

We don't know just how much Mr. Cassidy knows about hens and egg production, we haven't noted anything that indicates a profound knowledge of the subject or that he is qualified to sit as an authority to judge poultry condiments, or how far he can substantiate his claims of "fraudulent hen tonics."

We don't believe that anyone who knows anything about keeping hens will dispute the fact that fowls, especially yarded fowls, are much more easily kept in good condition by the occasional use of condimental foods of some sort. For some poultry keepers, some of the proprietary foods, even at present prices, may be safer and less expensive to use than home-prepared messes. Fowls on free range have an opportunity to eat many natural condiments and tonics, berries, buds of shrubs and trees, insects, roots and herbs as well as mineral foods. The yarded fowls can get only what is fed to them, and usually their yards are barren. So long as the con-

dimental foods are used now and then and the poultry keeper doesn't form a habit of regular daily dosing, more good than harm will probably come from their use.

Mr. Cassidy says, of one preparation, the cost of the materials in one package is about 1 cent and the mixture sells for 25 cents, the 24 cents pays for mixing and advertising. Perhaps! But the average purchaser couldn't mix the stuff in the quantities he would use for anything like 1 cent and he would probably make a mess of the job. Granted that many manufacturers make really enormous profits, it does not appear at the present time that any satisfactory plan has yet been devised to cut down selling prices and satisfy the producers with less profits; most folks in this world want all they can get and try to get all they can. These conditions exist in all fields. A reliable cutlery salesman, and member of the manufacturing firm, once told us that the actual production cost of one of their best selling razors, complete, was 11 cents. The razor sold for \$3 at retail. Jobbers and wholesalers both received discounts from the retail price to make their profits for handling, the firm carried and still carries enormous advertising accounts to make sales, and the particular salesman we know received a salary of \$200 a month and a \$10 a day expense account, and he was only one of many men on the road. Buyers were pleased with the razor at the \$3 price, we used one several years, and we don't believe anyone would howl "fraud" in this case, yet much of the advertising was extravagant and claimed remarkable virtues that really would be difficult to substantiate.

We hope the time will come when advertisers as a whole will claim less, give more and be content with less profits, but do let's be reasonable and try to be fair. Most reformers seem to be in the business for advertising themselves so as to get fatter salaries.

### Protest No. 1.

The New York State Branch of the American Poultry Association at their annual meeting held at the State Fair, Syracuse, N. Y., Sept. 11, 1913, adopted by unanimous vote a resolution protesting the adoption of Rule 17 by the American Poultry Association. The resolution of protest has been mailed to Secretary Campbell. This was the largest meeting the branch has ever held, with fifty-four members present; prominent breeders from all sections attended, including President E. B. Thompson, of the A. P. A.; Mr. D. W. Young, Prof. Rice, George E. North, Robert Seaman, H. W. Alt, Clyde Prop-

## Greater New York

First cock and first pen with only OLD birds entered. We never fail to win more firsts at such shows as Greater New York, Chicago, Indianapolis, Louisville, Nashville, Memphis, etc., than any other competitor against us. 3,000 YOUNG AND 500 OLD BIRDS FOR SALE—Write your needs in cocks, hens, chicks, or pullets, the show where you mean to exhibit and we will quote prices on any quality you care to own. We can furnish birds for any show, put them in prime condition to win at no additional cost. Send for the Orpington Fashion Plate Book and make reservation for 1914 issue—free. Mention American Poultry Journal when writing.

A. E. Martz, Buff Orpington Specialist, Box A, Arcadia, Indiana

er, D. Link Orr, George H. Northrup, W. H. Manning, etc. New York is wide awake and with a united effort we look for better things.

L. D. Howell, Secy.

### DR. WOODS' NOTES AND COMMENT.

Show season making a good start once again, and it promises to be a winner.

The Greater Buffalo Show, Buffalo, N. Y., will be held November 25 to 29. The veteran fancier and show manager, J. H. Drevenstedt, is secretary and manager of this Buffalo show, and that is a sufficient guarantee that it will be a quality exhibition and a success. "Drev." has a list of judges engaged that should draw big classes in all varieties and insure keen interest in the competition for prizes. We look for a big entry and exceptionally fine specimens (please note, fellow A. P. A.s, that we didn't say "birds" that time). The show will be held in the Broadway Auditorium. It is sure to be worth your while to make the Buffalo show this year. Don't miss it.

Chicago, The Mid-West Show, has dates at the Coliseum for December 12-17, and "big" Theo. Hewes, of Indianapolis, Ind., is the secretary, as heretofore. The judges are all men you know well and favorably. The usual prizes and the fine lot of specials will prove worth the winning, aside from the satisfaction of getting into the ribbons at Chicago. Useful and serviceable premiums in place of usual silver cups are promised, and there is considerable speculation as to what the management intends to give. It is sure to be worth while. There is every indication that this will be a great show and one where the competition will be keen and the honors worth winning. Chicago, 1913, should be bigger and better than ever before, and that will be "going some."

The Mississippi Valley Poultry Association has show dates for the big Coliseum at St. Louis, Mo., for November 25 to December 1. W. O. Chase, Hillsboro, Ill., is superintendent and veteran Henry Steinmesch, of St. Louis, is secretary-treasurer. It is to be a straight poultry show with no pigeons or cats

as a side attraction. We don't doubt that Missouri will "show 'em" this season.

\* \* \*

L. D. Howell, secretary of the Grand Central Palace Show, of New York, to be held December 2-6, writes us that "The Lucky Seventh" is to be the greatest show ever held by the Empire Poultry Association. As early as August 26 300 exhibitors, representing twenty-two states, had pledged exhibits for this show. The prizes will be well worth winning, and there will be exceptional opportunities for publicity and increased business. Mr. Howell is enthusiastic, which is saying a whole lot, for he is usually a very moderate mannered and conservative gentleman. Buff Wyandottes are expected to make a remarkable showing at the Palace. Campines, Anconas and Buttercups promise an advance over previous seasons. Buff Rocks and others of the good old stand-by breeds are sure to bring out some exceptionally good specimens worth seeing and worth competing with. To go through the classes by name of each would read like an index to the Standard. There are twenty-five "tried and proven" judges on the list and the management looks forward to "the best show we ever had." The Poultry Press, Ltd., of England, is planning a "personally conducted" poultry exhibit for the Palace Show of New York. They plan to get a good exhibit on the other side of the pond and send it over here in charge of an expert. They want to make a feature of English winners side by side with our "American Beauties," and it is certain to prove interesting and instructive. The Poultry Press would like to have American fanciers, through some representative journal, make up an American exhibit to send to England for the British Palace Show. Another feature of the New York Palace is to be a special Californian exhibit which is being made up by Mr. Keesling, of San Jose, Cal. "The Lucky Seventh" ought to prove a "golden opportunity." Don't miss it.

\* \* \*

W. B. Atherton, veteran secretary and manager of the Great Boston Show, is so much in earnest about "America's Greatest Quality Show," to be held in Mechanic's Building, Boston, Mass.,

January 13-17, 1914, that he wrote us about it in pencil when, as he said, he "ought to be in bed." That is like "Billy," he doesn't consider himself when there is work to be done for the good of the cause, and every fancier in this country knows that "Billy" Atherton is a "true blue" fancier and big show manager. He is an indefatigable worker, and he always pulls off a show that is better than his last best. The fanciers will flock to Boston for 1914 and the show promises to be a record-breaker. As always, every exhibit will be well displayed in good light, where its quality can be seen at a glance, and there will be no double-tiering of exhibition cages. All specimens will be on a level where they can be easily viewed to advantage. Already there have been many requests for premium lists and this indicates a very large entry. Every indication points to more entries from the western and southern fanciers than ever before and New England and the East is always well represented. The old favorites, the Light Brahmas, are sure to be one of the big classes, and Barred Rock men are working for the largest classes ever shown at Boston. Polish and Houdans are expected to outstrip any exhibit of the crested varieties that has ever been shown in the world. The judges are selected with care and they will all be men who are to be relied upon to place the ribbons where they belong. Five hundred dollars is up in prizes on the dressed poultry and eggs exhibits and classes are to be provided for live fowls bred particularly for market purposes.

\* \* \*

Superintendent Charles D. Cleveland did not send us information concerning the Madison Square Garden Show up to the time of going to press, but we hope to have data in time for November. This is to be Mr. Cleveland's debut as the manager of the big New York Show, and we look for big success to crown his maiden efforts. It is certain to be good work, conscientiously done. Better shake up your press notices, "Charlie," and let us know how things are coming; you have our address.

\* \* \*

Someone dubbed "the ubiquitous Mr. Hopper," of Texas, "an unconscious humorist." That's not so bad, is it? Mr. Hopper says he would "rather have

Crusader III, a Boston Winner

## REGALS AGAIN SUPREME AT THE N. Y. STATE FAIR, SEPT. 8-13, 1913

For the eighth time the Martin's Regal White Wyandottes prove themselves invincible. In a splendid class they win under Judge Drevenstedt:

Cocks 1-2-3-4-5

Hens 1-2-3-4

Cockerels 1-2-3-4-5

Pullets 1-2-4-5

Pens (Old) 1-2-3-4-5

Pens (Young) 1-2-3-4-5

\$25 in Gold for Best Display

Judges and breeders agreed that never had such a string of White Wyandottes been shown by any other breeder. In a string of seventy birds only two were unplaced showing the wonderful uniformity of type running through my flock. In eight years showing at this fair my birds have won 42 blue ribbons out of a possible 48. Why not make a start with the Regal Strain? No other strain combines exhibition and utility qualities to such a marked degree. 500 matured cockerels and pullets ready to go into the show room now. 1,000 cocks and hens to select show birds and breeding stock from. Send 4c for the Regal White Wyandotte book. Free—Illustrated catalogue and price list. Mention American Poultry Journal.

John S. Martin : Box 51 : Port Dover, Canada

something said about him good, bad or indifferent than be neglected, for advertising pays." He seems to be made happy quite often. Listen to this from Editor J. H. Robinson, in September Farm-Poultry: "Vice-President Hopper, who was frequently called to the chair, was so in love with the position that even when Hicks was presiding he remained on the platform almost continuously, and seemed to be trying to preside over the president's head." Now, isn't that just like John?

The Poultry Index for September, Vol. III, No. 1, appears in new form and an entirely new cover and dress. It has now "been borned" into the customary poultry magazine size and is a very neat and attractive journal. We congratulate Mr. Standish. We do wish, though, that the management wouldn't use the tinted paper for the inside; it is hard on the eyes, and plain white would be much better. This magazine is now developing considerably from its original specialty, and has adopted more magazine features in addition to its indexical specialties. Welcome to the broader field of work.

We note that Pacific Coast folk are becoming concerned over the practice of some egg farmers in that section who buy up old, diseased and sometimes dead horses to use as meat food for layers. We don't wonder. If, as we have been told, it is true that much of this horse meat is fed raw, the practice may easily become a menace to public health. Eggs can be, and sometimes are (though fortunately not often, so far as is known), infected through infected food consumed by the fowls. There is no doubt that consuming the raw meat of a horse having glanders might easily make the eggs of fowls so fed a source of danger to the people who eat the eggs. Some of our friends contend that as fowls are

naturally scavengers and will eat and drink many kinds of filth, that it does no harm. With all respect for their opinions, we don't believe it. If we know it, we won't eat eggs from fowls that are not cleanly fed. We want our eggs produced by hens that feed on wholesome grains, sound meat scraps and clean water, and plenty of greens. We feed clean fresh table scraps when we can get them, but we don't, and won't, feed "swill." We don't know how much the egg may be affected or infected with microscopic germs, but we do know that disease germs have been found in raw eggs. We know that eating filth spoils the taste of eggs also. The thought of it also spoils our appetite. Only recently we received the report of a peculiar form of diarrhoeal trouble affecting a flock of fowls. We suggested enteric disease due to disease germs. The drinking water supplied these fowls was sent to a laboratory for examination and was found to be swarming with typhoid fever germs. Now, we are willing to wager that a competent man on the ground could trace cases of typhoid fever in human beings to some eggs from those fowls. The only reason that many folks are not infected is due to the blessed disease-resisting immunity that most of us enjoy, most of the time, and that we only lose when we are out of condition. For heaven's sake don't feed diseased meat, raw or cooked, to poultry. We use only the best beef scrap we can buy. We are assured that it is real beef left from rendering the fat from butchers' waste. We wouldn't find fault if there was some sound, healthy horse meat in it, but we would shy at diseased meat. Yet, this beef scrap is thoroughly cooked at a high temperature, and it is probable that the germs, which undoubtedly were contained in part, if not all, of it were "sure enough" killed in the process of manu-

facture. But we are fussy about beef scrap, and it has to look, smell and prove clean or we won't use it. We test every bag we buy and if it doesn't measure up to our standard we return it to the seller. See that you make your eggs out of wholesome material, and don't think that because a hen appears to enjoy filth, and often goes unharmed by it, that filth is desirable. It is not.

## AMERICAN POULTRY ASSOCIATION

### Official Bulletin.

The present officers of the American Poultry Association are as follows:

President—E. B. Thompson, Amenia, N. Y.

First Vice-President—Dr. W. C. Cleckley, 502 Green street, Augusta, Ga.

Second Vice-President—A. A. Peters, 2445 Franklin street, Denver, Colo.

Secretary—S. T. Campbell, Mansfield, Ohio.

Treasurer—U. R. Fishel, Hope, Ind.

Executive Board—William C. Denny, Stafford Building, Buffalo, N. Y.; Charles D. Cleveland, Eatontown, N. J.; U. R. Fishel, Hope, Ind.; C. M. Bryant, 138 Federal street, Boston, Mass.; L. C. Byce, Petaluma, Cal.; George H. Rudy, Mattoon, Ill.; E. E. Richards, Cedar Rapids, Iowa; H. H. Collier, Tacoma, Wash.; Earl Hemenway, South Haven, Mich.

Election Commissioner—O. L. McCord, Danville, Ill.

The president of each state branch is also a member of the Executive Board.

There are now forty-two branch organizations representing the United States and Canada. Charters were granted to four new branches at the Atlantic City meeting: Idaho, Delaware, British Columbia and Vermont.

It was proposed to have the new Standard, that is the 1915 edition, ready

### ORIGINATORS OF ALL THE ORPINGTON FOWLS & DUCKS

Plants in America, England and South Africa Established 1873

: Box A, Scotch Plains, New Jersey

Eventually, if after the best Orpingtons any variety you will buy from their originators, why not now? And avoid loss and disappointment. We guarantee safe delivery and satisfaction, backed up by a reputation of 40 years' standing, this means something to you.

Now is the time to purchase your exhibition Orpingtons from their recognized headquarters. We always have a large stock on hand of imported birds from our English plant, being from stock mated up by our Mr. F. A. Cook especially for American requirements. We can ship the same day your order is received.

We have thousands of Orpingtons to choose from in S. C. Black, White and Buff, Diamond Jubilee, Spangle and Blue Orpingtons, all of which we originated.

It is natural the best can be procured from their originators.

Send 10c for illustrated catalogue, containing history of the origination of all the Orpingtons and hints on poultry keeping. Eggs from our winners and the finest Orpingtons in the world, \$20 a setting; from fine stock, \$10 a setting. Advice free. Inspection invited. Trains met. Over fourteen thousand first prizes won by us. We are by many times the largest poultry breeders in the world. Ornamental land and water fowl for sale.

for distribution early in 1915. It seems to be the opinion of a large number of members that the 1915 annual convention will be held in San Francisco during the Panama-Pacific Exposition.

More than 1,000 members were enrolled since the last annual meeting at Nashville. The association is in good condition financially. There are now more than 5,000 members enrolled in the American Poultry Association.

The S. C. Buff Minorcas, S. C. Red

### On the Banks of the "Tippecanoe."

For many months the Editor of American Poultry Journal was invited and requested and at last commanded by Chas. V. Keeler, of Winamac, Ind., to pay him a visit and see what a "real poultry farm" looked like, so on Monday, Sept. 8, 1913, we managed to find time to make the trip to Winamac, which is only about 90 miles from Chicago. Of course we made it a point to arrive there about

After dinner we were reminded that we had come down there to look over a real poultry farm and see some "real" White Wyandottes, but before doing so Mr. Keeler desired to show us some "real" fish and invited us to take a short walk to the banks of the Tippecanoe, and standing there on the bank we saw a number of large bass and other large fish and our only regret was that we did not have our fishing outfit with us; but it is probably just as well we did

A bunch of young White Wyandottes in the peach orchard on the farm of Charles V. Keeler, Winamac, Ind.

Pyle Leghorns and White Runner Ducks were admitted to the Standard.

A committee was appointed to revise and codify the constitution of the American Poultry Association. This committee consists of: President E. B. Thompson, Amenia, N. Y.; Frank E. Hering, South Bend, Ind.; Grant M. Curtis, Buffalo, N. Y.; Reese V. Hicks, Topeka, Kan.; John H. Robinson, Boston, Mass., and the secretary of the association.

dinner time, as we desired to be able to tell our readers of the good qualities of the White Wyandotte by actual test. In this we were not disappointed, as Mrs. Keeler had anticipated our coming and was prepared to satisfy our appetite for fried chicken, and we are now in a position to add our testimony to the thousands of others—that the White Wyandotte is the ideal chicken for frying when fried by one who knows how—and Mrs. Keeler certainly knows how.

not, or we might have been there yet and would not have found the time to tell our readers what we saw on "Keeler-ville," the home of the White Wyandottes.

Mr. Keeler's farm is located within walking distance of the business center of Winamac, right on the banks of the Tippecanoe River, one of the most beautiful streams in the country. The farm contains ten acres of rich sandy soil, well adapted to poultry raising, and every

## "THE WORLD'S GREATEST STRAIN"

FASHION PLATE II

**For twenty years I have been producing White Wyandottes that win**

—Winning in mine and my customer's hands in the hottest kind of competition: New York, Chicago, St. Louis, Pittsburgh, New Orleans, Indianapolis, Washington, D. C., Kansas City, Dallas, Texas, Los Angeles, Portland World's Fair, etc. My customers win. Stock hatched from my eggs and shipped from my yards has won in every section of this country as well as foreign lands including England, South Africa, New Zealand and Australia. The coming show season will be no exception, so let me sell you the birds that will land you among the winners. Get in line with the strain that produces a larger percent of SHOW BIRDS than any other.

### The World's Greatest Strain

In producing this grand show quality I have not lost sight of the Utility points and my birds are large, mature quick and lay from 200 to 265 eggs a year. I have succeeded in raising more good birds than ever and have for sale something like 150 cocks, 500 hens, 900 cockerels and 1,200 pullets. **Selected Breeders \$25, \$35 and \$50 a pen of 4 females and Male. CHOICE SHOW BIRDS \$50, \$75, \$100 and \$150 a pen.** Get in touch with me now for your November, December and January Show Birds. Stock conditioned, washed and fitted for your show without extra charge. Sixty-Page Art Catalogue of America's Finest White Wyandottes free for the asking. (5 red stamps for postage appreciated.) Please state your wants clearly and address

**Keelersville, Chas. V. Keeler, Prop. and Mgr., R. F. D. No. 11, Winamac, Ind.**

part of the farm is given over to the growing of White Wyandottes and peaches. The illustration herewith will give our readers an idea of how successful Mr. Keeler is in the production of both.

Mr. Keeler has been a most successful breeder of White Wyandottes for the past twenty years, and the many hundreds of fine specimens we saw on the farm is proof positive that he has thoroughly mastered the art of breeding this grand variety of fowl, for it certainly is an art to be able to produce, year after year, the many birds that he does, and

show improvement in each succeeding generation.

Some years ago we remember seeing an exhibit of Mr. Keeler's at the Kansas City (Mo.) Show, at which time he made almost a clean sweep. We admired very much the specimens exhibited there, but on the farm we saw hundreds of young birds that give promise of being far superior to those shown at that time, which is evidence that Mr. Keeler is working for improvement all the time.

During the past year Mr. Keeler has spent several thousand dollars in improvements on his farm, and now has

one of the most complete and up-to-date poultry plants that it has been our pleasure to visit, and is in a position to handle his rapidly increasing business in a most efficient manner.

The past season Mr. Keeler did a nice business in both stock and eggs for hatching, and we were thoroughly convinced that he satisfied his customers, as we had the pleasure of reading over sixty letters that he had received from customers, and in every case they expressed their entire satisfaction. Some of these letters were from people who had been buying stock or eggs from him for sev-

# *E. B. Thompson's* *Imperial "Ringlet"* *Barred Plymouth Rocks*

Are the Greatest Achievement in Modern Poultry Breeding  
THEY ARE THE PRODUCT OF OVER THIRTY YEARS OF SKILL

First Prize Cockerel and Champion Male and First Prize Pullet and Champion Female at Madison Square Garden, New York, 1913

**They Mean Something—They Sweep Away at One Stroke All Doubts and Settle the Question of the World's Leadership.** Furthermore, these 29 first prizes do not include the firsts won at New York by my customers on birds I sold—remember that.

My "Ringlets" have won first prize on exhibition pens at Madison Square Garden 8 times, no competitor has ever won first but 4 times. I have won both first and second prizes on pens 6 times and no competitor but 3 times.

My "Ringlets" have won at New York 11 first prizes on single cockerels and cocks—including first prize and champion cockerel and first cock at the 1910-11 show, first prize cockerel and champion male at the 1913 show—almost as many first prizes on males alone as any other Barred breeder has ever won on anything. I am the only living Barred Rock breeder who has ever won all the regular

These winnings tell more of the sterling qualities of the Imperial Ringlets than volumes I might write—They tell what the New York Show says.

The "Ringlet" record for 1913 at the Madison Square Garden, New York Show, is the most wonderful ever made by any Barred Rock breeder since the New York Show was founded. (See ad on back page for this remarkable record.)

Elegant breeding cockerels, trios and pens of this greatest New York prize blood for sale, and mated to produce winners if desired. Richly illustrated 70 page catalogue upon application; it is full of pictures of New York winners from life. Address

## Early Winning Show Birds

I now offer the finest very early hatched exhibition birds that I have ever produced—grand size and shape, fine heads, even clear blue color, and narrow clean-cut vivid barring to the skin. They are matchless and ready to win prizes for you in any competition in the world. The prices are very reasonable.

**My Imperial "Ringlet" Barred Rocks Have Demonstrated to All the World a Distinctive Superiority**

**THEY STAND WITHOUT A RIVAL AS THE LEADING 1st PRIZE WINNERS AT AMERICA'S IMPERIAL SHOW, MADISON SQUARE GARDEN, NEW YORK**

## **A Great Light on the Subject of New York Records**

The "Ringlets" exhibited by me personally, have won at New York a grand total of 29 first prizes—this is more than double the number ever won by any competitor—no other Barred Rock breeder in the world has ever won more than 13 first prizes in the entire history of the show—mark the difference—these figures are as remarkable as they are conclusive—they inform the public who have hitherto been confused by conflicting claims.

prizes on pullets at a single New York show, viz: 1st, 2d, 3d, 4th, 5th and the only breeder who has ever won 1st prize cockerel and champion male and 1st prize pullet and champion female at one and the same show at Madison Square Garden.

My "Ringlets" have won every Silver Cup and Trophy that has ever been offered at Madison Square Garden to be won three times. In short every trophy on Barred Rocks that has ever been offered and won three times has been finally won by me and is now my absolute property. Among them are the \$100 Challenge Trophy and the \$100 Association Cups.

The best is none too good for my customers and if you want to show you will find that judges appreciate the wondrous beauty and sharp "Ringlet" barring of my Barred Rocks. Prices are reasonable and thousands of birds to select from.

eral years, which in itself speaks volumes.

Mr. Keeler is also a poultry judge of national reputation, and as this takes considerable of his time during the fall and winter he found it necessary to secure expert help on his poultry farm, and now has in his employ Mr. Ralph Roudebush, who will manage the business during Mr. Keeler's absence and assist him when he is at home, thus assuring prompt attention to all orders and correspondence at all times.

In conclusion we wish to assure our readers that Mr. Keeler is in a position to supply White Wyandottes of the very highest type of perfection at prices that are in keeping with the quality. His catalogue will be sent on request and contains list of winnings, birdseye view of the farm, halftone illustrations of many of his noted winners, testimonials from satisfied customers and much other information. Send for a copy to Chas. V. Keeler, R. 11, Winamac, Ind.

#### AUGUST REPORT OF NATIONAL EGG CONTEST.

**T**he splendid record which the hens have made for the first seven and a half months of the National Egg Laying Contest at Mountain Grove has been greatly affected during July and August by the unusually hot weather. The extreme heat simply played havoc with the hens. To keep them in a trap nest even long enough to lay, the hens would suffer intensely from the heat and several of them died from the effects of same even when given the best of care and even though they were released every hour from the trap nest. On hottest days they were released oftener than this, but still many of them came off the nests in such a condition that it took several hours for them to recover. In many states the farmers have suffered great loss from the heat and drouth. Such high temperatures are unusual in this section. The extra good record which the hens made the first half of the contest has been ruined by the high temperature of July and August, and we doubt if the average will be as high this year as last.

The total number of eggs laid this

month was 7,691, which makes a grand total of 87,764 for nine and a half months. A pen of R. C. White Leghorns, No. 10, from Maryville, Mo., won the silver cup for August with 171 eggs. The English pen of S. C. White Leghorns still leads the contest by 271 eggs. The leading hen is a Buff Wyandotte, No. 860, which has laid 230 eggs to date. Two other hens are only four eggs behind her. Many of the varieties are changing places each month, and as the contest does not close until November 15th, there will yet be many changes. Some hens which made good records last year are not doing practically anything this year, and many which did not do well last year are doing extra well this year. The most consistent layers in the entire contest have been the Silver Wyandottes. They have held second place for many months and this variety also averaged 160 eggs per hen last year.

The ten highest pens to date are as follows:

Pen.	Eggs.
2 S. C. W. Leghorns, England.	1,830
19 Silver Wyandottes, Iowa....	1,559
11 Black Minorcas, Iowa.....	1,543
1 Anconas, Missouri .....	1,541
26 Buff Wyandottes, Missouri..	1,534
8 S. C. W. Leghorns, California	1,515
20 White Wyandottes, Arkansas	1,495
57 Black Langshans, Missouri..	1,482
30 Buff Wyandottes, Vermont..	1,475
10 R. C. W. Leghorns, Missouri.	1,471

The ten leading pens for August are as follows:

Pen.	Eggs.
10 R. C. W. Leghorns, Missouri.	171
5 Black Minorcas, Missouri...	166
18 S. C. Buff Leghorns, Missouri	163
8 S. C. W. Leghorns, California	160
11 Black Minorcas, Iowa.....	157
1 Anconas, Missouri .....	156
26 Buff Wyandottes, Missouri..	147
17 Black Minorcas, New York..	144
2 S. C. W. Leghorns, England.	144
19 Silver Wyandottes, Iowa....	141

The hens laying 200 eggs or over are as follows:

Hen.	Eggs.
860 Buff Wyandotte, Vermont..	230
600 Buff Wyandotte, Missouri..	226
62 S. C. W. Leghorns, England.	226

61 S. C. W. Leghorns, England.	221
66 S. C. W. Leghorns, England.	215
55 R. C. W. Leghorns, Missouri...	212
77 Anconas, Missouri .....	211
735 Black Langshans, Missouri.	209
72 Anconas, Missouri .....	206
67 S. C. W. Leghorn, England...	206
2,054 Black Orpington, Canada...	201

The pens have practically all been filled for some time. We can accommodate one more pen each of Buff Leghorns, Brown Leghorns, R. C. White Leghorns, Campines and Partridge Wyandottes. We will have pens from all parts of Missouri, the United States, Vancouver Island, Canada and England, and we are importing three pens from the New Zealand and Australian contestants who have been making such wonderful records in the contests of those countries. We expect to see if their birds will make as good or better records here than our own American birds. The records of the hens from these several countries will be watched with unusual interest. We believe the American hens, which have been properly bred, will be able to hold their own with the hens from any country. The last few years many breeders have been paying closer attention to selection and breeding for egg production and we expect to see the American hen and the Missouri hen hold their own. The hens which win in the next contest will certainly be the world's champion layers.

## SEVERAL THINGS MORE.

**A** MOVEMENT is on foot for breeding S. C. W. Leghorns to small comb and wattles, so we understand, and to then put this innovation in the next edition of the Standard. We don't know who the boosters are, neither do we care. The low tail "biz" was a big mistake, but the small comb fad means going from bad to worse.

Dissemination of Leghorns all over the United States was one of the greatest benefits fanciers ever bestowed upon the country.

This peculiar and very distinctive race has been worth millions to our land, and Leghorns, rejuvenated by commercial poultry raisers, will become still more valuable.

If there is one breed out of a hundred that should have been left with its native characteristics not tampered with, it should have been S. C. W. Leghorns.

The proposed innovation of breeding to smaller combs is a direct blow to utility. Large comb and wattles in the cock denote virility and vigor, and in the hen prolificness and strength to bear the strain it imposes.

The runts of a brood of chicks that are behind the others in size and strength, and that never will show the desired liveliness, and highly colored combs of the others are the small comb birds. And now are the degenerates to set the pattern? "Forbid it, Al-

mighty" A. P. A. "I know not what course others may take, but as for me give me liberty" to have the invaluable breed hark back to its primitive traits, as it will do fast enough, in the commercial breeder's yard, if the Standard is disregarded utterly.

In 1884 a concerted movement was made by almost a majority of the Leghorn men in favor of allowing the yellowish blush of plumage and the creamy white earlobes ordained by nature to remain for White Leghorns.

This failed, but when less than fifty years after 1884 have elapsed the wheel will have "come full circle." The cat will come back. How the Standard White Leghorn will look when the fourth revision of the Standard from now is printed the Lord knows. It will probably be a monstrosity. But the shape and the comb and the wattles of the business Leghorn of this great and glorious country will be like those of the first dozen Leghorns that may be picked up at random in Italy today, and which were also substantially as when Rome sat on her seven hills and ruled the world, excepting that undoubtedly the fowls then were not so uniform in characteristics as they became two thousand years later.

Following is an excerpt from Poultry World, November, 1884:

### To Leghorn Breeders.

"The following circular letter has been sent to many Leghorn breeders of late for signature:

North Haven, Conn.,  
October 1, 1884.

Mr. \_\_\_\_\_.

Dear Sir: In view of the severe restrictions placed upon Leghorns by the new Standard, we respectfully ask you to join the Leghorn breeders in the enclosed petition, which we believe will receive the hearty co-operation of all concerned.

Please give us your name below and return in the inclosed envelope, at your earliest convenience.

Yours respectfully,

H. S. Babcock,  
C. P. Jordan,  
N. D. Forbes,  
J. Boardman Smith.

"Then follows a place for name and address; also remarks. The petition referred to is as follows:

To the Officers of \_\_\_\_\_ Poultry Society:

Gentlemen: We, the undersigned, breeders of Leghorns, respectfully petition you to incorporate in your rules and regulations the following instructions to your judges:

1. Not to disqualify Leghorns for white in the face.
2. A perfect ear-lobe may be white or creamy-white.
3. The plumage of White Leghorn cocks or cockerels may have a slight yellow tinge.
4. Rose-comb Leghorns will compete in a class by themselves.

## YAMA FARMS

### S. C. Black Minorcas---Barred Rocks

Dedicate the \$90,000 New Poultry Building at Syracuse, New York, State Fair, 1913, by Making the Most Remarkable Win on

### Barred Rocks

1-2-3-4-5 Cock, 1-2-3 Hen, 1-2-3-4-5 Cockerel, 1-2-3 Pullet, 1-2 Pen Old, 1-2 Pen Young, Carrying all Specials

### S. C. Black Minorcas

1-2-3 Cock, 1-3 Hen, 1-2 Cockerel, 1-2 Pullet, 1-2 Pen Young, 3d Pen Old, all Specials

This unparalleled victory has never before been approached let alone equalled. Yama Farms Black Minorcas and Rocks are tested, and tried true in the greatest shows of America where they successfully met the keenest competition.

**Remember** Every winner was raised on Yama Farms, we breed them and when you purchase here you positively get Yama Farms line bred birds that are raised on our farms.

### 4,000 Birds For Sale

Do not be deceived and think by our great wins that our birds are beyond your reach. A dollar spent with Yama Farms has as much if not more purchasing power than a dollar spent anywhere in America. Let us fit you out for your coming show with winners and line bred birds that have the power of reproduction. Tell us your wants and we will quote you prices and send you catalog free.

Yama Farms : Newton Cosh, Manager Poultry Department : Napanoch, New York

We are constrained to petition thus for the following reasons:

1. Though, as we understand, it was voted by the A. P. A. that white in the face of Leghorns should not disqualify, the change was not made in the Standard.

2. We are informed that the change in the Standard from creamy-white to white ear-lobes was an error.

3. The best Leghorn from an economical point of view is one having deep yellow legs, skin and beak; but such a bird will naturally have a creamy-white ear-lobe, and a slight yellow tinge in the plumage.

4. Rose-comb Leghorns are as much entitled to a separate class as Pea-comb Partridge Cochins.

5. The American Poultry Association, to which we would naturally petition, has voted not to change the Standard again in five years, hence we can look for no help in that direction, and we are confident the above changes are imperatively demanded for the best interest of the Leghorn fowls, and that in this way, by conceding our request, you can most effectually aid in placing one of our most valuable breeds, both for utility and beauty, upon a natural standard.

"We have received in addition to the above a list of sixty-two names of Leghorn breeders who have signed the above petition to date, with the remark affixed, 'and still they come.'" This movement is a very general one, the signatures coming from all parts of the United States. Lack of space forbids the printing of the list. By addressing Mr. J. Boardman Smith, North Haven, Conn., with a return stamp, a list could, we presume, be procured."

Dead-white plumage and ear-lobes are at war with deep yellow legs, skin and beak today, as in 1884.

Fanciers who think that the Standard must be changed once in a while, and sometimes twice in a while, "to keep up the interest, and that neglect of change means 'death to the fancy,'" are off their trolley. The A. P. A., the Standard, the big exhibitions and great multitude of lesser ones, the dissemination of valuable breeds to millions of farmers and the wonderful events of the great poultry world in general, would thrive just the same if, instead of getting up new tests in judging, the old ones should be applied more and more strictly. For instance, instead of changing size and shape of comb in Leghorns, or any other breed, judge the comb more and more strictly by the

present Standard. Let rivals win by greater nicety.

The interest will always be kept up because its foundations are so secure. Poultry breeding numbers among its devotees a mighty host taken from all classes, ranks and stations in life. The numbers are constantly increasing. There are many accessions and but few withdrawals. Death only can separate the amateur live stock breeder from his hobby. Misfortune may come, financial disaster may overtake him, but somehow he will manage to find some kind of accommodations, the best that his means will afford—for his fowls or other pets. Once a fancier, always a fancier.

In what does the charm of breeding poultry consist?

There is inherent in the nature of man a love of pets. He wants something dependent upon him whose helplessness he can support, whose needs he can supply, and from whom he expects no other return than an appearance of pleasure at his approach. If any other return can be given it is incidental, and while it may add to his happiness, his interest in keeping animals is not dependent upon it. In fowls he finds subjects suitable for pets. They are attractive in appearance and thus win his admiration; they are interesting in their movements and so hold his attention; they are dependent upon his care and thus evoke his regard. His mind never tires in watching their movements, observing their development and studying their habits. They are infinite in surprises. They show some new character each day. From the egg to the fully matured fowl there is always something to hold his attention.

There is another trait of man that helps to explain this charm. He is combative. He likes to succeed. He will conquer success. If any obstacle opposes, his courage rises higher because of it, his determination becomes more energetic. The poultry breeder finds no little difficulty in accomplishing his full purpose. His fowls must be perfect in figure, marking, color and size in order to satisfy him. But they are not. This one lacks one thing, that another, and his success can only be partial. This gives zest to the breeding of them. Each year he looks for greater successes than the year before. He gradually approximates to his ideal only to find that a still higher one has taken its place. His ideal recedes as his fowls improve. Higher and higher it becomes as he climbs up the steps of progress. Where the vanguard rested

yesterday, the rear encamps today, and still the way is open before him. Each height surmounted reveals a higher height. And stimulated by his partial successes, he pushes forward to the never-to-be-realized complete triumph.

The many problems awaiting solution add to the charm of poultry breeding. He realizes practically what the great German writer expressed, "If I had Truth offered to me in one hand, and the search after truth in the other, I would unhesitatingly choose the latter." He becomes a searcher after truth. He questions the Sphinx of breeding about her hidden laws. What matings shall be made? How can cockerels or pullets be produced as the breeder wills? How can each generation be made superior to the one that preceded it? How can prolificacy be increased? He questions the dark-faced mother who keeps the records of the past and asks her to reveal to him its mysteries. What were the first progenitors of domestic fowls? How were the peculiarities introduced and intensified that have given us varieties so widely separated in characteristics? What principles were employed in making past breeds and what may be used in developing new ones? What relation, if any, does food have upon color? Can the sex of eggs ever be determined? What are the marks of prolificacy in a hen if in fact she has any such marks? How can the character of the chick to be begotten be determined by an examination of the sire?

These and a multitude of other questions he is constantly asking and seeking their answers. His mind is engrossed by the still undetermined questions and the pleasures of the search for truth are his.

He desires to succeed in competition. What a pleasure there is in finding the first prize awarded to a pet fowl of one's own breeding! And even if he does not become an exhibitor of his fowls, yet just as surely does he enter into a friendly competition with his neighbors and acquaintances and determines to rear the best fowls in his vicinity. This rivalry is natural; it may be, nay, it should be, generous and healthful, and when it is, it adds a new charm to poultry breeding.

The love of pets, combativeness, the search after truth, and the rivalries of a generous mind help to account for the lasting charm that there is in poultry breeding, and hundreds of years hence it will lose nothing in attractiveness or

in the number of its enthusiastic supporters.

\* \* \* \* \*

Many persons object, and with quite a show of reason, to the use of condimental foods for poultry. By condimental foods we mean those which have a stimulating effect other than derived from ordinary diet. People say as all wild birds, and other animals in a wild state, are able to get from the ordinary vegetables, grains, seeds and other things which they obtain from plains, forests or meadows, all that they need to keep them in a condition of health and strength, therefore domesticated animals do not need any stimulus to digestion—any tonics, stomachics, or condimental foods of any sort.

Now the truth is that the wild bird is unrestricted in its bill of fare. There are hundreds of things that are more or less stimulating, such as the buds of various shrubs, aromatic berries and highly seasoned vegetable productions of various sorts. Birds help themselves to these according to their varying needs. Audubon says that the wild hen turkey plucks the buds of the wild spice bush in rainy weather and gives them to her young brood. Is not this as bad as feeding pepper to your domestic turkey poults? Anyone familiar with the spice bush can testify that its barks, leaves and buds are as highly aromatic and concentrated in flavor as the mustard, ginger or pepper used to season poultry food with artificially. The fact is, almost every kind of food contains more or less of the stimulating principle. It is this which gives flavor

to all kinds of food. Without flavor all articles of diet pall on the taste, and are unfit for the digestion of either men or brutes.

All domestic poultry if deprived of the various highly flavored substances that the wild partridge, wild pheasant, jungle fowl or turkey gets in its native haunts may have a little seasoning added to the comparatively flat and tasteless diet which forms the staple in the poultry yard supplies.

There is another consideration. We make great demands on our domestic animals. We expect our horse or our working ox to travel many more miles in a day than wild horses and cattle usually do. Most wild animals ordinarily make comparatively slight demands upon their powers of locomotion. The cattle at free range on the western plains will not ordinarily go more than two or three miles from the stream in which they drink every twenty-four hours. And horses have about the same habits. But the working horses or cattle of the farmer are expected to travel in furrow many more miles than this each day, and pull hard all the time besides. In the poultry yard we expect that our fowls will grow faster and weigh more than their wild ancestors, the jungle fowls; and while the jungle fowl lays only about eight or nine eggs, we reasonably expect our domesticated layers will give us from one hundred and twenty-five to one hundred and fifty eggs annually, the alleged one hundred and fifty to two hundred average being flap-doodle. To require them to do this, without a very nutri-

tious and stimulating diet, would be making bricks without either clay or straw. Some kind of condimental food or flavoring substance must be resorted to if we would stimulate our fowls to do their best.

One caution should be observed. Fowls from which we expect eggs for hatching purposes should not be stimulated so highly to promote their laying, as in another case, where their eggs are to be sent to the food market. This production of eggs in an unnatural quantity is, to a certain degree, antagonistic to the production of healthy chickens. The vitality of the laying fowls is taxed too much. Whenever it can be done, it is best, therefore, to separate the laying from the breeding stock and apply different methods of feeding to each.

While, as will be seen, we do not condemn condimental foods in toto, yet constant caution must be exercised in their use. Of course, no exact rule can be given, but it may be safely laid down that salt, pepper, mustard, ginger, or whatever of the kind is used should be about equal in quantity to what the poultry keeper would use on his own table.

\* \* \* \* \*

Why this everlasting talk about lousy young chicks? A writer of great repute, whose contributions are found in different poultry papers, says that one louse, anyhow, is to be found on the head of each and every young chick! I have had young chicks for twenty years on a stretch, all of them absolutely without one discoverable louse.

If you take just about as much sul-

of the Foxhurst Champion Strain of Black and White Orpingtons.

phur as your hand can grasp—we mean flowers of sulphur as sold by druggists, and sprinkle it among the materials of the nest of the sitting hen, and upon the eggs so that her under parts will come in contact with the drug, also scatter it among her feathers so that it will penetrate to the skin in every part of the body, and if you take care to sprinkle it upon every portion of the fowl, so that not a feather will be left untouched by the sulphur, you will find that the chickens will not be infested with lice when you take them from the nest.

To apply it to the hen effectually it is best to make your visit at night. If you try to fuss over her in the daytime she may become uneasy and break her eggs. Go with your lantern at night, and you will find that she will bristle up her feathers when you alarm her a little, and then the sulphur will be distributed down to the very roots of her plumage. If you attempt to do this in the daytime, the hen may leave her nest soon after to get food and drink, and will shake off the sulphur before it has time to take effect.

Now I want to add a little experience. Here, where owing to the genial climate and the absence of a hibernation period of frozen ground, various insects thrive wonderfully, and all too well, I have for nearly four years kept young hen-hatched chicks perfectly free from lice by powdering the nest thoroughly and omitting to powder the sitter. I attribute this to the fact that the yards and the runs are all one great enticing dust bath and the sitters, the

nests, roosts, and the entire premises were lice free before the sitting fever attacked the birds at all. Just having a few dust baths, each of about a square yard size, does not do as well as where the soil of the entire premises and range is such as to induce the birds to make wallows in this place and that, some in sunny and others in shady spots, also some in the driest, dustiest places and others where it is damp, for they have preferences by turns.

Almost every one who has kept poultry of any or no variety has noticed a fact which has not probably been understood or has been passed over as something that would not repay investigation. This fact is simply that fowls purchased from a neighbor's or brought from a distance will lay nicely for a day or two after their arrival in their new quarters and will then "take a loafing spell" of considerable length. This has been so generally the rule that the occurrence has been passed by with the familiar comment, "They always do so," and no effort has been made to find a cause for the failure to lay or to trace the process by which the hen is enabled to retain her eggs at will.

Now there is a reason for everything, as much in the poultry business as in any other, and there is a definite cause for this action on the part of the fowls.

It must be remembered first that the hen is a sensitive creature. An utter change of surroundings is as complete an upset to her staid, methodical life as the burning of her house and the loss of all her household goods would be to

a housekeeper. Could there be an exact reproduction in the new poultry house of the familiar scenes of the old one, the hen would doubtless be contented and go on laying without a break, provided the operation of moving was accomplished in the dark and gently. The new house, however, cannot be exactly like the old one, and we can only approximate as closely as possible to familiar conditions, and leaving the new arrivals to stand for a day or two on a bare floor in a room destitute of proper nests and other fixtures, but putting them at once in the best portion of a well-appointed house. With such treatment they will not make a serious break in the work of egg production.

So much for the practical work to be done. Now for the theory in the matter. The body of a hen in laying condition contains a large number of eggs in a condition of greater or less development. Some are so far advanced that no shock will prevent their being laid, others are not. The former will be laid under any circumstances, hence the hens after transfer to a new house lay a few eggs. But here comes in the wonderful power of stopping the production of the unformed eggs, and the hen which has unwillingly deposited a few eggs evinces her perturbed state by ceasing to lay until, in the language of the Down Easter, "She's got good and ready." The only way to avoid this hiatus in laying is the one already noted—a simple remedy, but, like many others, effective in direct proportion to its simplicity.

Two panoramic views of Foxhurst Farm, Lime Rock, Conn., U.S.A. Breeders of the Foxhurst Champion Strain of Black and White Orpingtons.

in the number of its enthusiastic supporters.

Many persons object, and with quite a show of reason, to the use of condimental foods for poultry. By condimental foods we mean those which have a stimulating effect other than derived from ordinary diet. People say as all wild birds, and other animals in a wild state, are able to get from the ordinary vegetables, grains, seeds and other things which they obtain from plains, forests or meadows, all that they need to keep them in a condition of health and strength, therefore domesticated animals do not need any stimulus to digestion—any tonics, stomachics, or condimental foods of any sort.

Now the truth is that the wild bird is unrestricted in its bill of fare. There are hundreds of things that are more or less stimulating, such as the buds of various shrubs, aromatic berries and highly seasoned vegetable productions of various sorts. Birds help themselves to these according to their varying needs. Audubon says that the wild hen turkey plucks the buds of the wild spice bush in rainy weather and gives them to her young brood. Is not this as bad as feeding pepper to your domestic turkey poults? Anyone familiar with the spice bush can testify that its barks, leaves and buds are as highly aromatic and concentrated in flavor as the mustard, ginger or pepper used to season poultry food with artificially. The fact is, almost every kind of food contains more or less of the stimulating principle. It is this which gives flavor

to all kinds of food. Without flavor all articles of diet pall on the taste, and are unfit for the digestion of either men or brutes.

All domestic poultry if deprived of the various highly flavored substances that the wild partridge, wild pheasant, jungle fowl or turkey gets in its native haunts may have a little seasoning added to the comparatively flat and tasteless diet which forms the staple in the poultry yard supplies.

There is another consideration. We make great demands on our domestic animals. We expect our horse or our working ox to travel many more miles in a day than wild horses and cattle usually do. Most wild animals ordinarily make comparatively slight demands upon their powers of locomotion. The cattle at free range on the western plains will not ordinarily go more than two or three miles from the stream in which they drink every twenty-four hours. And horses have about the same habits. But the working horses or cattle of the farmer are expected to travel in furrow many more miles than this each day, and pull hard all the time besides. In the poultry yard we expect that our fowls will grow faster and weigh more than their wild ancestors, the jungle fowls; and while the jungle fowl lays only about eight or nine eggs, we reasonably expect our domesticated layers will give us from one hundred and twenty-five to one hundred and fifty eggs annually, the alleged one hundred and fifty to two hundred average being flap-doodle. To require them to do this, without a very nutri-

tious and stimulating diet, would be making bricks without either clay or straw. Some kind of condimental food or flavoring substance must be resorted to if we would stimulate our fowls to do their best.

One caution should be observed. Fowls from which we expect eggs for hatching purposes should not be stimulated so highly to promote their laying, as in another case, where their eggs are to be sent to the food market. This production of eggs in an unnatural quantity is, to a certain degree, antagonistic to the production of healthy chickens. The vitality of the laying fowls is taxed too much. Whenever it can be done, it is best, therefore, to separate the laying from the breeding stock and apply different methods of feeding to each.

While, as will be seen, we do not condemn condimental foods in toto, yet constant caution must be exercised in their use. Of course, no exact rule can be given, but it may be safely laid down that salt, pepper, mustard, ginger, or whatever of the kind is used should be about equal in quantity to what the poultry keeper would use on his own table.

Why this everlasting talk about lousy young chicks? A writer of great repute, whose contributions are found in different poultry papers, says that one louse, anyhow, is to be found on the head of each and every young chick! I have had young chicks for twenty years on a stretch, all of them absolutely without one discoverable louse.

If you take just about as much sul-

phur as your hand can grasp—we mean flowers of sulphur as sold by druggists, and sprinkle it among the materials of the nest of the sitting hen, and upon the eggs so that her under parts will come in contact with the drug, also scatter it among her feathers so that it will penetrate to the skin in every part of the body, and if you take care to sprinkle it upon every portion of the fowl, so that not a feather will be left untouched by the sulphur, you will find that the chickens will not be infested with lice when you take them from the nest.

To apply it to the hen effectually it is best to make your visit at night. If you try to fuss over her in the daytime she may become uneasy and break her eggs. But here comes in the wonderful power of stopping the production of the unformed eggs, and the hen which has unwillingly deposited a few eggs evinces her perturbed state by ceasing to lay until, in the language of the Down Easter, "She's got good and ready." The only way to avoid this hiatus in laying is the one already noted—a simple remedy, but, like many others, effective in direct proportion to its simplicity.

# Recent Inventions for Poultrymen

By Lester L. Sargent, Patent Attorney, Washington, D.C.

## Poultry Equipment Invented by Poultry Keepers, Patented in August—Brief Description of Most Important.

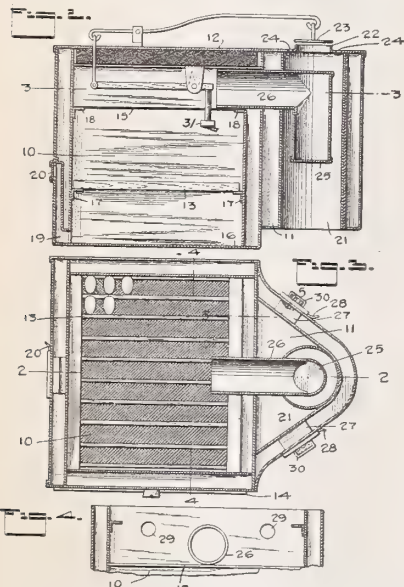

**D**URING August a variety of interesting inventions in the poultry line were patented. The following brief review, in connection with the illustrations, presents recent novelties in poultry devices.

Henry Fuchs, of Jersey City Heights, N. J., has secured a patent on a new hot-air incubator. The principal object of this invention is to provide a construction so as to admit heated air to the egg chamber uncontaminated by smoke or fumes from the heating means. This is accomplished by the use of a drum having a passage leading from it to the egg chamber, the drum itself be-

ing space B, for entry into the house and pen, and nest boxes D. The pen sections are removably attached to each other by hooks, and when it is desired to form a covered pen, the top sections may be folded completely down to form

hopper being provided with a regulating plate to admit the feed in the desired quantities, and a pendulum-like device depending from the hopper having a metal cone to scatter the feed as it falls from the hopper, and a block beneath the cone to which grains of corn are secured to attract the fowls and induce them to operate the device by picking at the block, the block itself being of rubber. The inventor states that the production of eggs may be greatly increased by providing such means for exercising the fowls. His feeder also results in the saving of considerable feed. The device is of comparatively simple construction, as will be seen from the illustration, which shows the device partly in cross section. Patent No. 1,071,097.

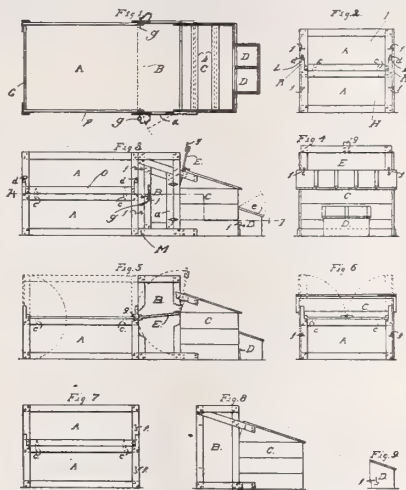

A new Trap Nest has been invented by Richard S. Blevans, of Victor, Colo.

Hot Air Incubator, patented August 19, 1913, by Henry Fuchs, City Heights, N. J., No. 1,070,677.

ing enclosed within a flue in which the lamp is placed. A fresh air chamber is provided surrounding the flue and communicating with the egg chamber, water cups also being provided, so as to insure a moist and efficient heat condition in the egg chamber. The incubator is made wholly of metal, and danger from fire is thus eliminated, and it occupies less space than does a wooden incubator. A thermostat is attached to the lifting cap of the heat vent of the case to regulate the supply of heat to the egg chamber from the heat drum, and smoke outlets are provided in proximity to this cap. Patent No. 1,070,677.

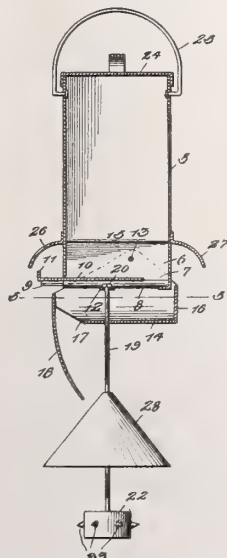

A new Poultry House and Pen has been patented by Peter B. Laidlaw, of El Paso, Tex. It is adapted especially for young chickens and has a runway adjustable in height. Its main features are the house C, the pen A, interven-

Adjustable Poultry House, patented August 19, 1913, by Peter B. Laidlaw, El Paso, Texas, No. 1,070,819.

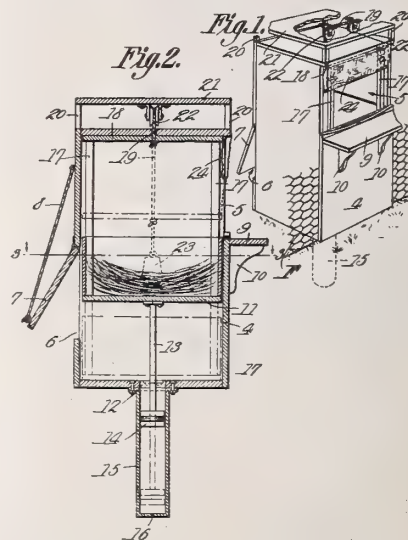

a horizontal roof, the sections preferably being rectangular frames covered with wire mesh and the house and nest boxes solid panels. Patent No. 1,070,819.

Herman Schultz, of Parkersburg, Iowa, is the inventor of a new Poultry Feeder designed to serve also as an ex-

Automatic Feeder, patented August 16, 1913, by Herman Schultz, Parkersburg, Iowa, No. 1,071,097.

erciser to maintain the fowls in a healthy condition. In brief, it comprises an oscillatory trough, open at one end, suspended from a hopper, the

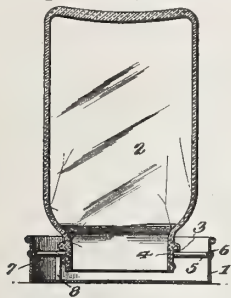

Trap Nest, patented August 26, 1913, by Richard S. Blevans, Victor, Colo., No. 1,071,201.

It is of the type designed to segregate laying hens from their lazier companions, the trap nest being placed in alignment with a separating fence or wall between two inclosures or yards. The particular feature of novelty in this trap nest is that it operates by gravity with a uniform slow velocity or movement of the nest when occupied, so as not to frighten or excite the hen, and is so arranged that the hen cannot be injured, should she pass her head through the entrance when the nest is descending. A nest is provided, slidable vertically in a suitable casing, and held in its normal raised position by a weight and cable, when the hen enters the nest slowly and evenly descends to its lowest position, in alignment with the partly closed exit on the opposite side of the casing. The hen occupies the nest in quietude and seclusion from other fowls until the egg has been laid. Then when the hen leaves the nest

through the partially open exit trap door, the weight on the cable attached to the nest causes it to slowly rise to its original position in alignment with the higher entrance opening. The slow, even downward movement of the nest is obtained by a cylinder and piston beneath and operatively connected with the nest. The cylinder has a small vent for the escape of air, thus controlling the downward movement of the piston, and nest to which the piston is connected. The cylinder is of a length somewhat longer than the vertical movement of the nest. Patent No. 1,071,201.

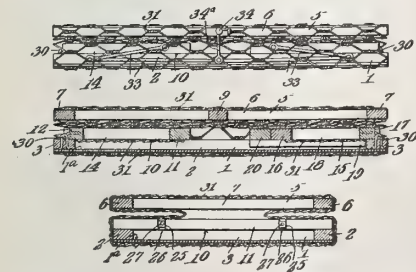

James F. Haffey, of Tiffin, Ohio, has invented a new Device for Feeding Poultry. It is specially adapted as a drinking fountain also. A novel support consisting of a single piece of spring wire bent in the form of a partial circle is provided, the circular por-

Feeder, patented August 12, 1913, by James F. Haffey, Tiffin, Ohio, No. 1,069,943.

tion being bent to form a seat-engaging arm and its open ends also being to form seat-engaging arms so as to support a feed receptacle. In this way the mouth of the reservoir or grain receptacle is maintained a slight distance above the bottom of the trough, sufficient to allow the water or grain to flow freely into the same, and also protecting the grain or water from dust and dirt as much as possible. Patent No. 1,069,943.

A collapsible Poultry-Shipping Coop has been patented by Minor Eugene Tynes, of Gloster, Miss. It may be collapsed readily, to occupy small space when not in use, and upon the return transit. It comprises a top frame, a

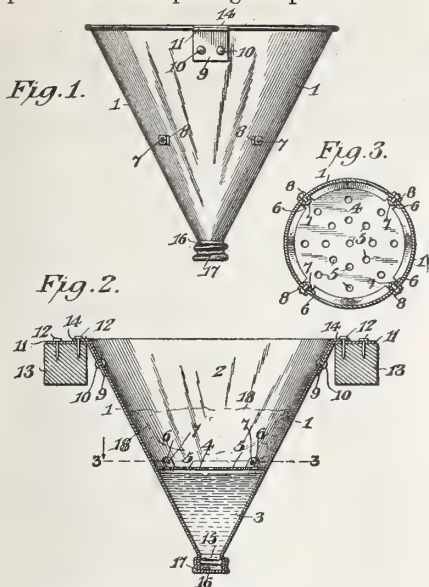

Shipping Coop, patented August 12, 1913, by Minor Eugene Tynes, Gloster, Miss., No. 1,069,743.

bottom frame, and netting constituting the sole connection between the frames. The netting is foldable to bring the frames together, and consists of diamond-shaped meshes of unequal transverse dimensions, the longer dimensions of the meshes extending parallel to the frames, to facilitate the folding of the netting, and to avoid a transverse bending of the connections between the meshes. Latches and auxiliary bars are also employed to erect the coop. Patent No. 1,069,743.

Jay Finn, of Elmo, Kan., has invented a new Poultry Nest equipped to contain

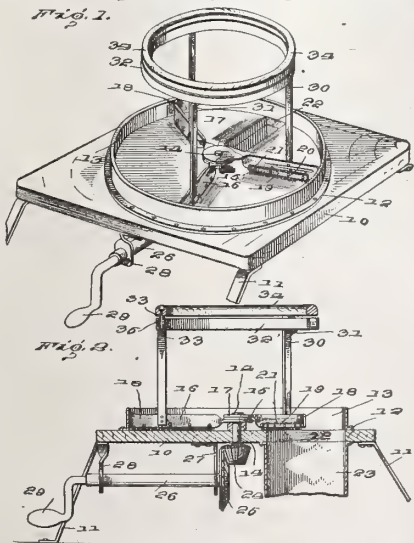

a quantity of liquid and other insecticide adapted for destroying chicken lice and other vermin. This nest is a cone-shaped receptacle, having a horizontal partition to support the hen, and provided with openings to permit fumes

Sanitary Nest, patented August 12, 1913, by Jay Finn, Elmo, Kans., No. 1,070,255.

from the insecticide compartment beneath to pass upwardly into the next compartment to destroy chicken lice and other vermin. A removable cap or closure is provided for the outlet at the apex of the cone. Patent No. 1,070,255.

A novel sanitary Chicken Roost has been patented by Robert E. Finley, of Atlanta, Ga. It may be readily cleaned without the use of tools or independent cleaning devices. Radial scraper arms are provided so that when the device is rotated by means of the hand crank and gears shown, all droppings from the roost are swept into a radial slot by brushes carried by the scraper arms, these arms being disposed within an annular upstanding flange or wall

Sanitary Roost, patented August 19, 1913, by Robert E. Finley, Atlanta, Ga., No. 1,070,439.

mounted on the platform. A roost proper is mounted for movement in spaced relation above the platform, and has immediately beneath it a trough which may be filled with insecticide, or vermicide. The roost proper is sup-

ported wholly by bolts and their sleeves rising from the trough, so that lice and other vermin cannot reach the roost unless brought there by the fowls roosting thereon. Patent No. 1,070,439.

## Tabasco Reds

Are champion S. C. R. I. Reds. Winners supplied for all shows. Write for prices.

# Chick Chats

by H. P. Schwab

The summer passes with garnered grasses,

And fruits grown yellow in orchards old,  
With birds south ranging and wood-lands changing,  
Their emerald arras to yellow gold.

The convention now is history, but we give a few notes elsewhere just to fill in.

Yes, "Billie," we have every reason to bubble with glee; our election and that Gold Brick deal is cause for it all.

Messrs. Cleveland, Denny and Fishel were duly inducted into office, and while Denny smiled the others with drawn faces looked rather troubled. Now don't be too serious, for we all have confidence in you.

Hamburg Bill is surely wrong in his claim that someone made a motion thanking DeLancy for his activity in A. P. A. matters.

President E. B. Ringlet Thompson spoke well, looked grave and acted nobly. With a united association we can hope for better things.

This was our first meeting with Vice-President Peters, who was heard to advantage all through the convention. He and that good old Democrat from the

Coast, H. H. Collier, make a powerful pair for better poultry.

The balloon went up daily after George Ewald arrived. He invited his friend, the secretary of the Boston show, to take a wheel-chair ride with him, but after George was seated Billie decided to walk, as space was limited in that particular chair. George was charged for two fares just the same, and we don't blame the culled battery a bit.

Link Orr's smile was seen to advantage. The Colonel was not worried a bit; had a glorious time and, as he told us, learned something more.

The executive board refused to grant the specialty clubs permission to use the A. P. A. cuts in their club catalogues. We think this an error, for it is very important to start the breeders right, and the clubs get them before the A. P. A. does.

The A. P. A. illustrations are supposed to be "IDEALS," and as there can be but one ideal, why not allow the clubs to use them under proper conditions in their catalogues, so they can show and instruct the beginners in the true form required?

Mr. Charles H. Welles will again judge the Barred Plymouth Rocks at

the Grand Central Palace New York Show the first week of December. This should insure a big entry of the Barred beauties for the Palace show. Mr. L. D. Howell, Mineola, N. Y., is the secretary and will be pleased to send list to all requesting one. Write him now.

Blue Orpingtons are the rage among a great and growing following. Mr. Haldie Nicholson, Leominster, Mass., was, we believe, the first to import and to introduce them into this country. He bought the great English winners for a start and since has imported several of the best breeders he could buy. He now has a large flock of these with rare quality, and can supply winners for any shows.

It was an excellent display of poultry seen at the Atlantic City show during the convention. We got the lay of the Barred Rocks and beat it over the same tracks many times. We will tell all about them in this issue. Look it up.

One question that has not received sufficient consideration is how the condemnation of the turkey trot will affect the popularity of the Thanksgiving bird.

Mr. F. H. Reed, the Barred Rock man from Virginia, made his presence felt and known both during the meet-

**Trenton, New Jersey**

## BLUE ORPINGTONS :: SILVER CAMPINES

You can't get away from the fact that these are the two breeds of fowls that there is the greatest demand for now. Why? Because the Blue Orpington has been found the best layer and table bird of all the Orpingtons, and as an exhibition bird surpasses all, and can be reared anywhere. Remember I am the originator and introducer of this world-famed strain into America. You saw me win 1st and 2d on cks. and 1st, 3d and 4th on pullets at Madison Sq. Garden Show, and at the Crystal Palace Show, London, (the greatest international competition in the world), I won 1st cup and 3d cockerel, 1st cup, 2d and 3d on pullets, also winning the international trophy for best Orpington other than Buff, beating 435 Orpingtons. If this does not prove the highest quality, nothing will. If you want the best Silver Campines to be produced in England, I can supply you. Write me your requirements and I will quote you by return. I guarantee you a square deal. Catalogue free. Mention American Poultry Journal when writing.

**Max de Bathe, Hartley Court, Reading, England**

Member Advisory Committee Live Stock Department, Panama-Pacific Exposition, 1915

ings of the revision committee and before the A. P. A. convention. As the saying goes, he made a "hit," and the boys to express their appreciation called him the ambassador from the South. We hope he will meet with us regularly.

There are few objects more forlorn  
Than poets in this world of shade;  
We cannot help their being born,  
But you may bet they're never made.

There was some little fussing about the weights of the Plymouth Rocks, and we had hoped to see them reduced a half pound on both cocks and hens. This is bound to come in our way of thinking; we reduced the pullet weight five years ago, and they are just as large today as ever. The advantage in this will be had in exhibiting and in selling and should prevail, for then as now you can breed them just as large as you wish.

#### RULE 17 PASSES

By a Handsome Majority at Atlantic City.

The Poultry Fancier Wins Single-Handed Against Practically the Entire Poultry Press of America.

Saves the Great Poultry Exhibitions of Our Country from Future Humiliation by Unscrupulous Solicitor Judges.

The above is a copy of the heading across the entire page, written by Mr. Frank DeLancy for his home paper (Bucks County Independent) on August 14, 1913.

Have you seen a copy of the A. P. J. Year Book? You should own one. The second edition is on the press now, so

send in your order at once and get this up-to-the-minute poultry book.

The Washington, D. C., association was ably represented by Secretary Sutor, and he had a hard row to hoe. They have a strong association there and promise to hold a great show at the national capital. Let's all go.

On the road again, and we hope to pick up some good stuff for our readers. We call on request if possible. Write me.

Major Harcombe says that Charlie Welles has the whole world beat on making curves and climbing hills with his auto. Thanks, Major, for forewarned may save our life, as Charles has invited us to come and take a ride with him, so we will not put NIT on that.

At the convention we were pleased to meet Mr. Lively, the general manager of the Panama Exposition. They are planning on having the largest poultry show ever held, and we believe they will.

Would it not be a good plan to have all the specialty clubs organize into one great national association?

Knicker—The Smiths have a kitchenette.

Bocker—And Jones has indigestionette.

It is wrong, radically wrong, so the powers say, for a judge to solicit advertising. But how about an editor soliciting ads on a basis of 60,000 monthly circulation when he has but 20,000 to

22,000 circulation? Or is the difference in who wears the hat?

Mr. M. F. Delano has just made his first great winning as successor to the Owen Farms at the Greater New York Show. We regret that we haven't the complete list of his winnings and hope to give them later.

The Barred Rock breeders have every reason to congratulate themselves on the revision and adoption of the new Standard. The changes made are rather slight, but stand for the betterment of the variety.

As president of the American Barred Plymouth Rock Club we wish to publicly extend our thanks to the A. P. A. revision committee for their generous aid and for the civilities accorded the club committee.

Miss Carey, of England, was at Atlantic City with a large display of Orpingtons, Campines, Bantams and dogs. Her exhibit was greatly enjoyed and particularly the pen of Buff Orpingtons.

The show season has opened with a great big, loud boom. Record entries are the word from all sections and beautiful quality of stock.

We expect to attend and report the leading fairs and shows of the East as usual this season, and will be glad to meet all our friends again. Look for us.

Our friend, Thomas Rigg, must not get sore, nor should Thomas Rigg get personal, for we strongly object to that.

I AM DEVELOPING  
WE NEVER FAIL

## THERE IS MORE PARKS' STRAIN BRED-TO-LAY BAR'D ROCK MALES

Used for improving the laying qualities of the flocks of this breed the world over more than all other strains combined. BECAUSE they make good, and are the oldest and greatest laying strain of today. Having been bred for eggs continuously since 1889, and a male whose dams, grand dams and great grand dams for generations on both sides have had individual records of better than 200 eggs in a year will undoubtedly stamp an improvement in the offspring of that flock of yours. We are the past few years supplying male birds for just this purpose to a surprisingly large number of the leading exhibition breeders of today. Our recent winnings show that in addition to heavy layers we have kept close enough to the standard to win in ordinary competition. If you aren't breeding the Barred Rocks your future is unsettled for they are the breed that outlives the boom breeds. It's pretty much as Mr. W. R. Hayne, of Timore, New Zealand, puts it to us in his letter and order received August 14th: "It's quite a relief to buy of a breeder instead of a boomer, and from a breeder whose argument is backed by years of success." COCK-EREL CIRCULAR FREE—Specially mated pens for foundation stock. Large 36-page catalogue free.

J. W. PARKS : BOX J : ALTOONA, PENNA.

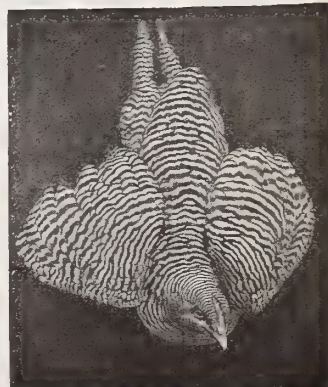

## ARISTOCRATS

WON AT 64 SHOWS Last season in the hands of my customers. Think of it—64 shows—including the largest national shows in all America—competing with the best Barred Rocks of the biggest breeders in the U. S.—winning out over them all. Now I have

### 2,000 Show Birds

Getting ready for this Winter's shows. Among these are undoubtedly the most sensational show birds ever produced. Do you need a cock bird, a cockerel, a pullet, a hen, a pen—to win with? Write me today.

W. D. Holterman, Fancier, Box A, Fort Wayne, Indiana

### THE ATLANTIC CITY POULTRY SHOW.

Side Lights of the Convention—  
 Breeders Met There—Written by  
 H. P. Schwab, Eastern Representative A. P. J.

For the first time in several years the members attending the annual convention of the American Poultry Association had the pleasure of also attending a poultry exhibit displayed on Young's Million Dollar Pier.

The exhibit was quite complete, the birds in unusually fine condition and grandly displayed in large, roomy coops. The managers of this show and the exhibitors included deserve every credit for their efforts.

We look upon this exhibit as the forerunner of many others that can be held under similar conditions, for there can be no doubt of its benefit to the poultry industry, and as the way has been shown we look and hope for others to follow. We have long believed that we should have poultry exhibits beginning in June and to have them every month of the year excepting the breeding seasons, and we still hope to see this put in practice, for poultry deserves a prominent place and part in every feature and at any and all seasons.

The list of breeders exhibiting here is a long one and included most of our famous men in poultry work. The East and the West as well as the North and South were grandly represented, and these broad-minded and liberal breeders made it possible for millions of people during the season to view a poultry display and to better understand that there is truly something worth while in Standard-bred poultry.

#### The Birds and the Breeders.

The president of the American Poultry Association, Mr. E. B. Thompson, may well head this list with his splendid display of three pens of his "Ring-

let" Barred Rocks; his exhibit included a choice pen of young birds, a pen of cockerel breeders and a pen of pullet breeders. The cockerel in the young exhibition pen was the feature, well shown, with fine style and carriage and the ideal color and barring; here, also, were some rare females that promise much. It was a very fine display of stock that well represents the quality of this noted line.

Mr. U. R. Fishel had two displays of his famous line of White Plymouth Rocks to show, and they did look well. In size and shape they were all we could wish for, fine heads and extra fine combs; in color they were positive white. His exhibit was made doubly attractive by the pictures shown of his farms.

Mr. A. J. Fell, who has been picking the blue ribbons at the M. S. Garden New York Show for some time in White Wyandottes, also entered two pens of his birds, and I am free to say that for this season of the year I have never seen a better looking pen of young birds than those shown there by him; the cockerel was turned to perfection, with a wonderful back and breast, and the pullets up close and well mated. Such birds are a positive proof of quality and we all know that Fell has that.

Mr. Lester Tompkins, the sage of the Red breeders, sent in two pens of his Reds for the visitors to inspect. They were an attractive lot and we had hoped for the opportunity to handle those birds, as in surface they were rich and even. This well-known line has stood the test of time, and as we see it year by year improved we accept this as the evidence of the line worth and the successful work of Mr. Tompkins.

Mr. M. F. Delano, the successor to Owen Farms, while showing here two exquisite pens of White and Buff Orpingtons, was at the same time also exhibiting at the Greater New York Show and winning more honors and

making the greatest record ever made. His birds as seen here wear the stamp of quality with beautiful style and size and the best of color. Mr. Delano informed us that he now had more stock than these farms ever had and that with quality he could guarantee to please all his patrons.

The Barred Rock "Wizard," Mr. A. C. Hawkins, took pardonable pride in exhibiting a few of his "Royal Blue" Barred Rocks. To the visitors and natives this line is known and wherever seen they are a feature with the people anxious to see them. Mr. Hawkins' birds were a strong collection and the kind we would bank on to produce.

Wm. Cook & Son had, I believe, the largest display here, for beside showing their full line of Orpingtons, Mr. P. A. Cook also sent in a part of his great collection of rare and wild birds. These were seen in large coops throughout the entire building and sure added tone to the exhibit, as his large cage of song-birds warbled at all times to the delight of all. Our readers are pretty well acquainted with this line of Orpingtons; as seen here they were a prime factor in the success of this exhibit.

Monmouth Farms S. C. Buff and White Leghorns were in charge of owner, Mr. J. Courtney Punderford, and were of the quality that has been winning for him at New York and the country over.

Sunnybrook Farm's display of White and Columbian Wyandottes brought back to us memories of our visit there last spring and the beautiful matings seen. This is one of our leading lines, and as being bred by Mr. Charles D. Cleveland, promises more in the future.

The display of Cornish Games by J. W. Ward was one of the best seen in years of this variety. The Cornish are coming back and are in greater favor now than ever before. Mr. Ward is now abroad buying to import the best to be had.

Mr. Henry D. Riley never does any-

thing by halves; here were seen two of his pens of Barred Rocks of the quality that has made him famous as a breeder of this variety. His success during the past five years is convincing of his ability as a breeder. The fraternity owes much to Mr. Riley for his grand work as secretary of the Barred Rock Club.

A pen of Sunswick Buff Orpingtons pleased all that seen them and were a feature. In evenness of color and true shape they were models. It seems to us that a nice head and comb looks better on an Orpington than on any other variety, and in this line these points are seen to advantage.

Mr. Barton T. Fell, of the Parkway Farms, the largest breeder of Silver Penciled Rocks in the world, displayed his birds here; also a pen of Malines. We will soon again visit this farm and tell our readers more of it. Silver Rocks as bred there are birds of beauty.

No exhibit would be complete without Mr. Jacobus and his Golden and Silver Campines, and of course they were to be seen here. His line is particularly noted for their laying quality and the large pure white eggs they lay, and for many years they have been leading winners all over the States and Canada.

The Maple Grange Barred Rocks bred by Mr. S. M. Goucher were shown in two pens. This is the line that has made such a great record at the Storrs egg laying contest, and if memory serves us rightly one of their hens made the best individual record last year by laying 210 eggs in 245 days. This line has been a consistent winner for several years at Philadelphia, Williamsport, Camden, etc.

Mr. A. B. Dalby, of the Dunrobin Farms, displayed a pen of his Buff Orpingtons, Blue and White Leghorns, and ducks. This farm has been a liberal exhibitor north and south and have many rare records to their credit.

The Briarcliff Farms, Atlanta, Ga., exhibited a full line of their Buff, Black and White Orpingtons. Many of these birds were their famous winners at last year's best shows.

Mr. R. A. Hewes, the Black Langshan breeder from the West, sent in a beauty pen that was good to see; in shape and color they were rich and of the best quality.

A pen of the Grove Hill Barred Rocks looked rich to us. This well-known line has been in the front for many years.

A very attractive display was Mr. Ferris' S. C. White Leghorns. This is one of the largest farms of the West. The birds are of fine size, well carried and in the best of vigor and condition.

Columbian Rocks were shown by F. G. Bean, one of the original breeders and a man that has made the best possible.

Other exhibitors of particular note seen here were: Seaman & Bogert, Reds; Annasmead, S. C. W. Leghorns; Wm. H. Moore, Black and Buff Orpingtons; D. Lincoln Orr, White Faverolls; E. E. Brubaker, S. C. W. Leghorns; Annesley M. Anderson, Reds; Dearborn & Sharp, Reds; Sidney R. Clark, Orpingtons; Colonel L. Paul Graham, Columbian Rocks; J. H. Wolsiefer, W. Wyandottes; H. W. Snitzer, White Rocks; J. H. Parker, Barred Rocks, etc.

Poultry supply dealers were well represented and there was a large display of the E. C. Young Poultry Houses.

The exhibit of the Rancocas Farm, S. C. W. Leghorns and White Rocks,

## More Money with Poultry

Walter Hogan has had 50 Years' Experience in breeding for egg production. His book the "CALL OF THE HEN" now published, shows how he solved the problem of

### THE 200-EGG HEN

In 5 years at Petaluma he bred a flock of 1,000 200-Egg Hens.

His pen of pullets in the 1912 Missouri Contest won for the greatest weight of eggs—131 pounds 2 ounces, equal to 229 3-5 each No. 1 eggs at Petaluma.

He told Mr. Quisenberry that they were 220-egg type.

BOOK CONTAINS 126 PAGES, 52 HALFTONES, 15 CHARTS

Send \$2 to the Sonoma Co. National Bank, Petaluma, Cal., and we mail you the book; keep it a week and if you do not want it, send it back and the Bank returns the money.

On Sale October 14th, 1913.

#### THE BOOK SHOWS:

How to pick out the egg type, and breed them with certainty of success.

How to tell approximately the number of eggs a hen will lay.

Thousands make money by using his method; one State Hospital reports \$1,500 increased profit in one year.

was a feature and a show in itself; it was prettily arranged.

The exhibit of the International Correspondence Schools was also one of the big things of this show. Their art gallery of oil paintings of all the variety of fowls was the center of attraction.

We were pleased to meet here Mr. and Mrs. R. J. Walden, the Barred Rock breeders of Middletown, Md. Mr. Walden has made his records at Baltimore, Hagerstown, Williamsport and many other shows.

Mr. Kearney, owner of Onlya Farm and specialist in White Wyandottes,

spent several days at the convention. He has an ideal plant of his own and a line of Wyandottes that he has carefully bred for years and that have been leading winners at many of our best exhibits.

Mr. C. F. Rankin, the Red man, lived up to his past record. We were glad to see him here, and he tells us to look out for his line this winter, as they are better than ever.

Mr. Aldrich, of the Aldrich Orpington Farms, came for the meeting and insisted upon our again visiting him. We are pleased to do this, for they have Orpingtons out there at Columbus, Ohio,

good to look at and to write about.

Buff Rock Louie Vierheller came in rather late, but in time to help wind up the convention.

Mr. John Pringle, the Barred Rock breeder from London, Ont., was also met here viewing the ocean and, I presume, thinking over his great win at the late "Ontario." Well, it was a hummer and he had the goods.

There is one man we always like to write about, and that is William B. Atherton, for he is so good-natured and has promised never to get sore. The last we saw of him there he was backing up his partner, George Ewald, who was overcharged for a chair ride.

The motive power on that trip was a black battery and he wanted to charge George double fare, but George claimed that Atherton was so small that they together weighed just enough to make two fair-sized men, and George won out Pilsner—easy.

Ex-President Hicks is a man hard to fully appreciate; he is just the kind to bank on and takes with him the love of all members.

Val Thompson proved himself a white hope, indeed, but when he and a stranger appeared dolled out in white trousers, lavender socks and shirt and brown caps it took our breath away. There was class to those duds, and we still wonder who the stranger was. I would hate to tell what Arthur Smith said of the pair.

It was good to again meet our dear old friend, Billie Russell. It was years since we met and he looks younger than ever.

Mr. E. E. Richards was simply "Dick" to all. He is one of those genial fellows whose thoughts are first reflected on his face. He has left many good friends back of him in the East.

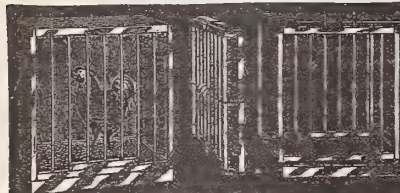

Mr. H. H. Collier is one of those Abraham Lincoln sort of men and if we ever have the chance will vote for him, but it would be our first Democratic vote.

The Hon. Dick Oke stuck to his guns at the revision meetings gallantly and won out on hackle color and markings on Partridge females. There is class to him and the men of his home town dip their hats to him.

Arthur Smith and E. C. Branch proved themselves workers and left nothing undone.

THE "CHASE"

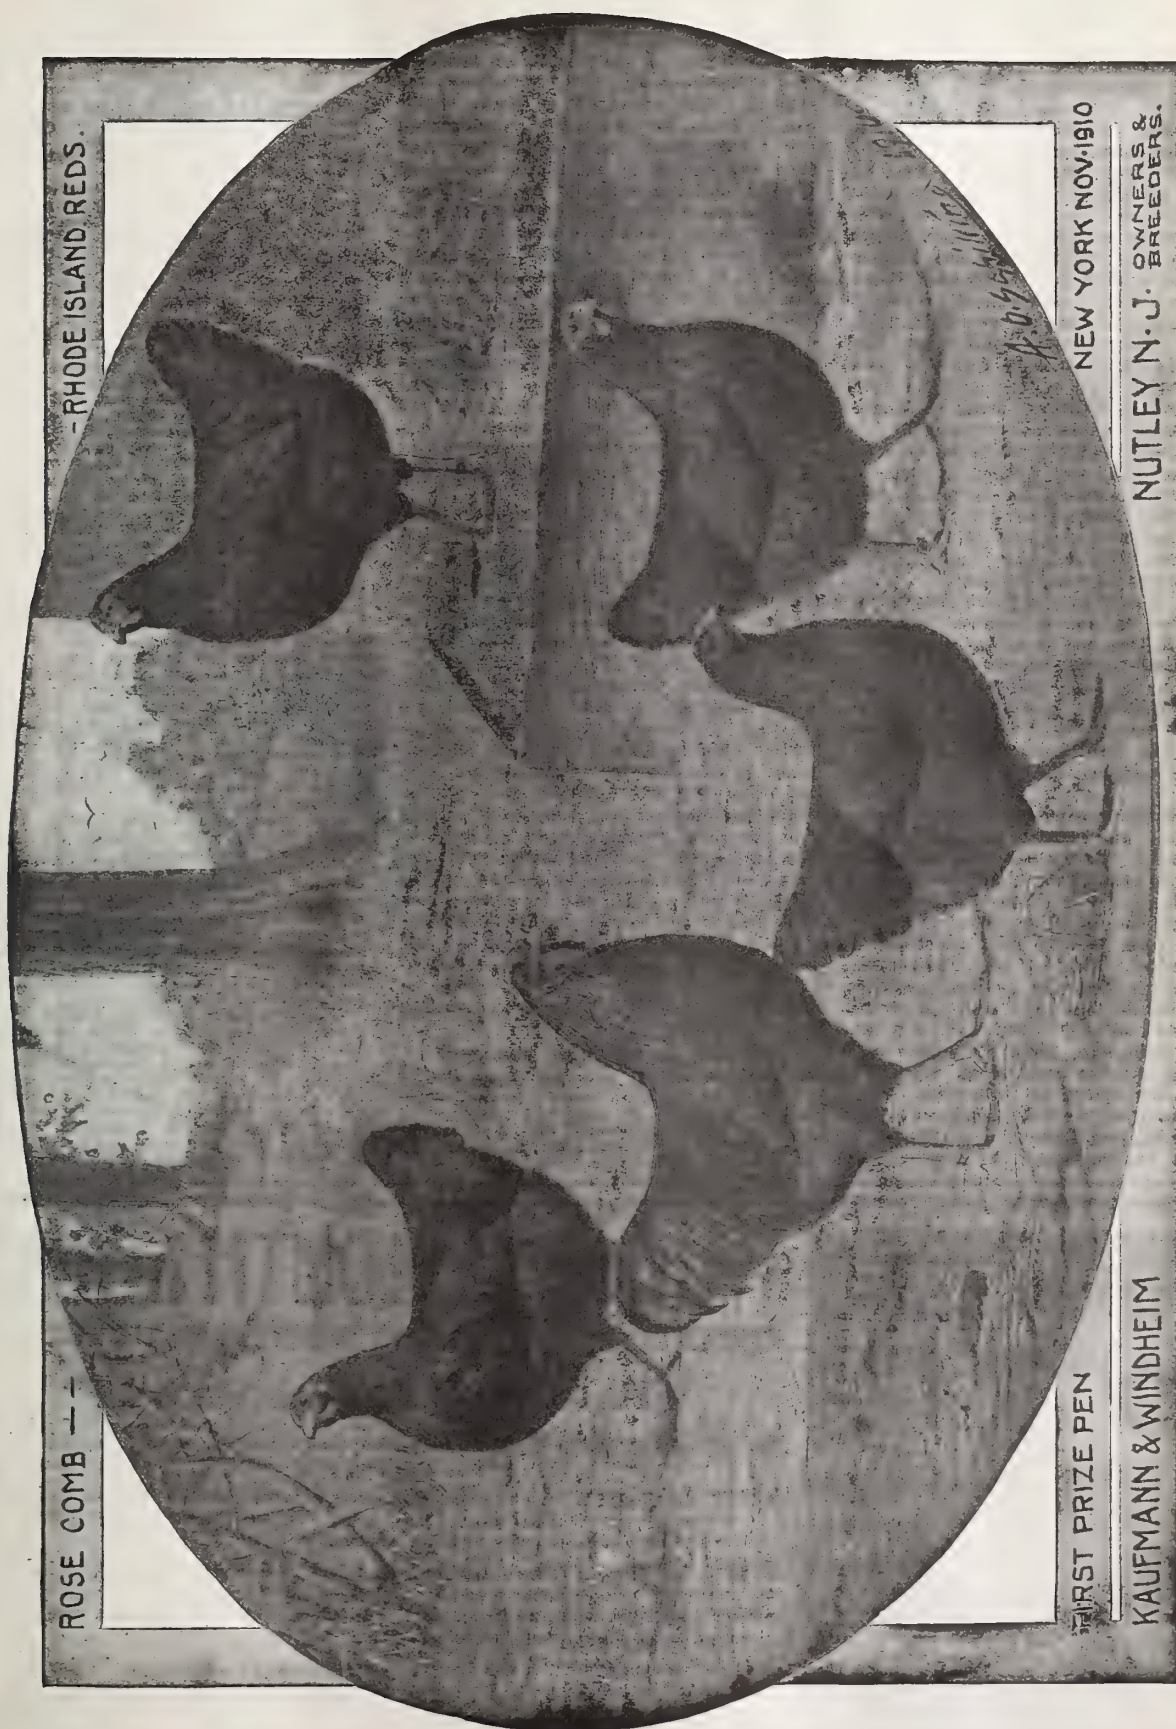

## 'Course You Are Going to Show

Then you want winners. You want the White and Stay-White kind. The kind of  
**WHITE WYANDOTTES**

Duston has. The kind you can win with and breed winners from. Note this copy of telegram rec'd from a customer who has been breeding and buying from me for four years: "Texas. You won 1st and 2d cock, 1st, 2d and 3d hen, 1st and 2d cockerel, 1st, 2d, 3d and 4th pullet, 1st and 2d pen, 3d best solid colored pen." My stock is all naturally white and I'll not knowingly send you a bird at any price that is not a White and Stay-White bird. I sold a cockerel for \$25.00 to a breeder in Indiana who won with him. I have sold him for years. This bird as a cock was sold to a prominent judge and breeder of White Wyandottes for \$100. He wanted this bird show. Only stock with breeding and correct color turn out this way. I could fill pages with unsolicited testimonials, but the above substantiates claims that I have the stock and naturally white, and should tell you where to go for your show birds, you just cannot afford to overlook writing me for quotations—The original White Wyandotte man.

**Arthur G. Duston, Box 1020, So. Framingham, Massachusetts**

## THE NEW YORK STATE FAIR.

The New \$80,000 Poultry Building  
Inaugurated—The New Management a Credit to the State—  
Entries Exceeded 5,000  
Specimens—By H. P. Schwab, Eastern Representative A. P. J.

A MODEL exhibition building. A model management and an ideal show was the popular verdict heard on all sides. For years we have been accustomed to see large and beautiful displays at the New York State Fair, they were shown in a shack of a building and with poor light and worse ventilating, but now we have a building as large and fine as we could wish for, and with superb conditions, the building is 362 feet long and 120 feet in width with high ceiling and the best of light. It is built of brick and iron and has every modern convenience.

The breeders of the state have long hoped for this and credit is due to many, but it remained for Commissioner Driscoll and Superintendent William H. Manning to insist and to start and to complete this building, which was built in just sixty days' time.

To Mr. Manning every consideration is due, for as superintendent of this great exhibit he has from the very start won his way to the hearts of the poultrymen; he is just the kind that all have confidence in, and I am sure that under his management the poultry exhibits at the New York State Fair will in future surpass those at any other show.

The exhibit was nicely arranged, the isles broad and clean and all birds shown singly. In the center of the hall is the large pond with a delightful display of fancy water-fowls, and in other sections of the building were cages of wild birds in variety and included a most perfect display of Pheasants. From first to last the general quality shown was of the best and in many cases it was of the superior kind with varieties complete. The breeders and exhibitors were a contented lot, and everyone we spoke to was glad they came. There were something over 5,000 birds cooped, and Barney Mosher was a busy man, his work and the general arrangements were most satisfactory, as every specimen was in place before time set for judging.

The New York Branch of the A. P. A. held their annual meeting here as usual, and it was the largest we have seen held in this state, with about sixty members present. A great deal of business was transacted and the new officers installed. The adoption of Rule 17 by the A. P. A. was protested, committees for future work were appointed, and they are live ones, and with Secretary Howell and harmony at work we hope soon to place this Empire State Branch in its proper place at the head.

We were pleased to meet here President E. B. Thompson and his son, also Mr. and Mrs. D. W. Young and several other breeders who came to look things over, and I am sure left with a greater and much better opinion of their state and the great exhibit seen. This management is working along the right lines and is the kind to instill confidence among the breeders and exhibitors, and they well deserve all with the hearty support of every man.

Here, as usual, several records were made, a mention of which will be noted later, but here we wish in particular to mention the great win of the Rancocas Farms in S. C. W. Leghorns and White Rocks. J. S. Martin's sweep in White Wyandottes, Guy Daily's win in White Rocks and Major Hugh A. Rose's record in Black Orpingtons. These were all records of unusual value and are worthy of every possible mention. Other classes also had their leading winners and in the following we will try and give due mention to all. We hope the breeders will bear in mind this fair for next year and then we hope to see this great building filled with upward of 8,000 birds; it is now up to them to make good and to show those who fought our battles and obtained for us this handsome building that we appreciate their work and that we have the goods right here in this state to bring out an exhibit as great and as fine as any held on earth.

#### The Birds and Their Breeders.

In Barred Rocks the first class in the show about 100 birds were seen and while not as large as it should be with this variety, it nevertheless was a class of quality with the Yama Farms, Napanoch, N. Y., making a clean sweep by winning

Old Pens 1-2-3, Young Pens 1-2-3-4, Cocks 1-2-3-4-5, Hens 1-2-3, Cockerels 1-2-3-4-5, Pullets 1-2-3, First Display and all Specials. In S. C. Black Minorcas they won Old Pen 3, Young Pen 1-2, Cock 1-2-3, Hens 1-3, Cockerels 1-2, Pullet 1-2, First Display and Specials.

This is a splendid win and Mr. Newton Cosh deserves credit for the quality of his stock and their superb condition. In the Rocks First Hen was the feature of the class with the two winning cockerels and pullets close up, this hen has the color and style of barring we want, it is the correct kind. Their winning cocks were all good but far from their best in feather.

Buff Rocks, a very large class, and we don't see how it could have been made much better, the birds as a rule were in fine feather and in both old and young shape and a quality of color was seen to strongly recommend this class as a whole. The Nescopeck P. F. Nescopeck, Pa., won second on both old and young pens, also Cock 1, Hen 1-3, Cockerel 3, Pullet 1 and Best Display. This is a line of National reputation and one we have often written of, it is one of merit all through.

Fred Armer, Ballston Spa, N. Y., another breeder of note won Old Pen First and several other places, he also is one of our oldest breeders of this variety.

Other winners were: L. H. Perry, N. Brusie, H. A. Eiler and Edgewood Farms. These Farms won First Young Pen on as fine a pen of birds as we expect to see at this season, they were finely mated and of the rarest quality in evenness of color and form.

It was a battle of the Giants for honors in White Rocks. Mr. Guy Daily, Jeffersonville, Ind., came all this distance looking for honors and won them, which is to his credit, and further he made friends with all he met and takes back with him to his Indiana home the best wishes of hundreds of eastern breeders. His birds showed character in type and with fine head points and the best of color. Down this way we are always anxious to see such stock and hope you will come again Mr. Daily. His winnings are Old Pen 1, Young Pen 3, Cock 1-4, Hens 2-3, Cockerels 3, Pullet 1-5, Best Display and Specials.

The Rancocas White Rocks (Browns Mills, N. Y.) were close up all the way and were in Chapman wonderful condition as usual. We can't say too much of this line of birds, we know it well and have seen it a winner at many of our best shows, but as seen again here we must say that it is again improved as its record must show, they won Second on both Old and Young Pens, Cock 3-5, Hens 1-4, Cockerel 1-2-4, Pullet 2-3-4 and several Specials.

The Waldron Poultry Yards, Ogdensburg, N. Y., ran a close race in this beauty class for honors and with but five entries made a noble winning with a line of stock that is commendable. Mrs. Waldron is the Chicken-man of this firm and takes her place in the front ranks as an exhibitor and conditioner, for her birds were shown in the pink of condition. Her winnings are

## WHITE PLYMOUTH ROCKS

### "The Best in the World"

#### WHY WORRY

About those coveted prizes at your fair or early show when for a few dollars I can supply you with birds with which you can win.

#### WHY WORRY

About selected breeders to infuse new blood or vitality in your flock when I can supply you with strong vigorous farm reared birds with blood lines no other White Rock breeder can give you.

#### WHY WORRY

About having eggs for your table this Winter when for a few dollars you can buy a utility flock of me that will produce you not only eggs for your own use but eggs to sell to your neighbor who has a variety of fowls that lay only when eggs are cheap.

Send for our special sale list, it is free and will interest you, I know. Write us, we want you to get acquainted.

U. R. FISHEL : BOX A : HOPE, INDIANA

Young Pen 1, Cock 2, Hen 5, and Cockerel 5. An excellent record at this great show and in a beauty class.

Columbian Rocks were a hot class with Wm. A. Orr, A. A. Whyland and E. J. Barney the leading winners. Other varieties were shown in fair sized classes including many rare specimens.

#### Wyandottes.

The Wyandottes have long been a favorite and strong class here and yearly in Whites in particular we have seen classes that favorably compare with the best seen throughout the season. This is due mainly to Mr. John S. Martin, Port Dover, Ont., who has been exhibiting here for the past eight years and in this time has made records that stand out strong for the quality of his line. Year after year he has won here an undisputed record and in most cases has taken all the honors competed for. This year with the best string he has ever shown he again swept the ribbons into his already full basket by taking Old Pens 1-2-3-4-5, Young Pens 1-2-3-4-5, Cocks 1-2-3-4-5, Hens 1-2-3-4, Cockerels 1-2-3-4-5, Pullets 1-2-4-5. If there is any breeder living that has a desire to win more than this, we would like to meet him. Mr. Martin has the goods. His line was never seen to better advantage and he was well entitled to every prize won. His First Cock and three winning Cockerels were by general consent the features of this great class with his females so close up that they also deserve the best of mention. It was a beauty display for which he also won First honors with Specials.

Columbian Wyandottes formed a class of about 80 birds and in them were seen many rare specimens. The three winning pens of old birds were all good with the young pens showing strong quality. First and second cockerels of good form and very fine color and markings. The leading winners here were D. V. G. Curtrice, Ballston Spa, N. Y., W. E. Hughson, J. T. Lohnes, J. H. Vandervort & Son, L. A. Ayers, etc.

Silver and Golden formed good sized classes and several fine birds were seen in them. The first Silver Cock a beauty.

Buff Wyandottes were a surprisingly large and valuable class, very even in quality and well shown. The winners without exception a beauty lot.

Partridge and Silver Penciled Wyandottes formed nice classes and both contained the quality we expect to see at this exhibit.

#### Leghorns.

The S. C. W. Leghorns formed the banner class of the entire exhibit with 286 birds entered by a line of well known breeders and from first to last it was filled with choice birds whose quality with condition were good to see. In this gigantic class the Rancocas Farms, Browns Mills, N. J., made a sweeping record that tells more of the quality of this line than we could if we wrote a year straight. Their winnings are Old Pen first in a class of 13, Young Pen first in a class of 18 and in both of these classes they exhibited but one pen each.

Cocks 1, Hens 1-2-3-4, Cockerels 1-2-3-4-5, Pullet 1-2-3-4-5, First Display and the "Manning Silver Cup" for best ten (10) birds in the entire exhibit. Here again we can say that these birds were entitled to every honor won for they as seen here compare with the very best. Their First Cockerel in style and shape, with ideal head points and a full well carried tail is a remarkable bird to say the least, he was finished to the minute. Second a beauty of extra size and carriage. Third a mite young, but oh what a bird and with perfect carriage. Their two pens were mated by a master and stood out strong in every detail. The winning pullets were a trim lot finished and at their best.

This Rancocas line with Mr. J. M. Foster, owner and Mr. Chapman as poultryman has been before the public for some years and they have won their way through our best shows on merit and it is safe to say that in the hands of these two men we can expect more records from them in the future.

This class as before stated was full of quality birds. The Maplewood P. Y., Attica, N. Y., exhibited a fine line that had to be considered. Others shown by W. W. Chilson, Jr., winning second young pen was a fine collection and Mr. A. Fisher, Canastota, winning second and third old pens.

The Bonnie Brook Poultry Farms, Saratoga Springs, N. Y., had a very complete display in all classes.

The R. C. White Leghorns were one of the best classes seen in some years with large entries in all classes with first old pen and the winners all very well shown.

The S. C. Browns, a good but small class, and the Rose Comb Browns a very large and extra good quality class.

Buff Leghorns also formed a rich class with several notable birds of sound pure color seen.

#### Rhode Island Reds.

The S. C. Reds formed a beauty class of 157 birds with competition keen in all classes and honors pretty well divided. Mr. H. W. Alt, Buffalo, N. Y., was the big winner here with Young Pen 1, Cock 4, Hen 5, Cockerel 1-3, Pullet 1, and Cup for Best Display. We were informed that the week before at Toronto, Mr. Alt won about all the prizes and including both First and Second Cocks. Mr. Alt has been one of our most reliable breeders for years and his winnings at Buffalo and other shows is a long one. He is a careful breeder and well deserves the reputation he has made and the records won.

Other leading winners were, W. H. Willet, W. W. Hazelton, Glove City P. Y., Rose Tilton, Adirondack P. Y., Mrs. W. L. Cobine, C. L. Hanchett, Frank Griffing and George Metzger.

In the Rose Combs there were 123 birds in line and a very even and high grade class it was. Judge Card thought the class of pullets about as good as he had seen and "Wid" sure was a busy man with all the Reds to do. The winners without exception, were a strong lot and

were in rare condition with general fine shape a feature here.

The winners were Wadsworth & Castner, H. E. Chesebrough, D. R. Hone, Ontario P. Y., Rose Tilton, W. W. Hazelton, Jenkins & Park, Geo. T. Davis, Chas. Hattersley, E. E. Hines and H. L. Green.

#### Asiatics.

Light Brahmas, with 76 birds shown, formed a beauty class for quality seen with numbers. Let us have more like this.

Dark Brahmas and all Cochins were rather small classes.

Black Langshans were a nice class of nearly 50 birds. Size, shape and color features here.

#### Orpingtons.

That the Orpingtons have not lost any of their favor was evident here with nice classes in all varieties shown. The Blacks were a beauty lot from first to last and in these Major Hugh A. Rose, Fonhill, Ont., again made his usual clean-up by winning First Pen, both old and young, Cock 1-2, Hens 1-2, Cockerel 1-2, Pullet 1-2, and Best Display. For size with shape and color this line holds some records, and we were pleased to handle the winners here and found color sound and head points proportioned and of the best. General condition the feature of all.

White Orpingtons numbered over 90 birds and in these a new champion was found in Mr. P. A. Demgar, Brown's Station, N. Y. He has been breeding for some time, but this is the first time we have met his birds, which for general quality are very superior. He won First in both Old and Young pens, Cock 1, Hens 3-4, Cockerel 1-2-3, Pullet 1-2, and First Display. His winning males were an extra strong lot of the best of form and bone, with nice heads and absolutely white. The pens were well mated and all birds showed breeding of value. This line will be heard from again; it deserves all it can get.

Buff Orpingtons were a very large class, rich in quality and birds in choice condition for this season. The Fairfield Farms, Fayetteville, N. Y., were prominent winners here and in their First Prize Old pen I noticed the cock that as a cockerel a year ago looked extra to me and whom I gave special mention. He has proven the quality bird we thought and now is as fair as ever; this whole line is a dependable one and they won good mention in about all classes.

Mr. J. D. Kryworth, Hudson Falls, N. Y., was another exhibitor that won a share with Old Pen 3, Young Pen 1, Hen 5, Cockerel 3-4. This winning young pen had all desired quality and finish, very even in color, the best of type and fine heads. We hope later to tell more of this line.

Other leading winners here were Major H. A. Rose, George Ranger, H. Schuster, Edward Schiller, M. J. Depew, A. Goetting, etc.

His Honor Judge Wm. Be-short Ather-ton did a splendid job with this class

## R. C. RHODE ISLAND RED COCKEREL SALE

A breeder from \$2.00 up. A show bird from \$10.00 up. All rich in the Bill Taft blood. Kaufmann & Windheim's famous strain. See advertisement on page 1262.

## MISS CAREY ENGLAND

Toynton, Spilsby

### AND HARMONY PARK, SCOTCH PLAINS, NEW JERSEY

Where in co-operation with this noted plant her valuable stock is always obtainable.

CAMPINES—Silver and Golden; ORPINGTONS—Buff, White and Blue; FAVEROLLES—Buff and White; LEGHORNS AND WYANDOTTES—200 to 280-Egg Strains, any breed purchased to order. DOGS—In all breeds for exhibition, guard, companionship or sport; from England's most noted kennels, delivered in tip-top form with Kennel Club Consular pedigrees. With the exception of White Orpingtons, all stock sold at Harmony Park for utility or exhibition will be imported direct from Miss Carey, England. Prompt attention, highest quality, reasonable prices. For quick service,

Address, HARMONY PARK, SCOTCH PLAINS, NEW JERSEY

and others handled. The breeders like his style and work alike.

#### Anconas.

The breeders of Anconas have every reason to feel proud of the class seen here, which numbered 76 birds, with the winners all very strong birds in type and markings. The winning young pen a beauty in mating and in high quality; second up close with a rare male. First and second cockerels very good and birds of great promise, as were also the five placed pullets, and then there were some good ones left.

#### Minorcas.

In the S. C. Blacks there were just 80 birds shown, that for size and shape were hard to beat. Under the heading of Rocks we have given the Yama Farms, Napa-

### 8-Weeks-Old Chicks

Not only avoid losses, but order and get exact number of pullets and cockerels wanted. 10,000 8-weeks-old chicks ready September 1—Barred and White Rocks—early layers for 1914. Special summer prices till October 1. Send for price list.

Pittsfield Poultry Farm Co.  
102 Main Street Pittsfield, Maine

## GOLDEN WYANDOTTES

Mine are annual winners at Boston, winning four Firsts last Jan. Good birds for sale, reasonable. Mention Am. Poultry Journal.

LOREN H. BROWN  
Lock Box 16 Lunenburg, Massachusetts

### Warm Water-Get Eggs

A little PUTNAM stove, nine inches diameter, four inches high, fire proof, keeps water from freezing in coldest weather. Holds three pints oil, burns a month without REFILLING OR TRIMMING. Prevents frosted combs. Extra eggs pay for stove every week. \$1.00 each; \$11.50 a dozen. Postpaid.

I. PUTNAM, Route 5, Elmira, New York

#### RANGE-RAISED LAYING-LEGHORNS.

S. C. WHITE LEGHORNS, Yesterlaid Strain—Superior as layers and exhibition fowls. Acknowledged the best by 17 State Experiment Stations that have bought Yesterlaid stock or eggs. New customer offer includes Poultryology (most complete poultry book ever written) free

Yesterlaid Egg Farms Co., Dept. 5, Pacific, Missouri

## Cochin Bantams

### Black-Buff-Partridge-White

We wish to state that we have scientifically bred the 4 Varieties of Cochin Bantams exclusively for many years and our strain has proven its exhibition quality throughout U. S. Not only when exhibited by us, but many of our customers have reported marvelous victories, (at such shows as Rochester, Pittsburgh, Pasadena and many other renowned shows), which were accomplished with specimens of our strain. Therefore

The Real Cochin Bantams  
America's Best Cochin Bantams  
are bred in Ohio at the Wahebe Bantam Yards and such quality cannot be found anywhere else on this great continent. If it is your intention to win this season and to breed winners write the Home of America's Best Cochin Bantams, or you will be disappointed in your undertakings.

Wahebe Bantam Yards  
Box 13B, Evanston Station Cincinnati, Ohio

noch, N. Y., winnings, which includes five of the six first prizes and several others. The line of cockerels shown by this farm was a revelation to us.

#### Campines.

The Manhattan Farms, Brighton, N. Y., have again made their start the same as last year, when they made the round of the great shows and for the entire season nearly made a clean record of winnings. Here they won Old Pen 1, Cock 1-2-3, and Hen 1. In Golden Campines they won Old Pen 1, Young Pen 1, Cock 1-2-3, Hens 1-2-3. Not showing young birds. This is a very clean cut record and as one breeder told us, they had the goods right there to win with.

Mr. H. P. McDonough, Newark, N. Y., also made a splendid record by winning Second Young Pen, First Cockerel and First Pullet. In Golden he won Cockerel 1-2, Pullet 2-3. His first Silver cockerel was a feature bird with the best of form and superior markings, nice head, etc. A really great winner in a great class.

### THIRD INTERNATIONAL EGG LAYING CONTEST.

The Third Annual International Egg-Laying Contest opened November 1, at Storrs, Conn., under the auspices of the Connecticut Agricultural College. Several circumstances have combined to make a bigger and better competition.

One of the most interesting and valuable features of this contest will be the entry, by the Storrs Agricultural Experiment Station, of ten pens for experimental purposes. These pens will not, of course, compete for prizes, but will be used for testing different rations, different methods of feeding the same ration, and for other work of a similar character. The directors of the competition cannot, of course, conduct experiments with the birds of regular entrants in view of which fact they are pleased to have such an entry from the Experiment Station. Previous competitions at Storrs have been unable to have such attractive features, but can do so now by reason of the fact that the contest will be conducted under the exclusive management of the Connecticut Agricultural College, and not in coöperation with other and outside institutions.

International interest in the third competition will be keener than ever. The Englishmen succeeded in securing only fourth place in the first event; but at this writing (September 20) they will apparently win first honors in the second event, which closes October 31. They are not, however, satisfied with this showing; they are coming back doubly fortified; the leader has entered Wyandottes as well as Leghorns in an effort to distance American breeders with their own breeds.

Raising the number of birds from five to ten for each entry has been gratifying to competitors generally since it enables them to get a trapnest record of twice as large a flock at relatively half the cost per bird. Furthermore, pen records from flocks of ten are altogether much more reliable. Again, if any individual fails to produce (this has actually happened in three instances in the current competition), the pen record is not nearly so adversely affected as when five birds constitute the competing pen.

#### A Great Win.

Just as we are closing up the last form this month we received a telegram from Aldrich Bros., Columbus, Ohio, informing us that their White Orpingtons had won at the great Allentown Poultry Show, first and second cock; first and second hen; first, second and third cockerel; first pullet, and a customer of theirs won first pen. They also won futurities.

### SHOW DATES, 1913-1914

[Note—January and February show dates will be published in our November issue.]

#### ALABAMA.

Nov. 3-8. Troy—J. A. Henderson, secretary; Forbes, judge.

#### ARKANSAS.

Oct. 13-18. Little Rock—James V. Johnson, secretary; C. A. Emory, judge.  
Oct. 27-Nov. 1. Hot Springs—George R. Belding, secretary.  
Dec. 4-9. Rogers—Larry E. Palm, secretary.

#### CANADA.

Nov. 11-14. Grimsby, Ontario—Henry B. Strome, secretary.  
Dec. 8-12. Guelph, Ontario—R. W. Wade, secretary.  
Jan. 13-15. Mitchell, Ontario—Wm. Martyn, secretary.

#### COLORADO.

Dec. 8-13. Colorado Springs—J. R. Lowen, secretary; Chas. McClave, judge.  
Dec. 29-Jan. 2. Greeley—Clarence Candlin, secretary; A. H. Smith, judge.

#### CONNECTICUT.

Nov. 18-20. Mystic—Charles H. Denison, secretary.

#### DISTRICT OF COLUMBIA.

Dec. 23-27. Washington—P. Francis Sutor, secretary; George O. Brown, C. T. Cornman, H. P. Schwab, judges.

#### FLORIDA.

Oct. 23-31. Pensacola—N. J. Lillard, secretary.  
Nov. 25-28. Ocala—David S. Williams, secretary; F. J. Marshall, judge.  
Dec. 29-Jan. 3. Tampa—J. H. Wendler, secretary; Marshall, Cook, Woodworth, Carson, judges.

#### GEORGIA.

Oct. 7-10. Cartersville—Ruchs Pyron, secretary.  
Nov. 7-14. Augusta—R. S. Guess, secretary.  
Nov. 17-22. Columbus—Jno. S. Jenkins, secretary; Chas. T. Cornman, F. J. Marshall, judges.  
Dec. 8-13. Savannah—O. J. Metcalf, secretary.  
Jan. Comer—T. C. Hutcheson, secretary.

#### ILLINOIS.

Nov. 19-22. Forrest—R. W. Osborne, secretary; W. S. Russell, judge.  
Nov. 24-29. Moline—O. F. Freeman, secretary; O. L. McCord, Thomas B. Falkner, judges.  
Nov. 24-29. Rock Island—O. F. Freeman, secretary; O. L. McCord, Thomas B. Falkner, judges.  
Nov. 26-30. Quincy—A. D. Smith, secretary; Russell, Hale, Hare, Johnston, judges.  
Dec. 1-6. Beardstown—Victor L. Adelman, secretary; J. C. Johnston, judge.  
Dec. 2-5. O'Fallon—Ferd Morgenstern, secretary; Atkins, judge.  
Dec. 2-6. Lincoln—J. W. Walker, secretary; Campbell, judge.  
Dec. 2-6. Peoria—James T. Cunningham, secretary; O. L. McCord, D. E. Hale, judges.  
Dec. 10-13. Alton—A. Consley, secretary; D. E. Hale, J. C. Johnston, judges.  
Dec. 10-13. Jacksonville—Jas. C. Weber, secretary; Geo. A. Heyl, judge.  
Dec. 12-17. Chicago—W. Theodore Hewes, secretary; W. S. Russell, O. L. McCord, J. T. Rountree, D. E. Hale, James A. Tucker, F. L. Sewell, H. B. Hark, W. C. Pierce, A. O. Schillings, A. C. Smith, H. A. Pickett, judges.  
Dec. 15-20. Freeport—Paul Wurtzel, secretary; Geo. Heyl, judge.  
Dec. 15-20. Milledgeville—C. A. Straka, secretary; F. H. Shellabarger, judge.  
Dec. 16-19. Hincley—G. Anderson, secretary; Harry W. Atkins, judge.  
Dec. 16-20. Cowden—B. W. Breighner, secretary; B. H. Shinoske, judge.  
Dec. 16-20. Pontiac—O. A. Tuttle, secretary; Chas. V. Keeler, judge.  
Dec. 17-19. Benton—M. D. Clayton, secretary; T. M. Campbell, judge.  
Dec. 17-19. Thompsonville—Chas. E. Phillips, secretary; E. M. Quay, judge.  
Nov. 18-21. Granite City—J. W. Costley, secretary; D. E. Hale, judge.  
Dec. 22-27. Lanark—J. A. Shaner, secretary; Charles McClave, Theodore Ellis, judges.  
Dec. 24-27. Kempton—W. W. Kemp, secretary; T. M. Campbell, judge.  
Dec. 26-29. Staunton—Chas. C. F. Fritz, secretary; J. C. Johnston, judge.  
Dec. 29-Jan. 3. Canton—E. D. Geiger, secretary; Johnson, judge.  
Dec. 30-Jan. 2. Champaign—Paul T. Bacon, secretary; D. E. Hale, judge.

Dec. 30-Jan. 3. Aurora—C. L. Valentine, secretary; W. C. Piene, W. S. Russell, judges.

## INDIANA.

Dec. 8-13. Goshen—D. E. Emerick, secretary; H. A. Pickett, judge.  
Dec. 8-13. Princeton—Walter J. Heller, secretary; Louis J. Demberger, judge.  
Dec. 9-14. Michigan City—A. L. Peterson, secretary; S. B. Johnston, judge.  
Dec. 10-13. Marion—Frank Sherwin, secretary; H. A. Pickett, judge.  
Dec. 11-13. Connersville—A. J. Roth, secretary; W. W. Zike, judge.  
Dec. 12-17. Indianapolis—Theodore Hewes, secretary.  
Dec. 22-27. Sheridan—G. R. McMurtry, secretary; Pickett, judge.  
Dec. 29-Jan. 3. Angola—J. Mack Fisher, secretary; H. A. Pickett, judge.  
Dec. 30-Jan. 2. Elmore—Oscar P. Hadler, secretary; Coleman, judge.  
Dec. 31-Jan. 6. Terre Haute—M. Austin Potter, secretary; Theo. Hewes, judge.

## IOWA.

Nov. 22-28. Des Moines—K. H. Guthrie, secretary; W. S. Russell, G. D. Holden, judges.  
Nov. 24-29. Davenport—Harry W. Atkins, secretary; Russell, Cram, judges.  
Nov. 24-29. Independence—C. J. Friedman, secretary; Carl Dare, judge.  
Dec. 1-5. Maquoketa—N. J. Rankin, secretary; F. H. Shellabarger, judge.  
Dec. 1-5. Villisca—J. H. Todd, secretary; Carl Dare, judge.  
Dec. 1-6. Muscatine—J. C. Collins, secretary; Russell, judge.  
Dec. 2-6. Dyersville—Frank Faha, Jr., secretary; U. J. Shanklin, judge.  
Jan. 5-9. Decorah—Len Larson, secretary; Chas. V. Keeler, judge.  
Dec. 9-12. Jefferson—H. E. Latham, secretary; Shanklin, judge.  
Dec. 9-13. Clarinda—Mart Rahn, secretary; Carl Dare, judge.  
Dec. 9-13. Richland—J. D. Brems, secretary; Joseph Dagle, judge.  
Dec. 9-14. Dubuque—Paul Krocheski, secretary; W. S. Russell, judge.  
Dec. 10-13. Centerville—Bert F. Pixley, secretary.

## KANSAS.

Nov. 17-20. Severance—D. J. Ward, secretary; Adam Thompson, judge.  
Dec. 1-5. Pittsburg—D. J. Mackey, secretary; Adam Thompson, judge.  
Dec. 8-13. Emporia—F. J. Horton, secretary; J. J. Atherton, judge.  
Dec. 8-13. Coffeyville—Charles Radloff, secretary; Henry C. Dipple, judge.  
Dec. 15-20. Neodesha—E. L. Graves, secretary.  
Dec. 18-20—Osborne—L. J. Cowger, secretary; W. A. Lamb, judge.  
Jan. 5-11. Independence—L. H. Wible, secretary.  
Jan. 20-23. Leavenworth—C. M. Swan, secretary; Shellabarger, judge.

## KENTUCKY.

Oct. 7-10. Hopkinsville—B. G. Nelson, secretary; H. A. Pickett, judge.  
Dec. 1-6. Louisville—John A. Murkin, secretary.

## LOUISIANA.

Nov. 5-12. Shreveport—Louis N. Brueggerhoff, secretary; O. L. McCord, judge.

## MASSACHUSETTS.

Nov. 26-29. Mansfield—Faye Howe, secretary; Lambert, judge.  
Dec. 5-6. Kingston—A. H. Holmes, secretary; Geo. W. Weed, J. E. Mack, judges.  
Dec. 11-13. Lawrence—Neal W. Webster, secretary; I. K. Felch, L. Burnham, Jesse Rutter, D. P. Shove, judges.  
Dec. 16-18. Springfield—H. L. Davis, secretary; W. B. Atherton, Paul P. Ives, W. H. Card, C. H. Welles, Richard Oke, judges.

## MICHIGAN.

Dec. 8-14. Battle Creek—De Lloyd Schell, secretary; Heck, Mullinix, Sewell, judges.  
Dec. 27-Jan. 1. Jackson—W. O. Wellman, secretary; W. S. Russell, judge.  
Dec. 27-Jan. 3. Lansing—L. D. Maxson, secretary; Wm. Wise, judge.  
Dec. 30-Jan. 2. Petoskey—E. M. Martin, secretary; R. V. Otto, judge.  
Dec. 30-Jan. 2. Zeeland—Jno. A. Hartgerink, secretary; R. V. Otto, judge.

## MINNESOTA.

Nov. 24-27. St. Cloud—L. R. Swift, secretary; Ralph Whitney, judge.  
Dec. 2-7. Crookston—Mrs. F. C. Mitchell, secretary; E. G. Roberts, judge.  
Dec. 3-6. Rochester—C. A. Boyd, secretary; Whitney, judge.  
Dec. 3-6. Two Harbors—Fred D. W. Thias, secretary; Gimlin judge.

Dec. 22-26. Albert Lea—H. E. Ruble, secretary; Jos. Dagle, judge.  
Jan. 20-24. Bird Island—Paul Kolbe, secretary; A. C. Smith, judge.

## MISSOURI.

Oct. 8-9. Galena—W. D. Craig, secretary.  
Nov. 24-29. St. Louis—James J. Long, secretary; C. S. Byers, C. A. Emry, Frank Heck, Charles H. Rhodes, T. J. Rountree, J. S. Mertins, judges.  
Nov. 25-Dec. 1. St. Louis—Henry Steinmesch, secretary; Theodore Hewes, A. C. Smith, C. S. Byers, Fred Harrison, E. C. Branch, Edw. Joynson, Tom Woods, V. O. Hobbs, J. A. Leland, judges.

Newtown, Pa., U. S. A.

**PURINA CHICKEN CHOWDER**  
won't make your hens lay,  
they must be roosters.  
Col. Purina

Purina Chicken Chowder is a dry mash which contains just the ingredients to insure an abundance of eggs right through the Winter. Dry Purina Chicken Chowder should be kept before hens all of the time. The more Chicken Chowder Biddy eats the more eggs she will lay. Hens should also have Purina Scratch Feed, two or three times a day, in a litter.

**Col. Purina guarantees**  
**More eggs or money back**

to any poultry raiser who uses Purina Chicken Chowder according to directions and fails to get more eggs.

Purina Poultry Feeds are for sale by the leading dealers. Your dealer will order them for you, if he doesn't already carry them in stock.

**Poultry Book Free**

For your dealer's name I will send you this 48-page Poultry Book, containing plans of houses, breeding and feeding charts, space for daily egg records, cures of diseases, care for baby chicks, etc. It also contains information about Col. Purina's half price galvanized iron Chick Drinking Fountain (2 for 25c) and his galvanized iron Automatic Chicken Chowder Feeder (50c). Write today.

## A FIFTY-THOUSAND BIRD EGG FARM.

A Visit to Rancocas Farm at Browns Mills, N. J.—By E. J. W. Dietz.

WITHOUT doubt the most treacherous coast along the shores of successful poultry keeping are the places where the hidden rocks and questions concerning the keeping of fowls in large numbers are located. In theory many poultry keepers think that if they have success with one hundred fowls they will have equal results and greater success with one hundred or one thousand times as many. But, in practice this is not so. It seems that in poultry keeping, particularly, that as you add to your numbers you multiply your difficulties.

For twenty-five years I have lived in the vicinity of Chicago and during most of that time have been interested in poultry keeping and poultry farming. I have seen many plants, costing thousands of dollars, spring up in this vicinity, from time to time, and in a very few years the apparently successful operations would be discontinued suddenly. In studying the history of such plants in an endeavor to find the causes for such discontinuances, it seemed that in practically every case the proprietor did not have the "know how"; and of the many who seemed to know how all seemed to be lacking the necessary capital to make a proper beginning.

With a knowledge of such facts, the reader can imagine the eagerness with which I accepted the invitation extended, while in attendance at the annual convention of the American Poultry Association at Atlantic City recently, to visit what was said to be the largest poultry plant in the world. It was said that, while this may not be the largest as far as number of acres is concerned, it was by far the largest as far as the number of fowls was concerned, as it inhabited some fifty thousand fowls. The prospects were so alluring that some forty-four of those who attended the convention accepted the invitation. Among this number were the poultry professors and instructors of numerous agricultural experiment stations. Among whom were the following: Prof. Quisenberry of Missouri, Dr. Pearl of Maine, Graham of Massachusetts, Smith of Minnesota, Phillips of Indiana, Nelson of Mississippi, and Lewis of New Jersey. Besides these there were several proprietors of prominent poultry farms in the east and west, and a few representatives of poultry journals. With such a number to bear witness of what I shall attempt to say about what I saw at this place, I realize that I must stick to the facts or I will be contradicted both in my premises and in my conclusions.

We were met at Browns Mills, N. J., by two hay-racks and the character of the crowd can be determined by the alacrity with which they all got into the hay-rack wagon. They had all, very evidently, been in such a rig before. We were first taken to the large, fine administration building, as it is called, but which contains also the grain storage; the basement is the incubator cellar and an ell to one side makes a brooding house for small chicks. In the commodious offices which are located in this fine cement and brick structure there was plenty

of room to leave our wraps, and as the day was warm many of the men divested themselves of their coats and vests and got down to something like working conditions so that they felt more at home on a poultry farm. Then about 10 a. m. began the tramp over the 241 acres, almost all of which was in use as poultry yards. It took until after midday to cover the buildings and yards on what are known as Rancocas Farm. We saw about 51,000 fowls, young and old, which I feel sure is the largest number on any farm in this country. It would take a book to tell all that we saw that forenoon, and a book is published giving in detail the layout and description of these houses and yards of this farm.

After visiting every part of these poultry yards and houses, we were again loaded on the hayracks and driven to the lawn in front of the residence, where we found tables under the spreading trees loaded with good things to eat. Our early morning get-away from Atlantic City and the tramping we had done prepared us to fully appreciate a good dinner. And if "actions speak louder than words," then the host and hostess must have understood that we appreciated their hospitality.

Almost before we had time to let our hearty meal settle we were again loaded onto the hayracks and driven to "Quality Farm," which is located farther up the road from the depot, on which are kept the high quality breeding birds, both White Leghorns and White Rocks. The birds we saw there would fill any fanciers of these breeds with envy. Practically every bird which we saw running around on liberal free range was of the purest whiteness, and all looked strong, vigorous and healthy. The birds here are under the immediate charge of Mr. Chapman, and their fine condition speaks volumes in favor of their caretaker.

While there were not as many fowls on this farm as on Rancocas, yet it took more time for the illustrious poultrymen in the party to see them. Almost every specimen required time for admiration and before the view of all was really satisfied the call rang forth "You must hurry to catch the 4:20 train." Thus we had spent over six hours viewing these birds in flocks ranging from 500 to 1,500, and had only time to give them a casual glance.

The college men went to New Brunswick, N. J., where they were to have a two days' session discussing poultry raising matters, and as our destination was a few miles beyond we went along with them. I heard more than one of them say, "It was the most delightful and instructive day they had ever experienced."

This farm and the results are worthy tablets to the ability of Mr. Joel M. Foster. We realize that he does not claim all of the honor and is willing to share it with his assistants; but his is the master mind and he deserves credit for the ability of choosing proper assistants. In a general way we might say that on Rancocas Farm the houses are divided into clusters of three and one attendant is placed in charge of such group of three and held responsible for results. Of course he works under a general superintendent, but it is his prime duty to see that everything about these houses are in proper condition. In two of the houses are between 500 and 600 laying hens and in the other one he is given in the spring 1,500 day-old chicks to brood and care for. If the books at the end of the year show that his hens average over twelve dozen eggs a year and if he succeeds in rearing a certain percentage of the young chicks, he is paid a bonus of \$100 over and above his regular salary. This plan is one of the secrets of success of this farm and might be used successfully elsewhere.

**Wet grounds—no game—until you read the back inside cover—its good**

## Good Things for Everybody

Helen T. Woods  
Editor

**M**ANY GREAT AND useful truths have been discovered from time to time and brought to the attention of unthinking mankind, but none more weighted with worth than that of the great importance of fresh air and sunshine to all living creatures. Here we have two of mankind's choicest gifts, which, because of their freedom to all, are classed by many as worthless possessions.

Everywhere we hear men and women complaining of the same round of duties which confronts them day after day. Life itself becomes monotonous since they put so little that is new into it. Out of doors in Nature's great storehouse are millions of things waiting to interest them, not one of which but would admit of a lifetime's study, and still much to be learned. Give a healthy, wide-awake child a life in the open. Let him learn to know and love the trees, the flowers, the birds, the sky, the sun, and the stars at night, and give him the opportunity to find out about these things, and he will have educated himself to be a far more useful and helpful citizen than any which the indoor schools turn out. Let him night after night watch that great sun, with its marvelous beauty of color, sink into the western horizon, and the stars that one by one appear, silent and regal in their marvelous beauty, as they dot the canopy of the heaven. Let him again watch the first tints of the dawn, the breaking away of the night, the first faint rosy glow of that same sun whose glory filled the whole western sky but a few hours before. Let him learn to know and love the twitter of birds as they nest in the tree-tops about him. Let him while yet a

little child awake to the marvels and beauties of the world in which he lives, and you will have opened a book of happiness before him whose interest will never lag and whose influence will be only for those things that are good and pure and true.

Probably a few thousands—perhaps only hundreds—of years ago, our ancestors were as opposed to the use of water as many today are opposed to open-air living. Get into any public conveyance and the fact is soon proven that the vast majority of people are afraid of good, pure air, since a little stream of it coming from an open window will soon be the cause of having the window closed. They cling to the warm air, no matter how vile, as it must necessarily be, when breathed over, and over. The task of giving this class of citizen an airing is about hopeless during the cold weather, but at this season of the year there is no need to fear "drafts" and "sudden changes."

The best thing that any of us can do, when tired and weary in spirit, when things grow monotonous and dull, is to get out into the open and see what is going on there. There is no better season than now. A thousand and one strange and wonderful things await you. The great out-of-doors has the most wonderful and permanent effect upon the character and the lives of those who live in it. If you are restless and dissatisfied, if the dread neurasthenia is clutching at your vitals, get out of doors, for no other treatment can produce so calming an influence as can Nature, when her tired children come to her for rest.

If there is anything that has helped womankind in her onward march toward progress, it is the realization of the uselessness of being tied down to the care of an immense house. A house is all right in its place, but the whole of a woman's life should not be spent therein. At least a great many of us are now conscious of the fact that the great out-of-doors, Nature's gardenland, is much freer and healthier and better for us. So we now have sleeping porches, and tents, and days in the woods, and we are not afraid of the "night air" as containing some deadly poison, as was once believed. A friend wrote us last summer that she had only just begun in her seventieth year to know what real living means. She wrote:

"To wake up in the morning so alive to the beauties of life and so

refreshed from healthy slumber makes me feel like a child again. I began the outdoor living in June last year, and I loved it so from the start that I wanted to do something to institute perpetual summer. I could not bear the thoughts of giving it up. Italy or the south of France, or even California or Florida, were not within my range of possibilities.

"Well, when the frosts of autumn came I put on more blankets. When snow piled in fleecy drifts about the floor of my outdoor retreat, I put on more blankets, a sweater, woolen night clothing, and slept the sleep, if not of the blest, of one who could at least appreciate the blessings of good air and sunshine. On clear days, all summer and winter, the bedding is bathed in sunshine and air (than which there are no better purifiers), and I've decided that if I could live seventy years in the old way, I shall live at least twice that in the new. At any rate, I am now living a fuller and more enjoyable life than ever before."

From those who have tried out-of-door living by night or by day, or both, we hear only the most enthusiastic approbation of it. In mosquito-ridden countries, for sleeping out of doors, there must be provided some protection from these pests, and the same is true of eating out of doors where flies swarm. The main thing is to get people in the habit of enjoying life in the open; the rest, such as freedom from flies and mosquitoes, will come in time. A personal war against these pests will hasten the day. It is your fight as well as mine, so let us all be on the warpath.

There is no need to allow life to become one round of monotony. The appreciation of things beautiful out of doors will give you an insight into things that can be gotten in no other way. Everywhere around us are fields and woodland, beautiful in their attractive attire; wide-viewed hilltops and peaceful valleys where the shimmering water of some brook or pond stretches before you. None of us should be so tied down, so busy, so overworked, that we cannot get out from the brick walls and noise and dirt of the city to enjoy what the gods provide. You do not need to have an automobile to reach the open fields and leafy lanes. A little ride on the trolley car will land you at some garden-spot "far from the madding crowd," where you may rest and enjoy more in an afternoon than you could in a month in town. If you have no week days free from toil, Sunday was made for just such appreciation of God's handiwork, and in no other way can we so easily be made to feel the eternal wisdom and justice; and that happiness is the right and privilege of every human being.

The world awaits; your enjoyment of her beauties. Get out into the open and learn how to live.

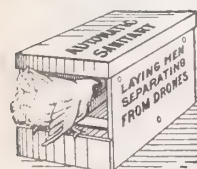

**BROWN POULTRY FENCE**

Costs less than cheap netting, lasts 5 times as long. Top wire 9-12 gauge, bottom wires 1 inch apart—all heavily double galvanized. Rust proof, stock strong, chick tight. Sold direct from factory, freight prepaid anywhere. Mail postal now for free book and sample to test.

Address: **THE BROWN FENCE & WIRE CO.**  
Department 8 - CLEVELAND, OHIO

**FREE BOOK DESTROY VERMIN**

Drop us a post card for our FREE BOOK telling all about our most effective method of killing LICE, ROACHES, BED BUGS, etc. Our method is now in use by over 6,000 hotels and institutions. Write for FREE BOOK. The Insectolene Co., Dept. P, Box 113, Chicago, Ill.

### Automatic Sanitary Trap-Nest

Made of sheet metal, vermin proof, strong and durable. Requires no attention. Operated exclusively by hens, separating layers from drones. Cheapest, best, simplest. Write for free booklet or agency. Mention Am. Poultry Journal.

# Questions and Answers

Conducted by  
Prince T. Woods, M. D.

## Drugs to Force Growth.

Q. I have had half a dozen years' experience in rearing chickens with hens and about two years with commercial incubators and brooders. I am having fairly good success. I have a splendid market for 2-pound broilers, being located in a good residential district. Later I expect to get a small farm and devote all of my spare time to it. Do you think it possible to hurry the growth of the young chicks by drugs, since no thought need be given to spoiling the reproductive organs, as all chicks would be marketed as soon as they weighed two pounds? Is it possible that by feeding a solution of lecithin the growth could be hurried—or by feeding any other dope?

Any suggestion for experimental work in this respect will be welcome. So long as the flesh is not harmed or its flavor destroyed, it seems to me that something might be done along this line.

Pittsburgh, Pa.

J. A. C.

A. We would not try to feed dope of any kind to chicks in an attempt to force growth. The results are not likely

to pay you, and you may pay dearly for your experience. By good management and good feeding you can push chicks to two pounds' weight in eight to ten weeks, and you can grow them to eight to ten pounds each in twenty-two to twenty-four weeks. You can't ask for anything better than that. You will find advice on feeding in book "How to Raise Chicks," to be obtained of our Chicago office at 75 cents per copy. Wholesome grain, green food and good beef scrap will make the best flavored chicken meat and when properly fed will do it in the shortest possible time.

## Red Feathers in Black Minorcas.

Q. Will you kindly favor me with an explanation of the presence of red feathers (fairly profusely) in both the neck and saddle plumage of a pure-bred Black Minorca male. This variety has been my favorite fancy, and I have been breeding these birds for some nine years. Until last season I never produced such a specimen, and while I am aware that the red feathers are regarded by some experts as an indica-

tion of stamina (fully borne out in the case under consideration), and that such cockerels are said to be the best pullet breeders, there is a good deal of doubt expressed in these parts regarding such solution and the purity of my birds is impugned, notwithstanding that I am able to say, without fear of contradiction, that no foreign blood has ever been introduced into my yards that would account for it, for the reason that my birds are always in close confinement, and moreover no other breed is kept.

By way of experiment I have obtained a brood of chicks this season from one of the hens mated to the male referred to as having red feathers in hackle and saddle. In almost every case the feathers of the progeny are brown laced and on some it is quite pronounced. These chicks are only five weeks old. Will the feathers moult out black in both pullets and cockerels, and would these birds be safe to breed from?

Sea View, Natal.

W. B. H.

A. Here is an interesting case, and

## Just As Usual

Our customers who purchased early exhibition birds this fall are reporting they won first prizes. All we can say is

## We Told You So

Now, if you are in need of a show string or a bird to fill out your string we can supply you at prices very reasonable when you consider quality.

## The World's Best Strain of White Wyandottes

are acknowledged to be superior to all others, their winning record has no equal and no breeder has given as much attention to the utility requirements (meat and eggs) as we have. While we breed for exhibition purpose we never neglect or overlook the laying qualities of our breeders.

Never before have we had such a grand lot of youngsters, some now in the pink of show condition. We are confident they can win in any competition.

Let us send you a copy of our catalog, the most instructive book ever issued on poultry; it will give you more valuable information than you can get elsewhere, based on twenty years' experience. It is mailed for twenty-five cents in stamps or coin. Send for one today.

## J. C. FISHEL & SON

Box J, Hope, Indiana

we would like to hear from experienced Black Minorca breeders on the subject. Our own personal experience with Black Minorcas is limited, and we would like to hear from those who are qualified to speak with authority on this matter. From our own experience and observation of black fowls, we know that a few red feathers in a black bird are not necessarily a serious matter or any indication of impurity of blood. In plumage of birds and fowls the black is closely related to red coloring, in fact it is quite well known that it takes some black to carry and beget good red color. A few red feathers occurring in some specimens of a normally all-black breed may only be evidence of atavism. The probability is that it would occur most frequently where different strains of the same variety are crossed, or

where a closely line-bred strain received an infusion of more distantly related blood. In fact, any "shock" in the mating, which resulted in the production of certain very sturdy and vigorous specimens in the progeny, might easily carry along with it certain off-colored feathers, inherited from some quite remote ancestor.

The only way to tell how the chicks, with the brown lacing, will moult out is to wait and see. We should keep the pullets of this lot of chicks and breed them to a good solid black cock and watch developments. The sire of these chicks might well be mated to another good black hen and results observed. If, as reported, he possesses remarkable stamina it might be well worth while to make use of his procreateness. With a little time and patience it

ought to be easy enough to breed out the off-colored feathers. Health, vigor and stamina are qualities well worth preserving. We will be pleased to have further reports from this flock.

#### House Alterations.

Q. I have a closed poultry house which I intend to convert into an open-front house. It is now covered with hard finish roofing on sides and Amatite on roof, and it sweats and frost collects on cold nights. This makes it damp in winter and I want to get rid of the sweating. I would like to clapboard or shingle the sides, and want to know if it will be all right to do so over the paper that is now on. G. E. L.

Bennington, Vt.

A. Converting the house into an open-front building with a sufficiently

# FRENCH'S POULTRY MUSTARD

Absolutely Pure

The Original Poultry Mustard

Pat. Applied For

## For the Laying and Show Season

value. It insures an increased egg yield. It helps the moult—makes it quicker and more natural and the hens get to laying right quick. It is beneficial and insures the richest plumage, and keeps the birds toned up at all times to show at their true worth. It is used by the leading breeders and highly endorsed by thousands.

Condition your stock by using "French's Poultry Mustard."

There is nothing to equal it in

### Old and Young Thrive On It

Experiments here and in England have proven its value. It is used and recommended by thousands of poultrymen. It is not the amount of food a hen eats, but the nutriment she extracts from food by the digestive process that supplies all nature's demands and produces eggs. It is sold the world over—here is a partial list of the principal dealers handling it. If your dealer does not have it send us his name.

### BEWARE OF IMITATIONS

Insist on Having  
French's Poultry Mustard  
Sold in Sealed Packages Only

### FRENCH'S POULTRY MUSTARD

is sold at 20 cents per pound in six and ten-pound boxes and 25-pound kegs. Sample package, 1½ pounds 35 cents. A trial order will convince you. Write for it today. Poultry pays best and does best when French's Poultry Mustard is regularly used. A teaspoonful to six to twelve fowls fed daily in wet or dry mash. Booklet for the asking.

The R. T. French Company, Dept. A, Rochester, New York

large part of the front kept open at all times (no curtain of any sort used) will undoubtedly stop the "sweating" and dampness. The Amatite roofing is all right. The roofing on sides can be left on if you wish and either shingled or clapboarded over. However, all the fabric needed under the shingles or clapboards is common waterproof building paper at the corners and under joints about windows and doors. Use ¼-inch mesh wire netting to cover the open front. Ordinary galvanized "cellar window screen" is what you want. This will turn snow and storms sufficiently for all practical purposes and allow abundant fresh air day and night.

#### Red Mites.

Q. Not seeing anything about red mites, I write to ask how to exterminate them. Have tried many things, but with no results. They are not only in the houses, but are in the runs, and a paper laid on the ground will be covered in no time. I am not troubled with poultry diseases or lice, but the mites get more and more troublesome until I am discouraged.

L. B. R.

Seattle, Wash.

A. There is no poultry pest that breeds more rapidly or is more troublesome than the red mites. If there are pigeons flying free about your place you will have to be constantly at war with the mites, for the pigeons will bring them to you from infested lofts almost as fast as you clean up the place. Any good liquid lice killer sprayed freely about the poultry house with a good compressed air spray pump will prove an effective mite killer if the work is thoroughly done and the woodwork, roosts and all cracks are well sprayed. It is well to follow this in a few days by spraying with freshly-made whitewash. Whitewash sprayed or sprinkled well about the runs will get rid of the pests there. You may have to dip your fowls in a weak solution of cresol disinfectant, about one tablespoonful of cresol in a gallon of soft water makes

an effective dip. A good mite killer spray can be made by dissolving about one pound of crude naphthalene flakes in a gallon of kerosene.

It will not do much good unless you are thorough and spray house, runs and dip the fowls, for with the mites as abundant as you report them, every crack and cranny is loaded with them and the plumage of the fowls is probably alive with them. These pests are much worse in some sections of the country than in others. In our present location just a brief period of neglect on the part of the caretaker and the pests put in an appearance in hordes so great as to be unbelievable to the uninitiated. Sandy locations and dry seasons appear to favor rapid breeding of this pest.

#### Sex of Geese.

Q. I have three goslings, just feathered out. Two have rather pink bills and legs and one has bright yellow ones. All are feathered just alike. All have brown eyes. One has a coarse voice, another a fine voice and the third is silent, but when it does make a noise it is between the two. Have been told that

ganders always have blue eyes, is this so? How can I tell the sex of these goslings? They are Toulouse.

Samson, Mo.

E. K.

A. Bills should be a pale orange color. Shanks and feet should be deep reddish-orange. It is too early to consider the color. Wait until they mature. Eyes should be brown or hazel.

You can't tell the sex of geese by the voice. Color of eyes has nothing to do

## Knowledge is Money

OCULUM is selling in every continent and state. It cures the worst poultry diseases almost instantly. One Bottle produces more eggs than anything known. Sold by dealers or direct at \$1.00 or 50 cents. Money back, if unsatisfactory. \$1 bottle will last 50 chickens 1 year. Postal brings knowledge.

OCULUM, Box B, Salem, Va. Agents wanted.

### DIRK'S RED MITE KILLER

One application kills all mites and prevents their reappearance during the season. Keeps fowls free from body lice. Makes scaly legs bright and clean. Keeps lard, pastry and sweets free from ants. Write today for special trial price.

M. E. DIRK, Box 102, North Baltimore, Ohio  
Marshall & Marshall, Niagara Falls, Ont., Distributors for Canada.

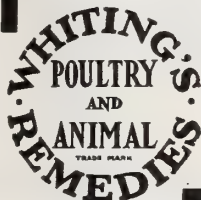

# Whiting's ROUPENE

#### Actually Does Cure Roup

Even the worst cases, even Diphtheritic Roup and Canker. We don't care how bad the case is so long as the bird is not in the last gasps of death.

**ROUPENE will cure** and leave no weakening or bad after effects in the bird or its progeny. Just try it once. Pick out a bad case, one on which you have tried other so-called remedies, and we guarantee a cure or refund money.

Whiting's **ROUPENE** is a genuine disease germ destroyer. It takes right hold and cures without fuss or delay.

#### ROUPENE Prevents Contagion. You Do Not Have to Quarantine the Diseased Birds

**ROUPENE** not only cures Roup, Canker and Diphtheritic Roup, but it also cures Sorehead, Limberneck, Colds and Pip—all diseases of the breathing organs. 50 cents and \$1.00 per bottle.

All dealers, or mailed by us on receipt of price. Send for free printed matter.

O. K. Company, Dept. 29, 157 Water Street, New York City, New York

## RANCOCAS

# S. C. W. Leghorns and White Ply. Rocks

LIKE A HURRICANE SWEEP ALL BEFORE THEM  
AT THE NEW YORK STATE FAIR, 1913

### Rancocas S. C. White Leghorns

In the largest and best class of Leghorns with 286 birds competing our exhibit made the best record ever made at this great and popular exhibition. They win pen old, first; pen young, first; cock, fourth; hens, first, second, third, fifth; cockerels, first, second, third, fourth, fifth; pullets, first, second, third, fourth, fifth; first display; first collection; shape and color specials and the "Manning championship silver cup" for "best ten birds at the show" with a total of 5,644 birds competing.

### No Record of Any Line Equals this Astounding Victory

### Rancocas White Ply. Rocks

In a class of 106 birds exhibited by the leading breeders of the East and West, we won a pronounced victory. Old pen, second; young pen, second; cocks, third and fifth; hens, first and fifth; cockerels, first, second, fourth; pullets, second, third, fourth; best display and specials. This class was pronounced by prominent breeders the best ever seen at this season of the year with rare quality and condition features.

### The Rancocas Strain

Combines the choicest quality practical value. It is the "strain" to bank on for success. With our large stock we are prepared to supply the grandest exhibition birds and the choicest quality breeders with absolute satisfaction assured. Write us your wants and let us quote prices.

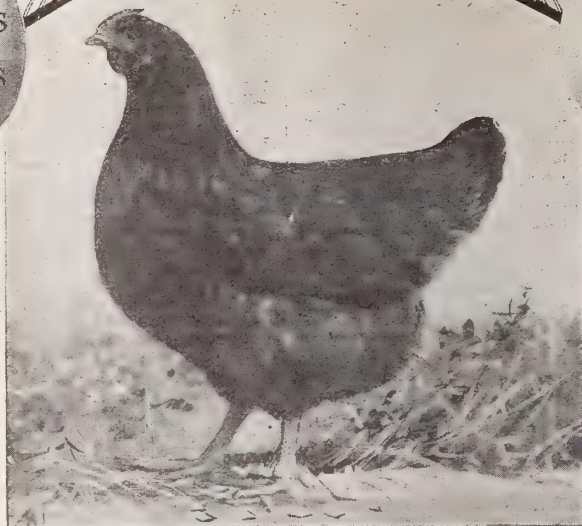

### Special Prices

Now for carefully mated trios and pens and yearling breeders. Circulars and further information on request. Remember "Rancocas stands for quality."
